

Paushak Ltd

Concall Tracker · Q1 FY2027 (quarter ended 30 June 2026) · NSE: PAUSHAKLTD · BSE: 532742 · Report prepared 3 Aug 2026

Not investment advice. Do your own due diligence. An AI-generated reading of the company's own annual reports, exchange filings, credit-rating rationales and public financials.

1 Snapshot

What the business does: Paushak is India's largest maker of **phosgene**-based specialty chemicals. *Phosgene* is an extremely toxic gas — it was used as a chemical weapon in the First World War — but it is also an exceptionally useful chemical building block: react it with other molecules and you get intermediates that go into medicines and crop-protection products. Paushak makes four families of these — **chloroformates, isocyanates, acid chlorides and carbonates/carbamates** — and sells them mainly to Indian pharmaceutical and agrochemical manufacturers, who use them as ingredients further down their own production chains. Everything is made at one site, Panelav in Halol, Gujarat. The company is part of the **Alembic group** (the Vadodara pharma family); the holding company Nirayu Private Limited owns 41% directly and the promoter group 67% in total. The barrier to entry is regulatory, not technical: because phosgene is so hazardous, you need a specific industrial licence from the central government to make it, and very few Indian companies hold one.

Measure	Value	What it means in plain words
Market cap	₹1,610 cr	What the whole company is worth on the stock market — a small-cap. The share is ₹653, against a 52-week range of ₹991–342.
FY26 revenue	₹218.6 cr	Sales in the year to March 2026, up 3.6% on FY25's ₹211.0 cr. Revenue has gone ₹212 → ₹206 → ₹211 → ₹219 cr over four years — essentially flat.
FY26 net profit	₹39.3 cr	Profit after all costs and tax. Down from ₹49.4 cr in FY25 and ₹54.4 cr in FY24 — three straight years of decline .
FY26 operating margin	28%	28 paise of operating profit per rupee of sales, before interest, tax and depreciation (that measure is called EBITDA). Healthy in absolute terms, but down from 36% in FY22.
Q1 FY27 revenue	₹83.6 cr	The quarter this report is about. Up 49.5% on ₹55.9 cr a year ago — the largest quarter in the company's history.
Q1 FY27 net profit	₹15.1 cr	Up 25.5% on ₹12.0 cr. Note the gap: revenue grew twice as fast as profit.
Gross fixed assets	₹466 cr	The cost of all the plant and buildings the company owns. It was ₹210 cr a year earlier — the asset base more than doubled in a single year.
Borrowings (Mar 26)	₹77 cr	The company was debt-free for its entire modern history until FY25. It has now drawn ₹75 cr of term loans to pay for the new plant.
ROCE (FY26)	8.3%	Return on the capital employed in the business. Was 21% in FY23 and 17% in FY24. This is the single worst number in the report — a lot of money is in the ground and not yet earning.
Stock P/E	38x	The share price divided by last-twelve-month earnings per share. Expensive for a company whose profits are falling.

No concall transcripts were available on Screener — this report is based on a global web deep-dive.

Paushak has never held an earnings call. A *concall* (earnings conference call) is the quarterly call on which a listed company's management presents results and then takes live, unscripted questions from analysts. Paushak does not hold one, does not publish an investor presentation, and does not issue an earnings press release. Screener.in's page for PAUSHAKLTD was checked twice for this report — once by the automated scraper and once directly — and it carries no "Concalls" heading at all; the word "Transcript" appears zero times. Screener holds only two document sections for this company: **Annual reports** and **Credit ratings**. This is not a gap in the data; it is a fact about the company. **Everything below is therefore built from written primary sources, not from management's spoken words, and there is no analyst Q&A record anywhere in which management has been pressed on anything.** Section 4's consistency read is weaker than a transcript-based one for exactly that reason, and it is scored accordingly.

Source	Date / period	What it was used for
Annual Report FY2025-26	y/e Mar 2026	Directors' Report, Management Discussion & Analysis (the section of an annual report where management explains the year and gives its outlook — abbreviated MD&A), full audited accounts, related-party table, BRSR sustainability disclosures.
Annual Report FY2024-25	y/e Mar 2025	MD&A commissioning promise, export split, prior-year comparatives.
Annual Report FY2023-24	y/e Mar 2024	MD&A Phase-I / Phase-II expansion commentary, export split.
Q1 FY27 results filing	30 Jul 2026	The latest quarter — audited-reviewed statement of unaudited results.
Q4 & FY26 results filing	5 May 2026	Full-year numbers, dividend, cash flow.
Reg-30 filing: commencement of commercial production	21 Jan 2026	The single most important disclosure in this report — the new plant's cost, phasing and (non-)disclosure of capacity.
Reg-30 filing: credit rating on enhanced limits	15 Jan 2026	Current rating and the size of the bank facilities.
CRISIL rating rationales	Oct 2023, Jan 2025	Capex quantum and timing, margins, liquidity, and the rating triggers CRISIL set. Used as the substitute for management guidance.
Screener.in financial history	FY15–Q1 FY27	Profit & loss, balance sheet, cash flow, ratios, quarterly results, shareholding.
Trade press & analyst coverage	2020–2026	Industrial-licence amendment (2020), MPP8 groundbreaking (Nov 2023), Q1 FY27 result commentary.

One accounting note. Paushak has no subsidiaries, joint ventures or associates and reports a **single business segment**. There are no consolidated accounts and therefore **no standalone-versus-consolidated discrepancy** anywhere in this report — every figure is on the same basis. Separately, the share count changed in FY26: each ₹10 share was split into two ₹5 shares and then a 3-for-1 bonus issue was made (bonus shares listed 7 Oct 2025), taking the count from 30.8 lakh to 2.47 crore shares. All per-share figures here are on the post-bonus basis, as the company restated them.

★ Latest update highlights — Q1 FY27 (results filed 30 July 2026)

- **The biggest quarter the company has ever had.** Revenue ₹83.55 cr against ₹55.88 cr a year ago — up **49.5%** — and up 51.5% on the ₹55.14 cr of the preceding quarter. Operating profit (EBITDA) of ₹25.65 cr is also an all-time high. *Source: Q1 FY27 results filing, 30 Jul 2026.*
- **The cause is identifiable and it is the new plant.** Paushak told the exchanges on **21 January 2026** that it had begun commissioning a new **Multi-Purpose Plant costing about ₹175 crore**, to be brought up in phases "over the next 12 months." Q1 FY27 is the first full quarter with that plant contributing. *Source: Reg-30 filing, 21 Jan 2026.*
- **Margins held, which is the genuinely good news.** Operating margin was 30.7%, against 31.9% a year ago — the company added half again as much revenue without buying it with discounts. *Source: computed from the Q1 FY27 filing.*
- **But profit grew only half as fast as sales.** Net profit rose 25.5% to ₹15.10 cr while revenue rose 49.5%. Depreciation more than doubled, from ₹4.06 cr to ₹8.42 cr a quarter, and interest went from ₹0.04 cr to ₹1.36 cr — the cost of the new plant is now running through the profit and loss account in full. **On an annual basis those two lines together now cost roughly ₹39 cr, versus ₹22 cr in FY26.** *Source: Q1 FY27 results filing.*
- **Raw-material cost jumped far faster than sales.** Cost of materials consumed went from ₹10.86 cr to ₹28.99 cr — from 19% of revenue to 35%. The new volume is in a lower-gross-margin product mix; what saved the overall margin was that fixed costs (staff, ₹9.66 cr, essentially flat) were spread over much more output. *Source: Q1 FY27 results filing.*

Business mix & capacity. Domestic vs export (FY26): domestic sales ₹179.4 cr, exports ₹37.7 cr — an **82.6% / 17.4% split**, and the company separately states exports were **17.54% of total turnover**. *Plain read:* this is overwhelmingly a supplier to Indian pharma and agrochemical factories, not an exporter. **The direction matters more than the level.** Exports were ₹46.6 cr in FY23, then collapsed to ₹27.1 cr (FY24) and ₹22.4 cr (FY25) before recovering to ₹37.7 cr in FY26 — **still below where they were three years ago**. Meanwhile **domestic sales actually fell in FY26**, from ₹187.2 cr to ₹179.4 cr. *Plain read:* all of FY26's growth came from exports rebounding off a depressed base, while the four-fifths of the business that is domestic went backwards. **Capacity — licensed:** phosgene capacity is licensed at **14,400 tonnes per year**, raised from 4,800 tonnes when the government approved an amendment to Paushak's industrial licence in August 2020. That licence is the moat. **Capacity — downstream, and utilisation: NOT DISCLOSED.** This must be said plainly. Paushak publishes **no** tonnage figures for its derivative plants and **no** utilisation percentage — not in the annual report, not in any filing. When SEBI's rules forced it to state capacity in the 21 January 2026 commissioning filing, the company wrote "Multiple upstream and downstream manufacturing facilities" in the capacity box, "Most of the facilities are optimally utilized" in the existing-utilisation box, and "NA" in the proposed-utilisation box. *Plain read:* the company will not tell you the denominator, so nobody outside can calculate how much room is left. No number is offered here because none exists in the public record. **What can be measured:** gross fixed assets went from ₹209.6 cr to ₹466.1 cr in FY26 as ₹257.6 cr of construction-in-progress was switched on. *Plain read:* the productive asset base more than doubled; on that alone the plant should support far more than ₹219 cr of sales. **Customer concentration:** the FY26 accounts state that **no single customer contributed 10% or more of revenue** in either FY26 or FY25. *Plain read:* no one buyer can sink the business — a genuine strength. **Safety and regulation:** lost-time injury frequency **nil**, fatalities **nil**, in both FY25 and FY26; no fines, penalties or regulatory action disclosed. *Plain read:* for a phosgene handler this is the number that protects the licence, and it is clean.

★ 3. Earning-trigger thesis

The thesis is simple and, unusually for a no-concall company, it is checkable. Over FY25 and FY26 Paushak spent about **₹257 cr** on a new multi-purpose plant, an R&D complex and supporting utilities — plant and construction-in-progress together went from ₹235 cr in March 2024 to ₹492 cr in March 2026 — more than doubling its asset base while revenue stood still at around ₹210 cr. That crushed the returns — ROCE fell from 21% to 8% — because the money was spent and the plant was not yet running. The plant began commercial production in **January 2026**. **Q1 FY27 is the first evidence that the spending is turning into sales: revenue up 49.5% to a record ₹83.6 cr with the margin intact.** That is a real trigger with one quarter of hard proof behind it. Three things stop it being a slam dunk: the company's own filing says a chunk of the ₹175 cr was *replacement* of legacy plant rather than new capacity, no capacity or utilisation number is published so the size of the prize cannot be sized, and the depreciation and interest the plant brings with it consume roughly ₹17 cr a year of extra cost that the new sales must first cover.

Trigger	What the public record says	Evidence so far	Time horizon	Strength
New Multi-Purpose Plant (MPP8) ramping up	Reg-30 filing, 21 Jan 2026: ~₹175 cr, commissioning "in a phased manner... over next 12 months." Groundbreaking was Nov 2023. FY26 MD&A: benefits "expected to accrue progressively."	Strong and immediate. ₹257.6 cr moved from construction-in-progress into live assets in FY26; Q1 FY27 revenue +49.5% to a record, margin held at 30.7%. This is the trigger firing.	Now → 4–6 quarters	Strong The only item here with hard proof.
Operating leverage on a doubled asset base	Never quantified by management. CRISIL's Jan-2025 upside trigger was "operating profitability sustaining at 30% with revenue growth."	Q1 FY27 delivered exactly that combination — 30.7% margin on +49.5% revenue. But one quarter is one quarter, and raw-material cost as a share of sales jumped from 19% to 35%.	2–4 qtrs	Moderate Met CRISIL's bar once; needs repeating.
Export recovery	FY25 MD&A: aim to "strengthen our presence in the Global chemicals market." FY26 MD&A: "developing relationships with key global players."	Exports ₹22.4 cr → ₹37.7 cr (+68%) in FY26, and they carried the whole year. But they are still below FY23's ₹46.6 cr, so this is recovery, not expansion.	1–3 yrs	Moderate Real but unproven; no customer or geography named.
Phosgene licence as a moat	Licensed capacity tripled to 14,400 t/yr in 2020. Zero safety incidents and zero regulatory penalties in FY25 and FY26.	Durable and intact. This is why Paushak earns 28–35% operating margins on a commodity-adjacent product at all. It is a defence, though, not a growth driver.	Structural	Strong But it protects margin, it does not create growth.
Domestic pharma / agro demand	All three MD&As describe the opposite: "pricing pressure... on account of aggressive imports from China," "global overcapacity," "significant price erosion."	Negative. Domestic sales <i>fell</i> from ₹187.2 cr to ₹179.4 cr in FY26. Chinese oversupply has been named as an unresolved headwind for three consecutive years.	Unresolved	Weak / headwind This is working against the company, not for it.
"Replacement" caveat	Reg-30 filing, 21 Jan 2026, rationale: <i>"Replacement of legacy manufacturing facilities as well as capacity enhancement."</i>	An unquantified share of the ₹175 cr buys no extra output at all — it replaces plant that was already producing. Management has never split the two.	—	Discount factor Reduces the size of the prize by an unknown amount.

4 Management consistency scorecard

Read this first. Every "promise" below is drawn from a written document — an MD&A, an exchange filing, or a rating agency's summary of what management told it. None comes from a live call, and none was ever tested by an analyst asking a follow-up question. Management has also never issued a numerical forecast of any kind. That makes them very hard to catch out, and it makes this scorecard less demanding than a transcript-based one would be. Treat a "Delivered" here as a lower bar than usual.

Period	What was promised	What actually happened	Verdict
FY24 AR (May 24)	Phase-I expansion "onstream"; FY24 saw "better utilisation of its plant capacities as compared to FY23 and increased sales volume."	Revenue <i>fell</i> 3%, from ₹212 cr to ₹206 cr, and operating margin fell from 35% to 31%. Volume may well have risen; the money did not. To their credit they flagged the price erosion causing it in the same paragraph.	Partly
FY24 AR (May 24)	"Begun its Phase-II expansion to establish global scale plants for a few more products."	Built. Groundbreaking at Panelav Nov 2023, commissioning began Jan 2026 — 26 months. The FY26 accounts state "there is no project under Capital Work in Progress with time/cost overrun."	Delivered

CRISIL Jan 2025	Capex of "₹240 crore over fiscals 2025 and 2026," funded by internal accruals and debt.	Broadly on plan. Cash spent on investing was ₹57 cr in FY25 and ₹95 cr in FY26; ₹257.6 cr of construction was capitalised in FY26. Debt drawn was ₹25 cr then ₹50 cr — ₹75 cr in all, more than "internal accruals" implied but well within the rated facilities.	Delivered
FY25 AR (May 25)	"Our ongoing projects are on track for commissioning in FY26."	Met, but only just — commissioning was announced on 21 January 2026, in the final quarter of FY26, and the MD&A then described the programme as "substantially implemented towards the close of the year." Phased ramp continues into FY27.	Delivered (late in the window)
FY25 AR (May 25)	"Through strategic product portfolio management, we enhanced capacity utilization."	Unverifiable — the company publishes no utilisation figure. What is verifiable is that FY25 profit fell from ₹54.4 cr to ₹49.4 cr and ROCE fell from 17% to 11%.	Unverifiable
FY26 AR (May 26)	Benefits including "stabilization of operations and improvement in capacity utilisation are expected to accrue progressively."	The first instalment arrived on time: Q1 FY27 revenue +49.5% to a record ₹83.6 cr. This is the one forward-looking statement in three years that has been immediately vindicated.	Delivered
FY24 → FY26 (cumulative)	Implicit throughout: that the expansion would restore growth and returns.	Over three years revenue went ₹206 → ₹211 → ₹219 cr (+6% in total), profit went ₹54.4 → ₹49.4 → ₹39.3 cr (–28%), and ROCE went 17% → 11% → 8%. Shareholders funded a doubling of the asset base and got three years of falling profit.	Missed
FY26 governance	No promise — but a fact that belongs in any consistency assessment.	Three operating heads in twelve months. The Whole-time Director & CEO resigned 2 Apr 2025; his replacement as Whole-time Director & COO resigned 31 Mar 2026 after under a year; a third Whole-time Director took over 1 Apr 2026. The Head of Works retired the same day. All of this spanned the commissioning of the largest plant in company history.	Red flag

Narrative drift. There has been remarkably little drift in *what* the company says, and that is partly because it says so little. The three MD&As tell one continuous story — build global-scale phosgene derivative capacity, replace ageing plant, add an R&D centre, weather Chinese oversupply — and the story has not changed direction once. Where the tone has shifted is in confidence. FY24 was expansive and promotional ("global technology leader in Phosgene and its derivatives," "creating a niche for us"). FY25 was brand-conscious ("we have revitalized the Paushak brand... our new logo, website"). FY26 is markedly flatter and more defensive, with new phrasing about reducing "dependence on spot local opportunities" and benefits accruing "progressively" — the language of a management that has learned to under-promise after two disappointing years. That is arguably an improvement in candour. What has **not** improved is disclosure: no capacity figures, no utilisation figures, no order book, no guidance, no investor presentation, no call. And one capital-allocation fact sits uneasily against the ₹75 cr of new borrowing: roughly **₹115 cr** of the company's investment portfolio — about a quarter of net worth — is parked in **unlisted Alembic-group companies** (₹68.8 cr in the parent Nirayu as equity and preference shares, ₹46.0 cr in Shreno Limited). Paushak borrowed to build its own plant while lending to its promoter group. The routine trading with group companies, by contrast, is small and benign — ₹6.4 cr of sales to Alembic Pharmaceuticals, under 3% of revenue.

Durable earning trigger? → YES — but early, and smaller than the headline

There is a trigger and it is firing right now. Paushak spent about ₹257 cr over two years, doubled its gross asset base to ₹466 cr, switched the new plant on in January 2026, and in the first full quarter afterwards delivered record revenue of ₹83.6 cr — up 49.5% — with the operating margin essentially intact at 30.7%. That is not a forecast, it is a filed result, and it is the clearest evidence in three years that the capital was not wasted. Add a real regulatory moat (very few Indian firms are licensed to handle phosgene, and Paushak's safety record is spotless), no customer above 10% of sales, and a balance sheet still only modestly geared at ₹77 cr of debt against ₹491 cr of book equity. **Three honest deductions.** First, the company's own commissioning filing says the ₹175 cr covered "replacement of legacy manufacturing facilities *as well as* capacity enhancement" — an undisclosed share of that money bought no new output, so the addressable uplift is smaller than the doubling of gross block suggests. Second, the plant carries about ₹17 cr a year of extra depreciation and interest, which is why profit grew 25% on 50% more sales; the new capacity has to work hard just to stop earnings per share going backwards. Third, four-fifths of the business is domestic and domestic sales *fell* last year under Chinese import pressure that management has flagged for three consecutive years and has no answer to. The trigger is real. It is worth watching for two or three more quarters before it is worth trusting.

Management consistent? → PARTLY — and the test itself is weak

On **execution**, they have done what they said. They said they would build Phase-II; they built it. They said it would be commissioned in FY26; it was commissioned in January 2026, inside the window, with the accounts stating no time or cost overrun. CRISIL was told ~₹240 cr over two years and the cash actually spent lines up. They said benefits would start accruing progressively, and Q1 FY27 duly arrived at a record. That is a builder's track record, and it deserves credit. On **outcomes**, the three years were a straightforward failure to deliver: revenue up 6% in total, profit down 28%, ROCE from 17% to 8%. And there are two things that stop this being a higher grade. The first is disclosure. Management has never published a capacity number, a utilisation number, an order book or a single quantified forecast; when SEBI's own template demanded a utilisation figure in January 2026, they wrote "most of the facilities are optimally utilized" and "NA." A company that never makes a checkable promise cannot be caught breaking one — that is not consistency, it is unfalsifiability, and it should not be rewarded as though it were the same thing. The second is the churn: three different Whole-time Directors ran the operating business inside twelve months, and the Head of Works left on the same day as the second of them, all while the biggest plant the company has ever built was being brought up. **The reader should weigh this verdict lightly.** With no earnings call, no investor presentation and no analyst ever able to ask a follow-up question, the evidence base here is a fraction of what a transcript-based assessment would rest on. A more sceptical reading of the same facts is entirely defensible.
