Acutaas Chemicals Ltd CONCALL TRACKER

Makes advanced pharmaceutical intermediates (the complex chemical building blocks that go into finished medicines), runs contract manufacturing for global drug innovators, and is adding battery and semiconductor chemicals. Formerly Ami Organics Ltd.

NSE: ACUTAAS · BSE: 543349 · Quarter folder: Q1-2027 · Builds on the Q4-2026 report · New call deep-read: Q1 FY27 (24 Jul 2026) · Figures: Screener.in (consolidated) and the call itself.

1. Snapshot

Acutaas earns most of its money (about 87% of FY26 sales) from pharma intermediates, including CDMO work. CDMO = Contract Development and Manufacturing: it develops and makes a molecule exclusively for one drug innovator under a long, sticky contract. The rest (about 13%) is specialty chemicals, which now includes battery-electrolyte additives and chip-making chemicals.

Number	Value	Plain-English read
Q1 FY27 sales (Apr-Jun 2026)	₹330 cr	Total sales for the quarter, up about 59% on the same quarter last year. Q1 is usually its weakest quarter, so this is a very strong start.
Q1 FY27 EBITDA / margin	₹113 cr / 34.3%	EBITDA = operating profit before interest, tax and depreciation. More than doubled year on year; 34 paise of each sales rupee is core profit.
Q1 FY27 net profit	₹75 cr	Take-home profit after all costs and tax, up about 70%. Grew a bit slower than EBITDA because last year's quarter had a large foreign-exchange gain in other income.
FY26 sales / net profit	₹1,324 cr / ₹366 cr	Last full year: sales up about a third, profit more than doubled.
Market value / P/E	₹31,035 cr / 67	Investors pay about ₹67 for each ₹1 of yearly profit. Very expensive: years of strong growth are already in the price.
Net cash (30 Jun 2026)	~₹314 cr	Cash in hand above any borrowing. The company is effectively debt-free.
Working capital	99 days (vs 91 in Q4 FY26)	Money tied up in stock and unpaid bills. It rose because inventory went up, a mild drag on cash.

2. Concall coverage

Period	Date	Transcript read?
Q3 FY22 → Q3 FY26 (19 calls)	Oct 2021 → Jan 2026	Carried forward from the Q4-2026 report
Q4 FY26 (year-end, prior boundary)	May 2026	Covered by the Q4-2026 report
Q1 FY27	**24 Jul 2026**	**Newly deep-read in full ★**

Only the Q1 FY27 call was read in full this quarter; the multi-year backstory comes from the prior report. Calls held after 30 Sep 2026 are outside this report's scope.

★ Latest concall highlights — Q1 FY27 (24 Jul 2026)

- **Strong quarter.** Sales ₹330 cr (+59% year on year), EBITDA more than doubled to ₹113 cr, net profit ₹75 cr (+70%). Plain read: the growth engine kept running even in a seasonally soft quarter.
- **Pharma side did the heavy lifting.** Pharma-intermediates sales ₹293 cr, up about 77%, helped by the main CDMO product plus new products picking up volume. Specialty chemicals fell about 11% to ₹37 cr as old commodity products are deliberately phased out.
- **Battery chemicals now selling.** Trial runs at the new Jhagadia plant are done and commercial supply has started, as promised for Q1 FY27. Management expects a quarter-by-quarter ramp to full use of the 4,000-tonne plant within about three years.
- **Guidance held.** About 25% revenue growth for FY27 with margins similar to FY26. The FY28 CDMO target of ₹1,000 cr was repeated, with management saying it is "confident to beat" it.
- **Tone:** confident and matter-of-fact. Gulf tensions disturbed raw-material supply at the start of the year, but management says supply was secured without hurting deliveries.

Business mix & capacity — quick facts

- **Segment mix:** Pharma intermediates ~87% / specialty chemicals ~13% of FY26 sales, expected to move to ~80/20 in three years as battery and chip chemicals grow. Segment margins: pharma ~36%, specialty ~24%. Domestic vs export split was not broken out on this call (last clear split, FY24: exports ~56%).
- **Capacity use (Q1 FY27):** Sachin (main pharma plant) 83%, Ankleshwar (Unit 2) 23%, Jhagadia (battery) 55%. Plain read: Sachin is nearly full, so management is looking for new land; Ankleshwar still has a lot of room and is expected to fill by about FY28.

★ Since our last report

Builds on the Q4-2026 report (boundary: Q4 FY26 call, May 2026). Prior verdicts: **Trigger YES** · **Consistency YES**.

Prior read	What we said then	What the new call shows	Movement
Earning trigger	CDMO + product-mix upgrade is a real, structural driver	Pharma sales +77%, gross margin up to ~58%, CDMO target reaffirmed and "to be beaten"	Confirmed
Consistency	Guides ~25% growth and beats it	Q1 grew +59%; FY27 guidance of ~25% kept, not raised	On-track
Battery chemicals supply from ~Q1 FY27	Plant inaugurated Jan 2026, no sales yet	Trial runs complete, commercial supply started; third product's plant to finish by end of Q2 FY27	Confirmed
Semiconductor (Korea JV, Indichem)	Revenue from FY27 onwards	Plant built ahead of schedule, but meaningful revenue now pointed to "next financial year" (FY28) with a slow start	Slipping (slightly)
Validated CDMO products	4 products validated	Revenue expected from H2 FY27; each could reach ₹50-100 cr a year at peak	On-track

Verdict change this quarter: both verdicts unchanged. The battery promise was kept on time, which strengthens the trigger; the chip-chemicals timing drifted a little later, but that was always the bonus, not the base case.

3. Earning-trigger thesis

What management says will grow profits

The core engine is the move from cheap commodity chemicals to high-value pharma intermediates and long-term CDMO contracts, anchored on one big oncology (cancer-drug) molecule. That shift has roughly doubled margins in two years, and this quarter showed it still compounding. On top, battery-electrolyte additives have just started selling with contracts in hand, a third battery product is being built, and chip chemicals follow from FY28. Management's job now is to keep growth near the guided 25% while the new businesses (which earn lower margins than CDMO) take a bigger share.

Trigger	What management said	Evidence so far	Time horizon	Strength	Change since last report
CDMO ramp (anchor oncology molecule + pipeline)	₹1,000 cr CDMO sales by FY28, "confident to beat"; 4 validated products start H2 FY27	Pharma intermediates +77% in Q1 FY27	Now → FY28	**Strong — already in the numbers**	↑ improving: target now framed as beatable
Margin upgrade (product-mix)	FY27 margin similar to FY26 (~36%)	Q1 EBITDA margin 34.3%, up nearly 10 points on last year	Playing out	**Strong — but guidance now says "hold", not "expand"**	unchanged
Battery chemicals (VC, FEC, + third product)	Full 4,000 t use in ~3 years; demand exceeds capacity; contracts with multiple customers	Commercial supply started in Q1 FY27; amount not disclosed	FY27 → FY29	**Moderate — started, size still unknown**	↑ improving: from "plant built" to "selling"
Semiconductor chemicals (BFC + Korea JV)	Korea plant capex done by end of Q2 FY27; revenue from FY28; full use in 3-4 years	BFC recovered; Korea R&D centre running; no JV revenue yet	FY28 → FY30	**Unproven**	↓ slightly later than the prior "FY27" hint

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
FY24 call	~25% growth in FY25; CDMO ramp from H2 FY25	FY25 grew ~40%; CDMO drove it	Delivered / Beat
FY25 call	~25% growth in FY26; better margins; battery plant in H2 FY26	FY26 grew ~33%, margin 36%, battery plant inaugurated Jan 2026	Delivered / Beat
Q3 FY26 call	Raised FY26 guidance to 30%, margin 32-35%	Met both	Delivered
Q4 FY26 call	~25% growth in FY27; battery supplies from ~Q1 FY27; chip chemicals from FY27	Q1 grew 59%; battery supply started on time; chip revenue now FY28	Delivered / Partly
Q1 FY27 call	FY27 ~25% growth with stable margin; third battery product capex by Q2 FY27; CDMO ₹1,000 cr by FY28	To be judged	Too-early

Narrative drift: very little. The same story (move up the value chain, then add battery and chip chemicals) has been told for three years and keeps being delivered. Two small things to watch: management again declined to split CDMO from the rest or give battery revenue numbers, so the dependence on one cancer-drug molecule stays hard to measure; and the margin guide has quietly shifted from "expand" to "hold steady", because battery products earn less than CDMO. Both are sensible, openly explained changes rather than a changing story.

5. Bottom line — two verdicts

Durable earning trigger? → YES vs last quarter: unchanged

Nothing moved this down, and one thing moved it up: battery chemicals went from "plant built" to "selling". The core CDMO and product-mix driver is concrete, under long contracts and clearly visible in a +59% quarter. Chip chemicals remain a later bonus. The main risks are outside the business: the heavy reliance on one anchor molecule, and a share price (P/E ~67) that already assumes years of strong growth.

Management consistent? → YES vs last quarter: unchanged

The battery promise for Q1 FY27 was kept on time, FY27 guidance was reaffirmed rather than walked back, and the plan has not changed shape. The slight push-out of chip-chemical revenue to FY28 and the refusal to break out CDMO numbers keep this short of perfect, but the track record of guiding conservatively and then beating it is intact.
