Sansera Engineering Ltd

Concall Tracker, Q1-2027 update · builds on the Q4-2026 report · new call read: Q1 FY27 (13 Aug 2026) · Report date 6 Nov 2026

What the business does: Sansera forges and machines precision metal parts in Bangalore and north India. Most of its money still comes from connecting rods, crankshafts and other engine parts for two-wheelers, cars and trucks, but a fast-growing slice now comes from aerospace, defence and semiconductor-equipment parts (it calls this "ADS"), plus parts that fit petrol, hybrid or electric vehicles alike.

1. Snapshot

Figure	Value	What it means
Q1 FY27 revenue (Apr-Jun 2026, company reported)	Rs 1,021 cr	First time a single quarter crossed Rs 1,000 cr. Up 33% on a year ago, a much faster pace than its usual high-teens growth.
Q1 FY27 operating profit (EBITDA)	Rs 196 cr, margin 19.2%	Profit from operations before interest, tax and depreciation, up 48%. Margin up two points on last year, helped by richer mix and a weaker rupee.
Q1 FY27 net profit	Rs 87 cr (Rs 100 cr adjusted)	Up 39%. It would have been about Rs 100 cr without a one-off US court settlement of about Rs 17 cr.
FY26 full year (for context)	Sales Rs 3,498 cr · profit Rs 327 cr	Last year's base. Sales grew 16% and profit 51%.
Market value / P/E (Screener, Nov 2026)	Rs 26,974 cr · ~77x	Investors pay about 77 rupees for each rupee of yearly profit. That's very expensive and higher than the ~63-66x when we last looked, so the price already assumes a lot of growth.
Return on equity (Screener)	~10.6%	Modest, partly because of the large share sale in late 2024 that left cash on the books. Not yet at the company's 20% return goal.

2. Concall coverage

Quarter	Date	Transcript read?
Q2 FY22 → Q3 FY26 (19 calls)	Nov 2021 - Feb 2026	Carried forward from the Q4-2026 report
Q4 FY26 (prior boundary)	21 May 2026	Read in the Q4-2026 report
Q1 FY27	13 Aug 2026	**Newly deep-read in full ★**

Only the Q1 FY27 call was read in full this quarter. The four-and-a-half-year backstory comes from the prior report. Screener's download audit showed 21 of 21 calls present, none missing.

★ Latest concall highlights: Q1 FY27 (call held 13 Aug 2026)

- **Best quarter ever.** Revenue Rs 1,021 cr (+33%), with record sales in cars, trucks and scooters. EBITDA up 48% and margin at 19.2%. Even after a one-off US tariff-duty provision of about Rs 13 cr (which they still hope to recover), margin held up.
- **ADS more than tripled.** Aerospace, defence and semiconductor parts brought in Rs 145 cr in the quarter. All non-auto business together hit Rs 200 cr, about a fifth of sales, up 130%.
- **One big new order.** Right after the quarter, an existing semiconductor-equipment customer placed an order worth about Rs 1,250 cr over five years. That lifted the ADS order backlog from Rs 4,440 cr to about Rs 5,700 cr, all to be executed by FY31. Revenue from this order starts in calendar 2027 and peaks in 2029.
- **Guidance nudged up.** FY27 growth was "high-teens" at the start of the year. Now management says high-teens to 20% is a good possibility, with ADS growing 75-80%. On margin they're sticking to "inch towards 19%" and called Q1 a little elevated.
- **Tone: confident.** Strong demand for at least the next quarter and a half. The worry is supply chain stress and cost inflation (aluminium, consumables, northern labour costs), with pass-through to customers not yet agreed.

Business mix & capacity

Domestic vs exports: About 40% of Q1 revenue came from overseas, a higher share than usual (exports ran about a third through FY26). Plain read: the export business, hit by US tariffs last year, is clearly back.
Segment mix: Petrol-engine (ICE) auto parts Rs 628 cr (about 61%), tech-agnostic and EV parts Rs 132 cr (about 13%), non-auto Rs 200 cr (about 21%).
Capacity: No utilisation figure was given, but core auto plants were already full last quarter. New auto capacity (Pantnagar, Manesar, Bangalore Plant 2) and the ADS hangar, surface-treatment shop and defence plant come on stream from Q3 FY27, finishing within a year. Management's plan is ADS space able to support about Rs 3,500 cr of sales by FY31, against about Rs 600-650 cr today.

★ Since our last report

Builds on the Q4-2026 report (call of 21 May 2026). Prior verdicts: **Trigger YES**, **Consistency YES** (qualified).

Prior read	What we said then	What the new call shows	Movement
Trigger: ADS shift	Real and playing out, Rs 4,460 cr backlog, Rs 550-600 cr FY27 target	ADS sales more than tripled in Q1, backlog now ~Rs 5,700 cr after a big semiconductor order; 75-80% FY27 ADS growth reaffirmed	Improving
Consistency	Delivers on the big bet, trims near-term timing	FY27 guidance raised, not trimmed. ADS target held	Confirmed
Export recovery after tariffs	Only just turning	About 40% of revenue from overseas; PV, premium bikes and off-road exports all up; energy-segment deliveries to a North American customer start paying from Q3	Improving
xEV / EV parts	Stalled, new orders paused	Record sales in this bucket, +22%, led by electric two-wheelers	Improving
US plant	Deferred for three years	"Status quo" again. Customers are buying more from India instead, so the delay isn't costing orders	Slipping (but harmless)
Nichidai JV & new aerospace space	Just signed, nothing produced	JV part of Plant 2 expansion; hangar to be commissioned within a month or two; build-to-suit plant planned in about ten months	On-track
Cost inflation & tariffs	A cloud over FY27	Absorbed in Q1 thanks to mix and currency. A Rs 13 cr provision for last year's US duty and a Rs 17 cr legal settlement hit profit	On-track

Verdict change: both verdicts unchanged. The trigger got stronger. Management did what it said and lifted guidance instead of walking it down, which eases our main worry about their timing.

★ 3. Earning-trigger thesis

The driver is the same as last quarter, only louder. Sansera is moving from plain engine parts into aerospace, defence and semiconductor-equipment parts, which earn 25-30% margins against the high-teens it makes on auto. ADS is now a fifth of sales and growing three times over, the backlog keeps getting bigger, and the AI-chip boom keeps its semiconductor customers busy until about FY29-30 by management's account. On top of that, the old auto business itself grew over 20% this quarter, so the base isn't shrinking while the new engine scales.

Trigger	What management said	Evidence so far	Time horizon	Strength	Change since last report
ADS (aero, defence, semicon)	75-80% growth in FY27; ~Rs 5,700 cr backlog by FY31; capacity for ~Rs 3,500 cr	Q1 ADS Rs 145 cr, more than 3x; new ~Rs 1,250 cr order	Now to FY31	Strong: orders in hand, margins higher	↑ bigger backlog
Semiconductor equipment parts	Customer demand exceeds supply till FY29-30	Existing customer heading to ~$75m a year of business with Sansera	Revenue from CY27, peak CY29	Strong, but one big customer	↑
Auto ICE + export recovery	Mid-teens growth in non-ADS business; outsourcing of crankshafts by OEMs	ICE +21%, record PV/CV/scooters, exports ~40% of revenue	Ongoing	Moderate: cyclical	↑ exports back
Tech-agnostic / xEV	EV shift "ahead of plan"	Record Rs 132 cr, +22%	FY27 on	Moderate	↑ from weak
Defence & sheet metal	Dedicated plant, ~Rs 500 cr capacity in five years; chasing European orders	Facility being set up; no big order yet	FY28 on	Unproven	New

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
May 2025	ADS to roughly double to ~Rs 300 cr in FY26	Rs 315 cr delivered	Delivered
May 2026	FY27 ADS Rs 550-600 cr; overall "high-teens" growth	Q1 ADS more than tripled, group +33%; guidance moved up to high-teens to 20%	On track
May 2026	New aerospace hangar ready by mid-2026	Built, being commissioned "in a month or two"; surface-treatment shop awaiting NADCAP approval	Partly (slight slip)
Feb/May 2026	Blisk (jet-engine part) order won	First samples due about a month after the call	Too early
2021 (IPO)	Non-auto + EV-agnostic to 40% of sales	About a third in Q1 FY27 and rising	Partly
2023 onward	US plant	Still on hold over tariffs	Deferred
Long term	"20-20-20": growth, margin, return on capital	Growth above 20% this quarter, margin 19-20%, returns still below 20%	On track

Narrative drift: none worth flagging. The story is the same one they've told since the IPO, and this quarter they had the rare experience of raising a number instead of trimming one. They did refuse to put a figure on margins above 19% and pushed back when analysts tried to stretch ADS to Rs 1,500 cr next year, which is a good sign. The open edges are the same as before: the US plant, and steel cost pass-through that hasn't been agreed yet.

5. Bottom line

Durable earning trigger? → YES

vs last quarter: unchanged

Nothing knocked it down and a lot went its way. The ADS business tripled in a quarter, a large fresh semiconductor order pushed the backlog to about Rs 5,700 cr, and auto exports came back. The catch is that semiconductor work leans on one big customer and the AI-chip cycle, and the auto half still rides the vehicle cycle.

Management consistent? → YES

vs last quarter: unchanged

What moved it toward a firmer yes: they met the ADS target last year and are tracking ahead of this year's, and guidance went up for once. It stays a qualified yes because the US plant is still parked and a couple of one-offs (old tariff duty, a US legal settlement) dented this quarter's profit.

Watch: the stock trades near 77 times earnings, so any slip in the ADS ramp would hurt. Capex is heavy and plants are full. Steel and labour cost pass-through still has to be won from customers.

Sources: 21 Sansera concall transcripts on Screener.in (Q1 FY27 call of 13 Aug 2026 read in full; earlier calls via the Q4-2026 report), Screener snapshot data. Q1 figures are company-reported consolidated numbers from the call. "cr" = crore. EBITDA = operating profit before interest, tax and depreciation. NADCAP = an aerospace quality approval. This is not investment advice. Do your own due diligence.
