Shivalik Bimetal Controls Ltd

Concall Tracker, Q1 2027 update | Ticker SBCL (BSE 513097) | Precision metal parts for circuit breakers, meters and EVs | Covers calls up to the Q1 FY27 webinar (7 Aug 2026)

1. Snapshot

What it does: Shivalik makes small but critical metal parts. Bimetal strips bend with heat and trip circuit breakers. Electrical contacts carry current inside switches and relays. Shunt resistors are precision strips that measure current in electricity meters, smart meters and EV battery systems. Its edge is electron-beam welding, joining two different metals so cleanly that current flows without disturbance, which it says no Indian rival does. It's now adding finished assemblies (busbars and cell-connecting systems for EV battery packs).

Figure	Value	Plain read
Market value	Rs 5,738 cr	Up from about Rs 4,257 cr at our last report.
Q1 FY27 revenue (consolidated)	Rs 182.2 cr	Sales in the quarter, up 33% on last year and 13% on the March quarter. About half the yearly jump came from higher silver prices passed through in contacts.
EBITDA (operating profit before interest, tax, depreciation)	Rs 43.2 cr	Up 35%. Margin around 24%, a touch better than FY26.
Net profit	Rs 33 cr	Up 45% on last year. Profit again grew faster than sales.
P/E	~59	You pay about 59 rupees per rupee of yearly profit (Screener, standalone). Pricier than the ~52 at our last report.
ROCE / ROE	25% / 20%	Healthy returns on the money in the business.

2. Concall coverage

Quarter	Call date	Transcript read?
Q4 FY23 → Q3 FY26 (12 calls)	May 2023 - Feb 2026	Carried forward from the Q4-2026 report
Q4 FY26 (prior report's boundary)	20 May 2026	Carried forward from the Q4-2026 report
Q1 FY27 (Apr-Jun 2026)	**7 Aug 2026**	**Newly deep-read in full ★**

Only the Q1 FY27 webinar was read in full this time. The three-year backstory comes from our Q4-2026 report.

2b. Latest concall highlights, Q1 FY27 (webinar 7 Aug 2026) ★

- **Strong start, partly from metal prices.** Revenue +33%, profit +45%. Shunts grew about 19%, bimetals about 7%. Management said roughly half the revenue growth came from silver costing about double last year's price, and that most of the shunt growth (about 70-75%) came from selling finished parts instead of raw strip.
- **First growth range in a while.** FY27 revenue growth of 20-30% if customer forecasts hold. It's a range, hedged as "early in the year".
- **Pune EV plant:** phase 1 got its consent to operate after the quarter. Full plant only running from October. Management now sees Rs 300-400 cr of revenue in about three years: 10-15% of that in year one, Rs 150-200 cr in year two. Production is for one big electric two-wheeler maker for now, with 2-3 more designs in the works.
- **The US is coming back.** Americas shunts +30%. The big US customer has given volume expectations for this year and is now buying higher-value parts. Its share of sales should stay under 20% (it was 35-40% at the peak).
- **Other news:** bimetal customers in India are calling for more volume for the first time in 4-5 quarters. Two new product ideas are in talks (a specialty electronics material and auto fuses), possibly through a partner or small acquisition. The CFO has left.

2c. Business mix & capacity

Product mix: standalone about 45% bimetal / 55% shunts expected this year; contacts subsidiary 30-35% of group revenue; new assemblies maybe 15-16% in year one. About 45-50% of total revenue goes into switchgear.
Domestic vs export: not given as a clean split. India grew in both businesses, Europe grew strongly, the Americas recovered and Asia was weak.
Capacity: shunt welding capacity at about 65-70% use, with more addable within 2-3 months. Pune adds assembly capacity for about Rs 20-25 cr because the expensive welding kit already sits in its existing plant.

2d. Since our last report ★

Builds on the Q4-2026 report (boundary call 20 May 2026). Prior verdicts: **Trigger YES**, **Consistency MAYBE**.

Prior read	What we said then	What the new call shows	Movement
Earning trigger	Value-chain shift lifting profit on flat volume	Profit +45%; strip sales down to a third as parts take over	Confirmed
Consistency	Story steady, growth driver swapped yearly	US recovery finally showing; but Pune targets reshaped and two more new ideas floated	Unchanged
Pune plant	Rs 70-75 cr FY27 → Rs 250-300 cr FY29	Phase 1 approved; full plant from October; Rs 300-400 cr in 3 yrs, smaller year one	On-track (goalposts moved)
US / big customer recovery	"Coming" since FY23, not here	Americas shunts +30%; customer volume plan in hand	Improving
Core bimetal	Flat for two years	+7%; first volume uptick in 4-5 quarters	Improving
Smart meters	Revenue to double again in FY27	Called a consistent growth area; no number given	On-track

Verdict change: both unchanged. The trigger is clearly working, but part of this quarter's jump is silver prices. The consistency read stays where it was: an old promise (US recovery) is finally coming good, but new growth ideas keep being added before the current ones are proven.

3. Earning trigger thesis ★

Shivalik is moving from selling metal strip to selling finished parts and now whole assemblies. Each step earns more per kilo, so profit grows faster than sales. Demand comes from smart meters, EV battery systems and switchgear, and the welding skill keeps rivals out. This quarter the pieces lined up: finished parts replaced strip, the US customer came back, and Indian bimetal demand picked up. The Pune assembly plant is the next leg, but it's only starting.

Trigger	What management said	Evidence so far	Horizon	Strength	Change since last report
Strip → parts → assemblies	Parts are sticky; most margin gain is sustainable	Strip down to a third; ~70-75% of shunt growth from value-add	Now-3 yrs	Strong	↑ clearer split given
Pune busbar / cell-connecting plant	Rs 300-400 cr in ~3 yrs on Rs 20-25 cr capex	Phase 1 approved; one customer; full plant from Oct	FY27-FY29	Moderate	unchanged (target reshaped)
US customer recovery	Back to old levels at higher value	Americas shunts +30%	1-2 yrs	Moderate	↑ first real sign
Smart meters and EV shunts	Fast development, local relays	Called out as growth areas	Now-2 yrs	Moderate-Strong	unchanged
Core bimetal (switchgear)	Customers now raising volumes	+7% in Q1	FY27-FY28	Weak-Moderate	↑ first uptick

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
FY23-FY24 (carried forward)	~25% growth; smart meters by FY26; Metalor JV	Growth single-digit; smart meters later; JV dropped	Missed / Dropped
FY25 (carried forward)	Forward integration lifts margins	Margin and profit up in FY26 and again in Q1	Delivered
FY23 → FY27	US / big customer recovery	Americas shunts +30% in Q1	Partly (finally starting)
May 2026	Pune: Rs 70-75 cr in FY27, Rs 250-300 cr by FY29	Now a smaller year one and a bigger end goal; full plant from Oct	Too early (reshaped)
May 2026	Manage for profit quality, not top line	Profit +45% vs sales +33%	Delivered
Aug 2026	FY27 growth 20-30%	Q1 +33%, but helped by silver	On track

Narrative drift: the core story ("move up the value chain with our welding skill") hasn't changed. Two habits from last time showed up again. Pune targets were redrawn within one quarter, with a lower near-term number and a bigger long-term one. And two fresh ideas (a specialty electronics material and auto fuses) were floated while Pune is barely running. In fairness, management said openly that the current business has limited room to scale on its own, and it was upfront that silver prices drove part of the growth.

5. Bottom line

Durable earning trigger? → YES

vs last quarter: unchanged

The value-chain move keeps showing up in profit, and this quarter added a US comeback and the first bimetal volume uptick in over a year. Strip sales shrinking to a third while profit jumps is the cleanest proof yet. Two cautions: about half the revenue growth was silver, which can reverse, and the stock now prices in a lot.

Management consistent? → MAYBE

vs last quarter: unchanged

One long-standing promise (the US recovery) is finally turning up, which helps. But the Pune targets were reshaped within a quarter, new product ideas keep arriving before current ones prove out, and the CFO has left. If Pune hits its first-year number after October and the 20-30% growth range holds without help from silver, this moves toward a YES.
