Chemplast Sanmar Ltd

Chennai chemical maker: India's largest paste PVC producer, a big suspension PVC maker (through Chemplast Cuddalore Vinyls), caustic soda and chloromethanes, plus a growing custom-manufacturing unit making agrochemical and pharma intermediates for global innovators, and new R32 refrigerant gas.

Concall-tracker report, filed under Q2-2027. Prepared 11 Nov 2026.

1. Snapshot

Number	Value	Plain read
Market cap	Rs 3,707 cr	What the market values the company at, below its book value
Q2 FY27 revenue	Rs 1,323 cr (consolidated)	Up about 28% on a year ago
Q2 FY27 EBITDA	Rs 111 cr, about 8% margin	Up from about 4% a year ago and a loss in Q1 FY27
Q2 FY27 net result	Loss of about Rs 5 cr	Much smaller than the Rs 51 cr loss a year ago and Rs 176 cr in Q1
Interest cost	About Rs 235 cr a year	Heavy debt load weighs on profit
Book value	Rs 198 a share	Shares trade below book

2. Concall coverage

Eleven calls read from Feb 2024 to Aug 2026. PENDING transcript: the Q2 FY27 call was held on 5 Nov 2026 but its transcript was not yet on Screener, the exchanges or the company site as of 11 Nov. The latest quarter here comes from results coverage (Multibagg, Sahi, Univest, 4-5 Nov 2026).

Quarter	Date	Transcript read?
Q3 FY24	Feb 2024	Yes
Q4 FY24	May 2024	Yes
Q1 FY25	Aug 2024	Yes
Q2 FY25	Nov 2024	Yes
Q3 FY25	Feb 2025	Yes
Q4 FY25	May 2025	Yes
Q1 FY26	Jul 2025	Yes
Q2 FY26	Nov 2025	Yes
Q3 FY26	Feb 2026	Yes
Q4 FY26	May 2026	Yes
Q1 FY27	7 Aug 2026	Yes, read in full
Q2 FY27	5 Nov 2026	Not yet published

Latest concall highlights: Q1 FY27 call (7 Aug 2026) and Q2 FY27 results (4 Nov 2026)

- Q2 FY27: revenue up 28% to Rs 1,323 cr, EBITDA Rs 111 cr (about 8% margin), net loss narrowed to about Rs 5 cr.
- Q1 FY27 had an EBITDA loss of Rs 115 cr from costly VCM (PVC raw material) bought during the Middle East disruption; management said that stock would be used up by August.
- Custom manufacturing: volumes up 21%, 14 molecules commercial, about 50 in the pipeline; Rs 1,000 cr revenue target said to be on track. MPB-3 Phase 3 commissioned.

- R32 refrigerant: swing plant producing since May 2026; full 14,000-tonne capacity by end FY27. Paste PVC 7,000-tonne debottleneck due Oct 2026.
- A board committee of three independent directors is reviewing strategic options with advisers. Karaikal PVC plant shut after a fire on 17 Jul 2026.

Business mix and capacity

- Mostly domestic for PVC and caustic; custom manufacturing is export-led (Europe, Japan innovators). Q1 FY27 mix: specialty 38%, value-added chemicals 11%, suspension PVC 51% of revenue.
- Custom manufacturing blocks at 60-70% utilisation before the new Phase 3; Paste PVC Cuddalore debottlenecking under way.

3. Earning trigger thesis

The hoped-for driver is the custom-manufacturing unit (agrochemical intermediates for global innovators) ramping to Rs 1,000 cr, plus new R32 refrigerant capacity. But the bulk of revenue is PVC, where profit swings with import prices and anti-dumping decisions the company doesn't control, and several of those decisions have gone against it.

Trigger	What management said	Evidence so far	Time horizon	Strength
Custom manufacturing ramp	Rs 1,000 cr target; more molecules commercial	Volumes up 21%; Phase 3 on stream	FY27-FY29	Moderate
R32 refrigerant gas	14,000 tonnes by end FY27	Swing plant selling since May 2026	FY27-FY28	Moderate
PVC spreads and import duties	Anti-dumping duty would help	Duties rejected or lapsed twice	Unclear	Weak

3b. Trigger check

Trigger type	Yes/ No	What was said (date)
Debt cut	No	Cash and accruals to service debt; no cut planned (Aug 2026)
New business	Yes	R32 refrigerant gas production started May 2026 (Jun and Aug 2026)
Margin up	No	Q1 FY27 EBITDA loss on costly VCM; recovery only expected (Aug 2026)
New management	No	-
New capacity	Yes	MPB-3 Phase 3 commissioned; R32 14,000 tonnes by end FY27; Paste PVC debottleneck Oct 2026 (Aug 2026)
Big orders	Yes	Healthy order book in custom manufacturing (Aug 2026)
Turnaround	Yes	Expected recovery as costly VCM stock runs out (Aug 2026)
Promoter buying	No	-

Single concrete driver: The custom-manufacturing unit is ramping new agrochemical molecules toward a Rs 1,000 cr target, with R32 refrigerant capacity coming on top.

3c. Margin bridge

EBITDA margin went from about 4% a year ago (and a loss in Q1 FY27) to about 8%. Expensive VCM bought during the Middle East disruption was used up and PVC spreads recovered as customs duty came back. This follows feedstock and import prices. (one-off)

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
2024-2025	Anti-dumping duties to lift PVC	Suspension PVC duty not accepted; paste duty lapsed	Missed
Feb 2026	MPB-3 Phase 3 in Q4 FY26	Commissioned in Q1 FY27	Partly
Feb 2026	R32 sales after swing plant by Q4 FY26	Started May 2026	Partly
Aug 2026	High-cost VCM gone by August; margins recover	Q2 EBITDA margin about 8%	Delivered
Aug 2026	Custom manufacturing Rs 1,000 cr target	Said on track	Too-early

The specialty story has stayed the same and is slowly happening, a quarter late each time. The PVC story has kept leaning on government duties that haven't come. The new strategic review is a change of tone that could mean a sale or restructuring.

5. Bottom line

Durable earning trigger? MAYBE

Custom manufacturing and R32 are real and adding capacity, but PVC still dominates the numbers and the company is barely breaking even.

Management consistent? MAYBE

Projects land roughly on time, a quarter late here and there; the PVC duty hopes kept failing, though that's partly outside its control.

> **6. Checkpoints for next quarter**
>
> - EBITDA margin holds near Q2 FY27 level
> - R32 new plants commissioned by March 2027
> - Strategic review committee announces an outcome
