

Premier Polyfilm Ltd

Concall Tracker · Q1 2027 (quarter ended June 2026) · Global web deep-dive (no concall transcripts) · Prepared 25 Jul 2026

1. Snapshot

What the business does: Premier Polyfilm (incorporated 1992) is an Indian maker of PVC (polyvinyl chloride, a common plastic) products made by calendering — rolling molten PVC into sheets. Its range: **artificial leather cloth** (used for car, bus and rail seating and interiors), **vinyl / PVC flooring, PVC films and sheeting, PVC geomembranes** (large waterproof liners for ponds, canals and landfills), plus pool liners, self-adhesive wallpaper and electrical insulating mats. It sells mostly in India and also exports. Two plants, both in Uttar Pradesh (Sahibabad, Ghaziabad; and Sikandrabad, Bulandshahar). In plain terms: it converts PVC resin into finished sheet-and-roll products and earns a margin on that conversion.

Market cap	~₹831 cr — the stock market's price tag for the whole company (a small-cap).
Share price / P/E	₹79.3, trading at ~23.8x earnings — buyers pay ~₹24 for every ₹1 of yearly profit; a moderate rating for a steady small-cap.
Revenue (FY26)	~₹299 cr, and ~₹322 cr over the trailing twelve months — total yearly sales; up from ~₹259 cr in FY24, so growth has picked up. (Some data providers show a slightly higher gross figure of ~₹300–341 cr depending on how excise/GST is treated.)
Net profit (FY26)	~₹32 cr, ~₹35 cr on a trailing-twelve-month basis — what's left for shareholders after all costs and tax; up from ~₹21 cr in FY24, i.e. profit grew faster than sales.
Operating margin	16% in FY26, up from 9% in FY22 — for every ₹100 of sales, ~₹16 is operating profit; margins have roughly doubled in four years.
Balance sheet	Borrowings ~₹0 as of Mar 2026 (debt-free), reserves ~₹137 cr — the company owes essentially nothing and funds itself from its own profits.
Returns	ROCE 30.8%, ROE 24% — it earns ~31 paise of operating profit per rupee of capital employed and ~24 paise of net profit per rupee of shareholder money; both are high, a sign of an efficient business.

2. Coverage

No concall transcripts available — global web deep-dive

No earnings-call (concall) transcripts were available on Screener for Premier Polyfilm. The company is a small-cap that does not host regular investor concalls, so this report answers the two questions from a global web deep-dive: the company website, published quarterly/annual results, credible financial news, and an ICRA credit-rating record. Because there is no management call to read, the *consistency* read leans on the numbers and the public record rather than on promised-vs-delivered call commentary — a genuine limitation, flagged below.

Sources used: premierpoly.com (company site); Screener.in financial snapshot; MarketsMojo Q4 FY26 & Q1 FY27 result analyses; ScanX / Sahi / Whalesbook results coverage; Business Standard (Oct 2024 expansion note); ICRA rating record (Jan 2025).

Period	Source read	Note
FY24 → FY26 (annual)	Screener financials + results coverage	Three years of published numbers used for the trend read.
Q4 FY26 (Mar 2026)	MarketsMojo / Sahi result analysis	Full-year FY26 close; board approved results 9 May 2026.
Q1 FY27 (Jun 2026) ★	MarketsMojo / ScanX result analysis	Freshest quarter — deep-read for latest signal (see box below).

No concall history exists to span; the read covers roughly the last 3 fiscal years of published results plus the latest quarter.

★ Latest update highlights — Q1 FY27 (June 2026)

- **Record quarter.** Revenue ~₹88 cr (Screener net sales; ~₹100 cr on the reported "revenue from operations" basis) — up ~34–35% year-on-year and the highest quarterly sales in the company's history. Plain read: sales jumped by about a third versus the same quarter last year.
- **Profit up 51%.** Net profit ~₹9.08 cr vs ~₹6.0 cr a year earlier — a record quarterly profit; the bottom line grew even faster than sales.
- **Margins healthy but not expanding.** Operating margin ~15.4% — up slightly year-on-year but down a touch from the prior quarter (~16.2%); raw-material (PVC resin) price swings and a small rise in staff cost kept a lid on further margin gains.
- **Demand driver.** Growth attributed to market-share gains in vinyl flooring and leather cloth, riding India's construction, automotive and furniture demand.
- **Balance-sheet signal.** Debt-free, and **promoters raised their stake to ~71.1%** (from ~67.4% a year ago) — insiders buying more of their own company, generally a confidence signal.

2c. Business mix & capacity

Domestic vs export split: *not broken out by the company in recent disclosures.* Premier Polyfilm is a domestic-led manufacturer that also exports PVC geomembrane and calendered products, but no current India-vs-overseas revenue percentage is publicly stated — so we do not guess one. **Capacity utilization:** *current level not disclosed* in recent public information (an old FY11 annual report cited ~66%); management does not publish a running utilization figure. **Expansion:** the board approved buying industrial land in **Tamil Nadu** (announced Oct 2024) for a greenfield plant to diversify beyond its Uttar Pradesh base and serve South India — specific capex amount and timeline are **not yet finalized**.

3. Earning-trigger thesis

The main thing that can grow earnings is **volume-led growth from capacity expansion plus a steady margin step-up**. Demand for PVC flooring, leather cloth and geomembranes is rising with India's construction, automotive and furniture cycles, and Premier says it is gaining share. It has run its existing plants harder and lifted operating margin from ~9% (FY22) to ~16% (FY26). The next leg depends on **adding capacity — chiefly the planned Tamil Nadu greenfield plant — funded comfortably from a debt-free, high-return (ROCE ~31%) balance sheet**. The risk: that new plant's cost and timing are still undefined, and a greenfield build in a new region carries execution risk.

Trigger	What the record says	Evidence so far	Horizon	Strength
Demand-led volume growth (flooring, leather cloth, geomembrane)	Share gains on construction / auto / furniture demand	Q1 FY27 sales +~34% YoY, record quarter; TTM revenue ~₹322 cr vs ~₹259 cr in FY24	Now / ongoing	Strong — visible in the numbers now
Margin step-up	Operating efficiency, better mix	OPM ~9%→16% over FY22–FY26; but flat-to-softer QoQ lately on resin-price swings	Ongoing	Moderate — achieved, but limited room / commodity-linked
Tamil Nadu greenfield capacity	Land approved Oct 2024 to diversify base & add capacity	Only land stage; capex size & timeline not finalized	Medium term (multi-year)	Unproven — not yet started; execution risk

4. Management consistency scorecard

No concalls means no promised-vs-delivered call statements to check; this scorecard reads consistency from the published financial record and disclosed actions over the last ~3 years.

Period	Implied intent / public statement	What actually happened	Verdict
FY22→FY26	Grow revenue and improve profitability	Sales ~₹212 cr → ~₹299 cr; net profit ~₹10 cr → ~₹32 cr; OPM ~9% → ~16%	Delivered
FY24→FY26	Strengthen the balance sheet	Borrowings cut to ~₹0 (debt-free by Mar 2026); reserves built to ~₹137 cr	Delivered
Oct 2024 onward	Expand capacity via Tamil Nadu greenfield plant	Land approved; capex/timeline still not finalized nearly two years on	Too-early
Recent quarters	Keep growing profitably	Q4 FY26 profit +53% YoY; Q1 FY27 record sales +34% YoY, profit +51%	Delivered
Ongoing	Return cash to shareholders	Dividend paid but payout low (~5–6% of profit) — company retains most earnings for growth	Partly

Narrative drift: With no concalls, there is no spoken story to drift — but the *track record* has been steady and improving: consistent revenue growth, doubling of margins, debt eliminated, and promoters raising their stake (67% → 71%). The one open item is the Tamil Nadu expansion, announced in Oct 2024 but still at the land stage with no firm capex or timeline — worth watching that it converts from intent to a running plant. Overall tone (as read from actions and results) is disciplined and growth-focused.

5. Bottom line — two verdicts

Durable earning trigger? → MAYBE (leaning positive)

There is a real, visible driver *today* — demand-led volume growth and a margin step-up that the numbers confirm (record Q1 FY27, TTM revenue up ~25% over FY24, margins near their best ever). That part is strong. It reads MAYBE rather than a clean YES because the **next leg of growth hinges on the Tamil Nadu greenfield plant, which is still only at the land stage** with no finalized capex or timeline, and current-plant margins have limited headroom left. If that expansion firms up and delivers, this upgrades to YES.

Management consistent? → YES (with a caveat)

On the evidence available, management has consistently delivered: multi-year revenue growth, operating margins roughly doubled, debt fully paid off, and rising promoter ownership — a coherent, disciplined record with no story reversals. The caveat is twofold: (1) there are **no concalls**, so we cannot test spoken promises against delivery the way we would for a company that holds calls; and (2) the Tamil Nadu expansion has been slow

to move from announcement to action. Both temper confidence slightly but do not change the underlying picture of a management that does what its numbers imply.

Not investment advice. Do your own due diligence. — Prepared from public sources; no concall transcripts were available for Premier Polyfilm, so this is a global web deep-dive. Figures are approximate and drawn from Screener.in and published results coverage; different data providers report slightly different revenue on gross-vs-net bases.
