1. Snapshot

What it does: MTAR is a Hyderabad precision-engineering shop for metal parts very few firms can make. Its biggest line is the "hot box" that sits inside Bloom Energy's fuel-cell power units in the US, which are now selling into AI data centres. It also makes nuclear-reactor parts, ISRO rocket-engine parts, aerospace and defence assemblies, and a growing set of products like ball screws. Customers stick with it because qualifying a new supplier takes years.

Measure	Value	What it means
Market cap	₹16,755 cr	What the whole company is worth on the market.
Share price (52-week range)	₹5,448 (₹2,217-8,715)	A very wide swing. The market keeps changing its mind on how fast this plays out.
P/E	87×	₹87 paid for every ₹1 of last year's profit. Expensive, though falling fast as profit catches up.
Q2 FY27 revenue	₹407 cr	Sales for Jul-Sep 2026: a record, three times the ₹136 cr of a year ago and 13% above the June quarter.
Q2 FY27 EBITDA margin	24.4%	Operating profit before interest, tax and depreciation: ₹24 kept per ₹100 of sales. Just above the 24% guide.
Q2 FY27 net profit	₹60 cr	Profit after all costs and tax, up from ₹4 cr a year ago. H1 profit is ₹110 cr.
Debt vs investments	₹465 cr vs ₹358 cr	Net debt about ₹107 cr. Small today, but the ₹500 cr capex plan is about three-quarters debt-funded.

2. Concall coverage (split view)

Quarter	Call date	Read for this report?
Q1 FY24 → Q4 FY26 (12 calls)	Aug 2023 to May 2026	Carried forward from the Q4-2026 and Q1-2027 reports
Q1 FY27 (prior boundary)	30 Jul 2026	Read in the Q1-2027 report
Q2 FY27	30 Oct 2026	Newly deep-read in full ★

Only the Q2 FY27 call was read in full this time. The backstory comes from the earlier reports, so the full record now spans 14 quarterly calls from Aug 2023 to Oct 2026. (Screener is missing one old Aug 2021 transcript, outside the window.)

★ Latest concall highlights: Q2 FY27 (call held 30 Oct 2026)

- **Another record quarter.** Revenue ₹407 cr (up 200%), EBITDA ₹99 cr at 24.4%, profit ₹60 cr. Plain read: two quarters in, H1 has grown roughly 160%, well ahead of the 80% full-year plan.
- **Guidance held again, with the same wink.** The 80% growth / 24% margin guide stays, and the MD repeated they'll "definitely do better" on both. They won't formally raise mid-year. H2 is expected to beat H1.
- **Orders keep pouring in.** ₹4,102 cr of new orders in H1. The nuclear book is ₹820 cr after refurbishment wins, and Mahi Banswara (four reactors) could be worth ₹700-1,000 cr if it lands.
- **But the capacity dates moved.** Fuel-cell Phase 2 (about 30% more capacity) is now "end of November", not Sep-Oct. The "multifold" Phase 3, promised by March 2027, is now June 2027 in the Q&A, and the opening remarks say the overall expansion completes by June 2028.
- **A disclosure slip.** About ₹60 cr of product-division revenue was booked under clean energy in the investor deck. The company said it will correct and re-upload. Products should be close to ₹500 cr this year.

Business mix & capacity (Q2 FY27). Exports were more than 70% of FY26 revenue, mostly to Bloom in the US. No new split was given on this call, but the fuel-cell, data-centre and aerospace growth is all export. Plain read: a dollar earner, still heavily tied to one US customer. No utilisation figure given. Management says demand is "a lot more" than it can build, so growth depends on Phase 2 (end Nov 2026) and Phase 3 (mid-2027) landing. Working capital is down to 50 days, targeted at about 100 by March 2027 and 150 long-term as growth needs stock.

★ Since our last report

Builds on the Q1-2027 report (boundary call 30 Jul 2026). Prior verdicts: trigger YES, consistency MAYBE (improving).

Prior read	What we said then	What the new call shows	Movement
Trigger: YES	Bloom boom plus nuclear and aerospace, already in the numbers.	Another record quarter, margins up, orders still flowing.	Confirmed
Consistency: MAYBE	Delivery on track; two bad years still on the record.	Numbers beat again, but capacity and nuclear dates slipped.	Unchanged
FY27 guide (80% / 24%)	On track after Q1.	H1 well ahead; guide kept, "will do better".	On-track
Fuel-cell Phase 2 / Phase 3	Phase 2 Sep-Oct 2026; Phase 3 by Mar 2027.	Phase 2 end Nov 2026; Phase 3 June 2027 (June 2028 for the whole build in the opening remarks).	Slipping
Nuclear billing (Kaiga 5 & 6)	Starts in H2 FY27.	"Certain revenues" this year; majority from FY28.	Slipping again
Working capital	59 days; target ~100 for the year.	50 days; target unchanged.	Confirmed
Data-centre customer	First-article stage; ₹45 cr order by Feb-Mar 2027.	Executing the ₹45 cr first articles; plant ready Dec 2026 / June 2027; sized at ₹350-450 cr over two years.	On-track

Verdict change this quarter: both unchanged. The numbers keep beating, which keeps the trigger a clear YES. Consistency doesn't get the upgrade we hinted at last time, because the dates that matter for next year (Phase 3, nuclear billing) both moved out, and the investor deck had to be corrected.

★ 3. Earning-trigger thesis

The engine is still Bloom Energy's fuel-cell demand, driven by the US rush to power AI data centres. MTAR is the majority hot-box supplier, and the MD says only one other supplier exists. Around it sit newer legs that are starting to count: a products division heading to about ₹500 cr this year, MNC aerospace aiming for ₹150 cr

plus, a nuclear book of ₹820 cr, and new data-centre and oil-and-gas lines from FY28. The trigger is live and visible in two straight record quarters. The risk is plain: most of it still rides on one US customer, and the next leg of growth needs Phase 3, whose date just moved.

Trigger	What management said	Evidence so far	Horizon	Strength	Change since last report
Bloom fuel-cell hot boxes	Demand ahead of capacity; Phase 2 Nov, Phase 3 mid-2027.	Record quarter; H1 inflow ₹4,102 cr.	Now to FY29	Strong. Demand real, capacity the limit.	Unchanged (dates slipped)
Products division	Close to ₹500 cr this year; ₹1,000 cr+ by FY30.	About ₹125 cr in Q2 once corrected; ball-screw exports started.	FY27-FY30	Moderate to strong.	↑ Improving
Civil nuclear	Majority of revenue from FY28.	₹820 cr book; refurbishment wins this quarter.	FY28-FY30	Strong on orders, slow on billing.	↓ Billing pushed out
Aerospace & defence	MNC aerospace ₹150 cr+ in FY27; Tejas actuators "at the earliest".	First articles finishing this year; four MNC customers.	FY27-FY30	Moderate.	Unchanged
Data-centre infrastructure	₹350-450 cr over two years after first articles.	₹45 cr first articles in execution; plant being built.	FY28+	Unproven.	↑ Sized for the first time

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
FY24 (Aug 2023)	₹830-860 cr revenue, ~28% margin.	₹581 cr, ~18% margin.	Missed
FY25 (May 2024)	₹900 cr, later cut to ₹725-750 cr.	₹676 cr.	Missed
FY26 (May 2025)	25% growth, later 30-35%.	₹876 cr, about 30%.	Delivered
Working capital	Bring it down from ~200 days.	172 (Mar 2026) → 59 (Jun) → 50 (Sep).	Delivered
Order book (May 2026)	₹5,000 cr by Mar 2027.	₹5,143 cr by June 2026.	Delivered early
FY27 (May 2026)	About 80% growth, 24% margin.	H1 roughly 160% growth at about 24%.	On track, ahead
Fuel-cell capacity (May-Jul 2026)	Phase 2 Sep-Oct 2026; Phase 3 by Mar 2027.	Phase 2 end Nov; Phase 3 June 2027 or later.	Partly / slipping
Nuclear revenue	Ramp "in H2" since the FY24 calls.	Majority now from FY28.	Slipping
Segment reporting (Q2 FY27)	Clean investor disclosures.	₹60 cr mis-booked between segments; deck to be re-uploaded.	Miss

Narrative drift. The story hasn't wandered in three years: Bloom, nuclear, aerospace, fix working capital. Delivery on revenue, margin and cash has been on time or early for five quarters now. What keeps slipping is the stuff with a calendar date on it. Nuclear billing has been "next half" for two years, and the Phase 3 build, which matters most for FY28, moved by at least a quarter in three months. The tone is very confident. The MD again called AI-capex worries "unwanted speculation" and won't share capacity numbers because of a customer confidentiality deal. That's backed by orders today. But it's the same one-customer exposure that undid FY24-FY25.

5. Bottom line: two verdicts

Durable earning trigger? → YES · vs last quarter: unchanged

Nothing moved this down. Revenue tripled, margins edged up, cash flow was strong, and orders keep coming from more than one segment. Products and aerospace are turning into real revenue, so it's slowly becoming less of a one-customer story. The catches: Bloom still drives most of it, and the next leg needs Phase 3 built on its new, later date. A clear Yes.

Management consistent? → MAYBE · vs last quarter: unchanged

Last time we said a couple more quarters like Q1 would make this a Yes. Q2 delivered on the numbers, but it also moved the Phase 2 and Phase 3 dates, pushed nuclear billing to FY28 again, and needed a correction to its own segment figures. The financial promises are being kept. The project timelines aren't yet. Still a MAYBE, leaning better.
