Marine Electricals (India) Ltd

Concall tracker, Q2 2027 (quarter to Sep 2026) · NSE: MARINE · first report on this company

1. Snapshot

A Mumbai and Goa company, started in 1978, that designs and builds the electrical systems inside ships and big buildings: switchboards, power distribution, ship-bridge navigation and control systems. Customers are Indian Navy and Coast Guard shipyards, and more and more, data-centre builders. It earns by winning fixed-price contracts and delivering the equipment over 8 to 24 months.

Number	Value	Plain read
Market cap	₹5,783 cr	A mid-sized small-cap; the stock has nearly tripled from its 52-week low.
FY26 revenue / profit	₹747 cr / ₹53 cr	Last year was slow: sales up only 7%, though profit grew faster.
Q2 FY27 revenue (consolidated)	₹405 cr	Up 82% on a year ago. A step change: a single quarter now earns more than half of last year's sales.
Q2 FY27 net profit	₹32 cr	Up 93%; profit grew a bit faster than sales.
Operating margin	about 12%	Twelve paise of operating profit per rupee of sales. Thin but typical for contract engineering; it has crept up from 8-9% two years ago.
P/E / ROE	78x · 11.7%	Very expensive on past profit; return on shareholders' money is only middling, so the price assumes the new orders turn into much higher earnings.

2. Coverage

No concall transcripts were available on Screener, NSE/BSE or the company site. This report is based on a global web deep-dive. Marine Electricals doesn't hold earnings calls; its public voice is results filings, order-win announcements and an investor deck.

Sources used: Q2 FY27 results filing (board meeting 4 Nov 2026) and its summaries on Multibagg and Arthneeti; Arthneeti summaries of the Q1 FY27 and Q2 FY26 investor decks; FY2025-26 annual report (NSE archive); order-win news (Sahi, Business Standard, Angel One, Arihant); Goa plant opening news (Sahi, Sep 2026); MEL Shipyard stake sale news (ScanX, Jun 2026); the ValuePickr forum thread; Screener financials. Where secondary sources disagree, the report says so.

Latest update highlights, Q2 FY27 results (4 Nov 2026)

- Revenue ₹405 cr, up 82%; net profit ₹32 cr, up 93%. Best quarter by far.
- New orders of about ₹2,059 cr in the quarter; open order book reported at ₹3,514 cr at 30 Sep 2026, against ₹1,254 cr in March 2026. That's more than three years of last year's sales. (Order-book figure from a results summary; not checked against the company deck.)
- Further orders after quarter-end: about ₹394 cr (5 Oct) and ₹362 cr of power systems (27 Oct).
- New Goa plant for data-centre power train units began operating 14 Sep 2026, aimed at about 800 units a year at full output by March 2027.
- Board approved turning up to ₹17 cr of loans to subsidiary MEL Heavy Industries into equity.

Business mix & capacity

Segment: about 65% of the June 2026 order book was "Industry" (data centres and industrial infrastructure), the rest marine and defence. A year earlier it was 59% marine, so the mix has flipped toward data centres.

Domestic vs export: not broken out by the company. It has small units in the UAE and Italy, but India is the bulk.
Capacity: six plants in Goa plus one in Vadodara; utilisation not disclosed. The new Goa plant is the expansion.

3. Earning trigger thesis

The driver is data centres. Large operators building in India (Princeton Digital, STT Global, Equinix, CtrlS, Digital Edge) are handing Marine Electricals big power-distribution orders, and the order book has roughly tripled in six months. A dedicated Goa plant for data-centre power units started in September. The navy shipbuilding business is the steady base underneath. The numbers have started to show it: September-quarter sales nearly doubled.

Trigger	What the company said	Evidence so far	Time horizon	Strength
Data-centre power systems	Focus on data centres and industrial infrastructure (Q1 FY27 deck)	Order book from ₹1,254 cr (Mar 26) to ₹2,073 cr (Jun 26) to ₹3,514 cr (Sep 26)	FY27-FY29	Strong: orders are signed and sales jumped
Goa data-centre plant	About 800 power train units a year by March 2027	Started 14 Sep 2026	By Mar 2027	Moderate: just started, ramp unproven
Navy and shipyard work	Bridge and power systems for GRSE, Cochin, Goa Shipyard	Steady stream of shipyard orders	Ongoing	Moderate: steady, not the growth engine

3b. Trigger check

Trigger type	Yes/ No	What was said (date)
Debt cut	No	Not stated; borrowings about ₹84 cr at Mar 2026
New business	Yes	"Sharpening focus on Data Centres and Industrial Infrastructure" (Q1 FY27 deck, Aug 2026)
Margin up	No	No margin statement from the company
New management	No	Uchil family still runs it
New capacity	Yes	New Goa plant for data-centre power train units began 14 Sep 2026, full capacity targeted March 2027
Big orders	Yes	₹2,059 cr of new orders in Q2 FY27; order book ₹3,514 cr at 30 Sep 2026 (results, Nov 2026)
Turnaround	No	Not applicable
Promoter buying	No	Warrants were issued at ₹205 in Feb 2026, but promoter holding fell to 65.2% in Sep 2026 from 68.2%

Single concrete driver: data-centre operators placing large power-distribution orders, which tripled the order book in six months and are now being built in a new Goa plant.

3c. Margin bridge

Operating margin is about 12% now against 9-10% two years ago. The company hasn't explained it; the likely reasons are bigger orders spreading fixed costs and more equipment-heavy data-centre work. Without management saying so, call it unexplained, and treat it as neither lasting nor one-off yet.

4. Management consistency scorecard

Period	What was promised / signalled	What actually happened	Verdict
FY25-FY26 decks	Grow data-centre and industrial share alongside marine	Industry share of order book went from about 41% to about 65%	Delivered
FY26 annual report (Sep 2026)	"Further strengthening of our order book during FY 2026-27"	Order book nearly tripled by September	Delivered
Sep 2026	Goa plant at full output by March 2027	Started on time; ramp to be seen	Too early
FY26	No guidance given	Sales grew only 7% that year, a flat patch that the company never explained	n/a

Narrative drift: the story has evolved sensibly, from a shipyard supplier to a data-centre power supplier, and the orders back it. The harder thing to judge is how management behaves, because it gives no guidance and takes no questions. Two things to watch: in June 2026 the company sold 70% of its MEL Shipyard subsidiary to the two promoters, Vinay and Venkatesh Uchil (a related-party deal), and the forum notes old receivables overdue beyond six months and a GE arbitration payable.

5. Bottom line

Durable earning trigger? → YES

A named, concrete driver with signed orders worth over three years of sales, a new plant built for it, and a September quarter where sales nearly doubled. The risk is execution on fixed-price contracts and a valuation that already prices in a lot.

Management consistent? → MAYBE

What it signalled, it delivered. But there are no calls and no targets to hold it to, and selling a subsidiary to the promoters while promoter holding slips is the kind of thing that needs explaining. Not a red flag yet, but it's not a clean record either.

6. Checkpoints for next quarter

- Quarterly sales stay well above last year as the order book is executed
- Operating margin holds at the new higher level
- Goa data-centre plant shows output ramping toward March 2027 target

No concall transcripts exist; sources as listed in Section 2. Order-book figures come from secondary results summaries. Not investment advice.
