

Haldyn Glass Ltd

Concall Tracker · Q1 FY2027 (quarter ended 30 June 2026) · NSE: HALDYINGL · Report prepared 21 Aug 2026

Not investment advice. Do your own due diligence. An AI-generated reading of the company's public financials, annual filings, credit-rating rationales and news record. This company holds no earnings calls — see Section 2.

1 Snapshot

Haldyn Glass makes **container glass** — bottles and jars, not window glass — from one plant at Gavasad near Vadodara, Gujarat, selling mainly to liquor companies and secondarily to food, beverage, pharmaceutical and cosmetics packers.

Item	Number	What it means in plain words
Market capitalisation	₹717 crore	Genuinely small. India's largest container-glass maker runs about ten times Haldyn's furnace capacity.
Price / 52-week range	₹133 · ₹70–139	Nearly doubled off its low and near the top of its range — the market has already noticed the recovery.
FY26 revenue	₹464 crore	Highest ever, up 55% in two years, because a rebuilt and enlarged furnace came on stream.
FY26 operating profit & margin	₹62 crore · 13%	EBITDA = earnings before interest, tax, depreciation and amortisation: operating cash profit before financing and accounting charges. 13% is normal-to-decent for commodity glass.
FY26 net profit standalone / consolidated	₹18 cr / ₹24.8 cr	The gap is a 50% share of a profitable joint venture, carried on one line rather than merged into sales. Know which figure you quote.
Melting capacity	~445–450 tonnes/day	Tonnes per day (TPD) = molten glass poured in 24 hours. Two furnaces, roughly 285 + 160 TPD, feeding ~1.5 million bottles a day.
Borrowings / net worth March 2026	₹116 cr / ₹226 cr	Debt is half of shareholders' money — borrowed but not stretched, and down from ₹128 crore a year earlier.
ROCE / ROE (FY26)	12% / 8.7%	ROCE = pre-tax profit per rupee of debt-plus-equity employed; ROE = post-tax return on shareholders' money alone. Both modest — a capital-heavy business that just swallowed a large investment.
Dividend	₹0.70/share, 21% payout	Unbroken for at least a decade. Small in yield (0.53%) but a real cash habit.

Five-year record (standalone, ₹ crore).

Year to March	FY22	FY23	FY24	FY25	FY26	Plain read
Revenue	213	320	299	382	464	Up 2.2x in four years with one dip — FY24 fell because a furnace was shut for rebuilding.
Operating profit	16	30	40	54	62	Rose every year, including the year revenue fell — the new furnace makes better-priced bottles.
Operating margin	8%	9%	13%	14%	13%	A permanent step up from single digits to low teens. The FY26 dip is gas costs, not a broken trend.
Net profit	11	20	19	13	18	The odd line: profit fell in FY25 despite record sales , eaten by interest and depreciation.
Interest	1	2	11	16	14	The whole cost of the expansion in one row — now falling, so the drag is unwinding.
Depreciation	7	8	19	30	30	Quadrupled and stays there: a permanent ~₹30 crore annual charge on the new assets.

Last seven quarters (standalone, ₹ crore).

Quarter	Dec 24	Mar 25	Jun 25	Sep 25	Dec 25	Mar 26	Jun 26
Revenue	105.3	83.6	115.0	115.7	124.7	108.2	138.7
Operating profit	12.1	13.5	16.6	13.1	16.2	15.8	21.7
Operating margin	11.5%	16.2%	14.4%	11.3%	13.0%	14.6%	15.7%
Interest	3.9	3.9	3.6	3.4	3.3	3.0	2.9
Net profit	3.3	3.2	4.0	4.4	4.6	5.3	9.2

Plain read. Q1 FY27 set records on every line: revenue ₹138.7 cr (+20.6% year on year, +28% on the March quarter) and margin 15.7%, the best of the seven. With interest falling at the same time, net profit more than doubled to ₹9.2 cr standalone (₹10.26 cr consolidated, +90%). The counterpoint: net profit sat in a ₹3–5 crore rut for five straight quarters while sales grew — June 2026 is the *first* quarter where operating gains reached the bottom line, and one quarter is one quarter. FY26 operating cash flow of ₹62 crore matched reported EBITDA rupee for rupee, so the profits are cash, not accounting.

2 Coverage — what this report is built on

No concall transcripts were available on Screener — this report is based on a global web deep-dive.

Haldyn Glass holds no earnings conference calls. Screener.in's HALDYNGL page lists annual reports and credit ratings but carries **no concall or investor-presentation entries at all**, and the local document folder for this company is empty. There is no transcript in which management states a target, and none in which an analyst can hold them to it. Everything below is reconstructed from written filings, one credit-rating agency's factory-level diligence, and the news record.

Sources actually used

- **Screener.in** — HALDYNGL page and financial tables (snapshot, P&L, quarters, balance sheet, ratios, cash flow, shareholding), drawn 20 Aug 2026 — the whole financial spine, plus confirmation that no concalls exist.
- **CARE Ratings press release, 10 January 2025** — by far the most useful document in the file: furnace count and tonnage, the ₹207 crore capex and its funding, the 90-day furnace shutdown, liquor at 70% of revenue, top-10 customers at 65%, fuel at ~25% of cost, pass-through "with a lag", the Heinz joint venture, working-capital limits ~90% drawn.
- **Directors' Report FY2025-26** (via India Infoline): total income ₹472.7 cr, PAT ₹18.32 cr, dividend ₹0.70, debt-equity 0.50x, "highest turnover and highest EBITDA in the history of the Company", start of coloured beer-bottle production, JV profit ₹10.25 cr.
- **Q1 FY27 results and board outcome, 3 Aug 2026** (Whalesbook, ScanX, Sahi, MarketsMojo, Multibagg) and **FY26 audited results, 21 May 2026** (Business Standard / Capital Market). Plus **exchange announcements** on the Jamnagar Renewables Two captive-solar stakes (Jun–Jul 2026) and **haldynglass.com** (450 TPD, two furnaces, 1.5 mn containers/day, 10+ IS machines).
- **Sector context:** CARE press release on AGI Greenpac (8 Apr 2026); the Supreme Court / INSCO resolution of Hindusthan National Glass; Mordor Intelligence India container-glass sizing; trade reporting on the March 2026 industrial gas shortage.

Not available: any transcript, any investor presentation, any sell-side research, and the January 2026 CARE action — Screener lists it but the document could not be retrieved, so all rating-agency operating detail below is from January 2025.

2b Latest update highlights

Latest update highlights — Q1 FY27 (quarter ended 30 June 2026)

- **Record quarter on every line:** revenue ₹138.69 cr (+20.6% YoY), operating profit ₹21.7 cr, margin 15.7%, standalone net profit ₹9.24 cr (+130%), consolidated ₹10.26 cr (+90%). *Results filing 3 Aug 2026; Screener.*
- **A fresh ₹150 crore capital plan approved the same day** — to "rebuild, modernise and expand" existing capacity, adding roughly **75 tonnes per day**, over 12 months from 3 Aug 2026, funded by internal cash plus new debt. *Board outcome 3 Aug 2026.*
- **Succession formalised:** founder N. D. Shetty moves from Executive Chairman to Founder Non-Executive Chairman after 15 Aug 2026; son Tarun Shetty reappointed Managing Director for three years from 16 Aug 2026. *Board outcome 3 Aug 2026.*
- **Dividend held at ₹0.70 per share** for FY26, record date 28 Aug 2026, for approval at the 35th AGM on 4 Sept 2026. *Board outcome; FY26 Directors' Report.*
- **FY26 called the best year in company history** on turnover and EBITDA, and the year coloured (amber) beer-bottle production began — a new product line, not just more of the same. *FY26 Directors' Report.*
- **Captive renewable power:** Haldyn took a stake in Jamnagar Renewables Two for ₹1.44 cr, the JV took 1.39% for ₹3.74 cr, both to draw solar under the captive route. Small sums, right direction for an energy-hungry business. *Exchange announcements.*

2c Business mix and capacity — and how this industry works

The economics, plainly. A glass furnace is a bath of molten glass held above 1,500°C. You cannot switch it off at night — letting the glass freeze destroys the lining — so it runs around the clock for years and the only way to make money is to keep it full: **utilisation is everything**. Every eight to twelve years the refractory lining wears out and the furnace must be drained and **rebuilt (relined)**: months of lost production plus a large cash bill, enough to wipe out most of a year's profit. The melting heat in India comes mostly from **natural gas**; fuel and power are about a quarter of total cost, with soda ash and silica sand the main raw materials. And a bottle is heavy and cheap, so freight eats the value fast — container glass is a **regional** business, and a Gujarat plant competes for western India and port-bound export demand, not all of India.

Furnace capacity. ~445–450 TPD across **two** furnaces, roughly **285 + 160 TPD**, feeding 10+ IS (individual-section) forming machines and ~1.5 million containers a day, from 10 ml to 2,500 ml, in flint (clear) and now amber (brown) glass. Capacity went 350→445 TPD when the larger furnace was rebuilt and enlarged, commissioned September 2023 with German supplier HORN Glass Industries.

Utilisation: not disclosed. Haldyn publishes no utilisation percentage anywhere. It can only be inferred — 445 TPD flat out is roughly 162,000 tonnes a year, and CARE credits the H1 FY25 revenue jump explicitly to "increased utilisation of the production capacity", so the record June 2026 quarter is almost certainly the hardest the plant has ever run. But **the number itself is a blank in the public record**, and that is a disclosure failure, not an analytical subtlety.

Rebuild status. The large furnace was rebuilt in 2023 and is early in life. The smaller 160 TPD furnace is the ageing one — and the ₹150 crore plan approved 3 August 2026 is explicitly "rebuilding, modernising and expanding", so **the next rebuild has been announced and starts now**, with ~+75 TPD attached. Expect disrupted production somewhere in FY28.

End-market split. Liquor ~70% of revenue; the other ~30% FMCG, food and non-alcoholic beverage, pharmaceuticals and cosmetics. Management stated an intention to cut liquor to ~50% within two years. Exports were 28% of sales in FY24, falling to 17% in H1 FY25 — Africa, Nepal, Sri Lanka, with one line dedicated to premium glass aimed at the US. Top ten customers were 65% of sales in FY24 (72% in FY23). **All from CARE's January 2025 release — no updated split has been published for FY25, FY26 or Q1 FY27.**

Competition and substitution. Hindusthan National Glass, historically the largest at 13 furnaces and ~4,300 TPD, has just been resolved out of insolvency to INSCO after a Supreme Court ruling — a weakened competitor about to be recapitalised. AGI Greenpac, the number two, is building a 500 TPD greenfield plant at Gwalior for commissioning by March 2027; that one new plant is bigger than all of Haldyn. Haldyn's ~445 TPD is roughly 3–4% of an Indian market of about 4.5 million tonnes in 2026 growing near 4.75% a year. **PET** (polyethylene terephthalate — clear plastic bottles) already owns carbonated soft drinks and keeps getting cheaper as recycled-PET capacity scales under the 30%-rising-to-60% recycled-content mandate; aluminium cans are taking beer share. Glass holds where the product is premium or hot-filled — which is why Haldyn's move upmarket matters more than volume growth.

3 Earning-trigger thesis

The trigger in one paragraph

Haldyn spent ₹207 crore — over a quarter of its market value — rebuilding and enlarging its main furnace between FY23 and FY25, funded largely by ₹123 crore of debt. For two years shareholders saw the cost and not the benefit: revenue grew while net profit went *backwards* in FY25. FY26, and especially Q1 FY27, is the first evidence the arithmetic has flipped — more capacity, a richer mix including new amber beer bottles, and an interest bill shrinking every quarter. **The trigger is operating leverage on an asset already built and already paid for.** The complication is that management has just announced the next ₹150 crore rebuild, restarting the same cycle.

Trigger	What the public record says	Evidence so far	Horizon	Strength
Operating leverage from the rebuilt 285 TPD furnace	Capacity lifted 350→445 TPD; CARE credits a 54% H1 FY25 revenue jump to higher utilisation.	Revenue ₹299 cr (FY24) → ₹382 → ₹464 cr; EBITDA ₹40 → ₹54 → ₹62 cr; Q1 FY27 margin 15.7%, best in seven quarters. Delivered, not promised.	Happening now	Strong
Falling interest as the capex loan amortises	₹123 cr term loan; CARE flagged repayments of ₹8.8 cr in FY25 rising to ₹18.1 cr in FY26, with "no major debt-funded capex planned in medium term".	Borrowings ₹128→₹116 cr; quarterly interest ₹3.9→₹2.9 cr; gearing 0.59x→0.50x — about ₹1 crore a quarter straight to profit. But that "no major capex" assurance is now void.	12–24 months, then reverses	Moderate
Premiumisation and product mix	One line dedicated to premium containers for premium liquor, food, candle jars, cosmetics and perfume; coloured beer bottles	Margin structurally re-rated from 8–9% (FY22–23) to 13–15%. CARE attributes the H1 FY25 margin gain specifically to "product premiumisation after capex and	2–3 years	Strong

	started FY26; a line aimed at the US.	getting orders from top brands". The most durable part of the story.		
Diversifying away from liquor; exports	Liquor 70% of revenue with a stated plan to reach ~50% in two years; exports 28% of FY24 sales.	Weak and partly contradicted. Exports fell to 17% in H1 FY25. No liquor share published for FY25, FY26 or Q1 FY27, so the 50% goal cannot be checked at all. The FY26 report offers US-tariff commentary and hope, not numbers.	Unclear	Weak
The ₹150 cr rebuild-and-expand (+75 TPD)	Approved 3 Aug 2026, 12-month build, internal accruals plus debt; would take capacity to roughly 520 TPD.	Nothing yet — announced 18 days before this report. Two cautions: the last such project landed at ₹207 cr against a ₹150–175 cr estimate, and the last rebuild cost 90 days of one furnace's output. A rebuild year is usually a bad profit year.	FY28 upside, disruption first	Moderate

The three risks that matter most. Energy: fuel is ~25% of cost. Haldyn switches between furnace oil and natural gas to chase the cheaper one, and CARE confirms it passes input-cost changes on — but "with a lag", so a gas spike hits Haldyn's margin for a quarter or two before the price rise reaches the customer. In March 2026 non-priority industries got only 70–80% of normal gas, about a third of India's container-glass units idled and the industry lost an estimated ₹100 crore of revenue in a fortnight; Haldyn's Q4 FY26 margin nonetheless held at 14.6%, which says its fuel flexibility is real. **Working capital:** fund-based limits ran ~90% drawn through 2024, gross current assets stretched to 177 days in FY24 and the current ratio was 0.92x — below one. FY26 improved sharply, but this company runs tight and a ₹150 crore project will tighten it again. **Supply:** a recapitalised HNG plus AGI Greenpac's new 500 TPD Gwalior plant mean materially more industry capacity arriving in FY28.

4 Management consistency scorecard

Read this first

This scorecard is weaker than it would be for a company that holds earnings calls, and should be discounted accordingly. Every "promised or stated" item below comes from an annual report, a board outcome filed with the exchanges, or from what management told a credit-rating analyst behind closed doors — **not** from a public forum where an analyst could push back, demand the number management left out, or return next quarter and ask why a target slipped. Annual reports are written to be defensible; concalls are where stories break. Without them, a promise quietly abandoned simply disappears rather than being contested. **Treat these verdicts as directional only.**

Period	Promised / stated	What happened	Verdict
FY23–FY25 Capex programme	Rebuild and upgrade the main furnace, 350→445 TPD, and enter premium containers. Initial estimate ₹150 crore, later ₹175 crore. A 90-day partial shutdown was flagged in advance as the reason revenue would dip.	Delivered on capability, overspent on cost. Commissioned Sept 2023, balance Q1 FY25, plus ₹11 cr more in Dec 2024. Final cost ₹207 crore — about 38% above the original estimate. The disruption itself came in exactly as flagged: revenue fell ₹320→₹299 cr while operating profit still rose ₹30→₹40 cr.	Partly kept Plant works, margin re-rated, bad news pre-announced honestly. The budget did not hold.
Jan 2025 Post-capex ramp	CARE's "Stable" outlook rested on management's expectation of sustained growth in scale and profitability from the enhanced capacity.	Comfortably delivered: revenue ₹382→₹464 cr, EBITDA ₹54→₹62 cr, the board calling FY26 the best turnover and EBITDA year in company history, and Q1 FY27 a fresh record on top.	Kept The clearest win on this card.
Jan 2025 Balance sheet	Capital structure and debt cover to "gradually improve" on scheduled repayments, with "no major debt-funded capex planned in medium term" .	The deleveraging happened — debt ₹128→₹116 cr, gearing 0.59x→0.50x, quarterly interest down a full crore. Then on 3 Aug 2026 the board approved a ₹150 crore part-debt-funded project. Eighteen months is not a medium term.	Mixed Did what was said, then changed the plan. Defensible if demand is strong — but it was said, and it changed.
FY24–FY26 Cut liquor to ~50%; grow exports	Liquor was 70% of revenue, to be brought to ~50% within two years; exports (28% of FY24 sales) to be a diversification engine, with a line dedicated to premium US-market glass.	Unverifiable on liquor, negative on exports. The two years have passed with no segment or end-market split published for FY25, FY26 or Q1 FY27 in any document located — nobody can check, and with no earnings call nobody has been able to ask. Exports meanwhile fell to 17% in H1 FY25 and no figure has been given since.	Cannot be checked / not delivered A concrete two-year target went dark. Score against

disclosure as much as performance.

FY15–FY26 Dividend & succession	No formal dividend policy, but a consistent practice of paying out a fifth to a third of profit; and an orderly handover to the next generation.	Dividend paid every year for at least twelve years, payout 19–40%, held at ₹0.70 for FY26 in the same year ₹150 crore of capex was committed. Succession executed on the record and on schedule. Promoter holding crept 58.14%→59.14% over four quarters — the family is buying, not selling.	Kept
Ongoing Shareholder communication	Nothing was ever promised here.	No earnings calls, no investor presentations, no published capacity-utilisation figure, no end-market split since FY24. A listed company with roughly 20,600 shareholders gives them no forum in which to question management — and the shareholder count has fallen every year while the promoter stake rises.	Poor Legal, common among Indian small caps, and still a real cost to the minority holder.

Pattern. On things you can photograph — a furnace, a tonnage, a dividend cheque, a revenue line — this management does what it says. On things that require publishing an inconvenient percentage — utilisation, the liquor share, the export share, final cost against original budget — the number tends not to appear, or appears only because a rating agency asked. That is a specific and useful read: **an operationally competent, disclosure-shy family business**.

5 Bottom line

EARNING TRIGGER: YES — real, visible, and already partly in the numbers

This is not a forecast, it is arithmetic working through the accounts. Haldyn put ₹207 crore of new plant into a company then earning ₹30 crore of EBITDA, financed most of it with debt, and spent FY24 and FY25 wearing the cost: revenue rose 28% while net profit *fell* from ₹19 crore to ₹13 crore as interest tripled and depreciation quadrupled. Those charges are now fixed or falling — depreciation a settled ~₹30 crore a year, interest down from ₹3.9 crore a quarter to ₹2.9 crore — while revenue and margin climb on premium and now amber-glass product. Q1 FY27 is what conversion looks like: record revenue of ₹138.7 crore, the best margin in seven quarters at 15.7%, net profit more than doubling to ₹9.2 crore standalone, and FY26 operating cash flow of ₹62 crore matching reported EBITDA rupee for rupee. Against that: liquor is still ~70% of the book, one plant in one state carries all the operating risk, fuel is a quarter of cost and passes through only with a lag, and the ₹150 crore rebuild approved on 3 August 2026 will almost certainly cost a slice of FY28 production while re-levering a balance sheet only just repaired. The trigger is genuine and turning — but the clear window before the next rebuild disrupts it is narrow, perhaps six to eight quarters.

MANAGEMENT CONSISTENCY: MIXED — competent operators, poor communicators, largely untested

On execution this team scores well: they rebuilt a furnace with a German technology partner, warned the market in advance it would cost 90 days of output, delivered the capacity, converted it into two consecutive record years, cut debt and gearing while doing so, kept the dividend unbroken for over a decade, and handed the managing directorship to the next generation on a published timetable while buying more stock themselves. On candour they score badly: a ₹150 crore budget became ₹207 crore; an assurance of "no major debt-funded capex in the medium term" lasted eighteen months; the concrete two-year promise to cut liquor from 70% to 50% of revenue has never been reported on; exports fell from 28% to 17% and have not been updated since; and capacity utilisation — the single most important operating number in a furnace business — appears nowhere in any public document. **The evidence limitation is the point.** Every statement scored above came from an annual report, an exchange filing, or a private conversation with a rating analyst. Because Haldyn holds no earnings calls, no analyst has ever been able to ask on the record what utilisation is running at, why the liquor target went quiet, or what the new rebuild will cost in lost tonnes. Where a concall-covered company earns a verdict, this one can only earn an inference. The financial spine is strong enough that the inference leans favourable — but **the confidence attached must be lower than for any comparable company that faces its shareholders once a quarter**, and a position should be sized with that discount explicitly in mind.

What could not be obtained. No transcript or investor presentation exists. Capacity utilisation, current end-market split, current export share, current customer concentration and the FY26/FY27 segment mix are all undisclosed. The January 2026 CARE rating action is listed on Screener but could not be retrieved, so all rating-agency operating detail here is from January 2025 and is eighteen to twenty months old.
