Vijaya Diagnostic Centre Ltd: Concall Tracker

NSE: VIJAYA | BSE: 543350 | Quarter: Q1 2027 (Apr to Jun 2026) | Builds on the Q4-2026 report | Newest call read: Q1 FY27, 7 Aug 2026

1. Snapshot

What it does: Vijaya runs a chain of medical-testing centres, mostly in South India, where a walk-in patient can get blood and lab tests (pathology) and scans like X-ray, CT, MRI and PET-CT (radiology) under one roof. Nearly all its money comes straight from patients, not from hospital or corporate contracts.

Figure	Value	Plain read
Market value	₹15,176 cr	What the stock market prices the whole company at today (early Nov 2026).
Price to earnings (P/E)	~73	You pay about ₹73 for every ₹1 of yearly profit. That's expensive, so the market already expects years of strong growth.
FY26 revenue	₹814 cr	Last full year's sales, up about a fifth on the year before.
Q1 FY27 revenue	~₹231 cr	Sales for Apr to Jun 2026, up 22.8% on a year ago. Most of it came from more tests, not higher prices.
Q1 FY27 operating profit (EBITDA*)	₹98 cr, 42.7% margin	Keeps about 43 paise of every rupee before interest, tax and wear-and-tear. Up 34% on the year.
Q1 FY27 net profit	₹53 cr	Final take-home profit, up 37.6%. Profit is growing faster than sales.
Surplus cash	~₹330 cr	Cash in hand after debts. Expansion is paid for from its own pocket.
Return on capital (ROCE)	21.5%	Earns about ₹21 a year on every ₹100 tied up in the business. Healthy for a scanner-heavy model.

*EBITDA = operating profit before interest, tax, depreciation and amortisation.

2. Concall coverage

Quarter(s)	Call date	How it was used
Q1 FY24 to Q3 FY26 (11 calls)	Aug 2023 to Feb 2026	Carried forward from the Q4-2026 report
Q4 FY26 (prior boundary)	8 May 2026	Read in the Q4-2026 report; used for tone continuity
Q1 FY27	**7 Aug 2026**	**Newly deep-read in full ★**

Only the Q1 FY27 call was read in full this time. The three-year backstory comes from the Q4-2026 report. Calls held after 30 Sep 2026 are left for the next report.

Latest concall highlights: Q1 FY27 (7 Aug 2026)

- **Growth stayed above 20%.** Revenue up 22.8% with test volumes up 16.5%. So most of the growth is more patients and tests, the rest is a richer test mix. Hyderabad, the oldest and biggest market (67% of sales), still grew 17%.
- **Margins went up, not down.** Operating margin 42.7%, up 3.6 points on last year, even though ten new hubs opened in FY26. The few hubs not yet at break-even cost under ₹1 cr in the quarter, about half a percent of sales.
- **Bigger expansion plan for FY27.** Nine new hubs and 10 to 12 spokes this year (up from the 4 to 5 hubs talked about in May), plus a large reference lab at Panjagutta, Hyderabad and a land buy in Andhra. Capex now ₹190 to 195 cr, up from ₹140 to 150 cr. Two hubs (Gachibowli in Hyderabad and a flagship at JP Nagar, Bengaluru, ~₹30 cr) and six spokes are already open.
- **Pune is finally moving.** The Pune business (the PH acquisition) grew about 18%, versus roughly 8% at the time of our last report. A big new hub with a full lab is planned there this year.
- **Tone:** confident. The returning CFO said FY27 should see "high double digit" growth, and that 15% a year over three to five years is "easy". Official margin promise stays at "above 40%".

Business mix & capacity

Domestic vs export: 100% India, no exports. Direct patients (B2C) make up 92% of revenue. Hyderabad 67%, rest of Andhra and Telangana 20%, Pune 6%, West Bengal 4%, other 3%. Radiology is 37% of revenue, wellness packages about 15%.
Capacity: Management doesn't give a single utilisation number. 166 centres (51 hubs, 115 spokes). Mature centres still grew 16% without new capacity, and new hubs mostly broke even within a year, so there's room to fill existing centres before more capacity is needed.

Since our last report

Builds on the Q4-2026 report (boundary call 8 May 2026). Prior verdicts: **Trigger YES**, **Consistency YES**.

Prior read	What we said then	What the new call shows	Movement
Trigger: hub-and-spoke rollout	Proven recipe, new hubs breaking even early	Growth held above 20%, margin up, burn from new hubs tiny. Plan stepped up to nine hubs	Confirmed
Consistency	Says what it'll do, then does slightly better	Again beat its own "40%+" margin line and the ~15% growth line	Confirmed
Pune (PH) slow at ~8%	Slowest leg, tripling target not visible	~18% growth, big new hub planned this year	Improving
FY27 capex ₹140 to 150 cr	4 to 5 hubs, 10 to 12 spokes, central lab	Raised to ₹190 to 195 cr, nine hubs. Bigger bet, still self-funded	Upgraded
Genomics start	Long-term, no near-term revenue	Not discussed on this call	No update

Verdict change: both verdicts unchanged. Nothing in the call weakened the thesis, and the faster Pune growth patches the one soft spot from last time. The new risk is a heavier opening calendar, which management says will be staggered to avoid a margin dip.

3. Earning Trigger thesis ★

Same driver as always: open a big hub with a full lab and high-end scanners, let it fill with walk-in patients, then ring it with small spoke centres. Hyderabad keeps growing double digits on its own, while the same recipe gets copied into tier-2 towns in Andhra and Telangana, Bengaluru, Kolkata and Pune. Once a hub breaks even, most extra revenue drops straight to profit because 60 to 70% of costs are fixed and lab materials cost only about 11% of sales. That's why margin rises as the network grows.

Trigger	What management said	Evidence so far	Horizon	Strength	Change since last report
New-city hub rollout (Bengaluru, Kolkata, Pune)	15 hubs across the three new metros over two years; Karnataka is the next core state	Both early Bengaluru hubs broke even in year one; JP Nagar flagship opened in July	2 to 5 yrs	Strong	↑ plan enlarged
Share gains in Hyderabad	Keeps growing above the market	Hyderabad +17%, spokes older than five years grew in high double digits	Ongoing	Strong	Unchanged
Operating leverage	Above 40% margin even with expansion	42.7% this quarter, new-hub drag ~0.5%	Proven	Strong	Unchanged
Wellness packages	Not pushed, growing on its own, now includes MRI and cardiac CT screening	About 15% of revenue, up from ~8% before Covid; raises spend per patient	Ongoing	Moderate	↑ new detail
Pune (PH acquisition)	Growth to pick up once new hub and lab come up	~18% growth, still 6% of sales	1 to 3 yrs	Moderate	↑ from ~8% growth

4. Management Consistency scorecard

Period	What was promised	What actually happened	Verdict
FY24 to FY26 (backstory)	~15% growth, ~40% margin, new hubs break even within a year	17% five-year growth, margin held 39 to 43%, hubs broke even in two to three quarters	Delivered
May 2026 (Q4 FY26)	Keep margin "40%+" while opening more centres	Q1 FY27 margin 42.7%	Delivered
May 2026	FY27 network additions and central lab	Two hubs and six spokes already open by early August; plan widened to nine hubs	On track
Dec 2023 onward	Pune (PH) revenue to roughly triple in four to five years	Growth up to ~18%, still far from a triple	Partly
Aug 2026 (new)	"High double digit" growth in FY27; 15% a year for three to five years	Q1 grew 22.8%	Too early

Narrative drift: none worth flagging. Same model, same discipline, same "avoid low-price hospital and government work" line. The one change is scale: after last year's hubs worked, they're doubling down with more hubs this year. The old CFO returning adds continuity rather than a new story. Price rises are small (last one June 2025, Hyderabad only), so growth isn't being bought with pricing.

5. Bottom line

Durable earning trigger? YES

vs last quarter: unchanged

Nothing moved it down, and Pune picking up nudges it further up. The network keeps growing above 20% on more tests, not price, and margins rise as new hubs mature. The FY27 plan is bigger, funded from its own cash, and the hubs opened last year have already shown the recipe works outside Hyderabad. The watch item is execution risk from opening nine hubs in a year, plus a share price that already prices in a lot.

Management consistent? YES

vs last quarter: unchanged

Another quarter where results beat the line management set. The margin floor held with room to spare, the network additions are on schedule, and they're open about what's slow (Pune) and what's still a small bet. They keep the official margin guide conservative even when they clearly beat it.
