# Jay Bharat Maruti Ltd

Concall tracker, Q2 FY27 (quarter to Sep 2026) | NSE: JAYBARMARU | Filed under Q2-2027

## 1. Snapshot

Jay Bharat Maruti (JBML) is the flagship company of the JBM Group, set up in 1987 as a joint venture with Maruti Suzuki. It presses and welds car body parts (body-in-white panels, welded assemblies), and makes exhaust systems, fuel fillers, suspension parts and press tooling. Maruti Suzuki is its main customer, and it builds plants next to Maruti's.

| Number | Value | Plain read |
|---|---|---|
| Market cap | about Rs 1,351 cr | A small company; the market values the whole business at roughly half a year's sales. |
| FY26 sales | Rs 2,551 cr (+11%) | Sales went nowhere for three years (FY23 to FY25) and then picked up as new Maruti plants filled. |
| Last 12 months sales | Rs 2,862 cr | Growth sped up to about a fifth in the latest twelve months. |
| FY26 net profit | about Rs 138 cr | Four times FY25, but a big part was one-offs: a tax-regime switch (Rs 37 cr) and a state GST incentive for the J5 plant (about Rs 36 cr), both booked in the March quarter. |
| Operating margin | 7% FY25, 11% FY26, 9% Q2 FY27 | Profit per rupee of sales jumped in FY26 partly on the incentive; the latest quarter slipped back to about where it was a year ago. |
| Borrowings | about Rs 528 cr | Debt more than doubled since FY20 to fund the new plants; roughly two years of operating profit. |
| Promoter holding | 59.35%, unchanged | No buying or selling by promoters. |

## 2. Concall coverage

**No concall transcripts were available on Screener (no calls are listed at all), and none were found on the exchanges. This report is based on a global web deep-dive.** With no calls, there's no record of management promising things and then being checked on them, so the consistency read leans on company filings and press coverage.

Sources used: Screener financial tables (quarterly and annual results, balance sheet, shareholding); Autocar Pro on Q2 FY27 results (Oct 2026); Machinist and DSIJ on the board's Rs 170 cr Phase II approval at Kharkhoda (6 Feb 2026) and the May 2023 capex plan; Sahi / DSIJ / Arihant coverage of Q4 FY26 results (May 2026) including the tax and GST incentive one-offs; Maruti Suzuki press coverage on its Kharkhoda and Gujarat capacity plans.

**Latest update highlights: Q2 FY27 results (Oct 2026, from the results filing as reported by Autocar Pro)**

- Sales Rs 823 cr, up about 41% on a year ago and 31% on the June quarter. Plain read: the biggest jump in years, from higher volumes across its parts lines.
- Net profit Rs 31 cr, up about 73%. Plain read: a genuine operating quarter, no tax one-off this time, though profit is also helped by the lower tax rate it moved to from April 2026.
- Raw material cost rose about 50%, faster than sales. Plain read: steel got costlier and margins slipped to about 9% from 10% in June and 12% in March.

- Mayank Varma was re-designated Chief Executive Officer over both the tooling and auto components divisions.

**Business mix & capacity.** Domestic vs export split: not broken out; the business is almost entirely domestic supply to Maruti Suzuki. Capacity utilisation: not disclosed. Expansion: the May 2023 plan funded two new plants in Haryana and Gujarat for Maruti (about Rs 350 cr); Phase II of plant J7 at IMT Kharkhoda (about Rs 170 cr, approved Feb 2026) is under way, with no start date given.

## 3. Earning trigger thesis

The earnings driver is simple: JBML grows when Maruti grows, and Maruti is adding capacity faster than ever. Maruti opened its second Kharkhoda plant in May 2026, has a third approved there for 2029, and is expanding in Gujarat. JBML built plants next to these sites (J5 and J7) and is now adding Phase II at Kharkhoda. The September quarter's jump in sales looks like the first real payoff of that.

| Trigger | What the company said | Evidence so far | Time horizon | Strength |
|---|---|---|---|---|
| New plants next to Maruti's new sites | Capex for two plants in Haryana and Gujarat to serve Maruti demand; Phase II at Kharkhoda approved Feb 2026 | Sales up 41% in Q2 FY27 after three flat years | FY27 to FY29 | Moderate: the volume is showing, but margins aren't |
| Lower tax rate | Moved to the concessional tax regime from Apr 2026 | Tax rate falls from about 35% to about 25% | From FY27 | Strong but one-time: lifts profit level once |
| GST incentive for J5 plant | Incentive of about Rs 36 cr accrued in Q4 FY26 | Booked once in March quarter | Unclear if recurring | Weak: it's a subsidy, not the business |

## 3b. Trigger check

| Trigger type | Yes/ No | What was said (date) |
|---|---|---|
| Debt cut | No | Borrowings flat at a high level; no plan stated. |
| New business | No | Same customer and products. |
| Margin up | No | Q2 FY27 margin fell as raw materials rose faster than sales (Oct 2026). |
| New management | Yes | Mayank Varma re-designated CEO over tooling and auto components (Oct 2026). |
| New capacity | Yes | Board approved about Rs 170 cr for Phase II of plant J7 at IMT Kharkhoda, Sonipat (6 Feb 2026). |
| Big orders | No | No order book disclosed. |
| Turnaround | No | Profitable throughout. |
| Promoter buying | No | Holding unchanged at 59.35%. |

**The single concrete driver:** new body-part plants built next to Maruti Suzuki's new Kharkhoda and Gujarat car plants, with Phase II at Kharkhoda under way.

## 3c. Margin bridge

Operating margin was about 9% in Q2 FY27, the same as a year ago but down from 12% in March and 10% in June. The March peak was flattered by the J5 GST incentive; this quarter raw materials (mostly steel) rose about 50% while sales rose 41%, so the extra volume didn't widen the margin. No management comment says whether the cost pass-through to Maruti will catch up. (one-off)

## 3d. Management changes

Mayank Varma was re-designated Chief Executive Officer in October 2026, now overseeing both the tooling and auto components divisions. The filings give no background or plan from him.

## 4. Management consistency scorecard

| Period | What was promised | What actually happened | Verdict |
|---|---|---|---|
| May 2023 | Two new plants in Haryana and Gujarat for Maruti demand, about Rs 350 cr | Plants built; about Rs 40 cr unspent and rolled into Kharkhoda Phase II | Delivered |
| FY24 to FY25 | Growth from new plants (implied by the capex) | Sales flat for two years while debt rose | Partly |
| FY26 to H1 FY27 | Volumes to follow Maruti's ramp | Sales up 11% in FY26 and 41% in Q2 FY27 | Delivered |
| Feb 2026 | Kharkhoda Phase II, no date | Under way | Too-early |

Narrative drift: there's hardly any narrative, which is the problem. The company holds no earnings calls and gives no guidance, so there's nothing to drift from. What it said it would build, it built, inside the money it said it would spend. The weak spot is the long wait between spending and growth, and debt that stayed high.

## 5. Bottom line

### Durable earning trigger? MAYBE

The link to Maruti's biggest-ever capacity build is real, and the September quarter finally showed volumes. But margins didn't move, part of last year's profit jump was a one-time incentive and tax change, and with no calls there's no guidance to test. It's a volume story riding one customer's capex.

### Management consistent? MAYBE

It did what it disclosed on capex, on budget. But with no concalls and no targets, there's very little record to judge, and the company doesn't explain its numbers to shareholders.

**6. Checkpoints for next quarter**

- Sales keep growing strongly on a year ago in the December quarter
- Operating margin climbs back above the September quarter level
- Kharkhoda Phase II start date or first production is disclosed
