Vidya Wires Ltd

Concall Tracker · Q2 FY2027 (quarter ended 30 Sep 2026) · NSE: VIDYAWIRES · BSE: 544633 · Report prepared 7 Nov 2026

Not investment advice. Do your own due diligence. An AI-generated reading of the company's public concall transcripts and filings. This report continues from our Q4-2026 report (no Q1 FY27 call transcript was published).

1. Snapshot

What it does: Vidya Wires makes winding wires: enamelled and paper-covered copper and aluminium wires and strips, busbars and solar PV ribbon. They go inside transformers, motors, solar modules and electrical gear. Two plants at Anand, Gujarat, plus the new ALCU plant funded by its December 2025 IPO. It earns a processing charge on top of the metal price, so revenue swings with copper.

Measure	Value	Plain read
Market cap	₹1,442 cr	What the whole company is worth on the market. Small-cap.
Q2 FY27 revenue (consolidated)	₹581 cr (+52.5% YoY)	Up about half on last year and about 6% on Q1. Much of it is dearer copper; volume rose only about 4-5%.
Q2 operating profit (EBITDA)	₹24 cr, margin ~4%	About 4 paise per rupee of sales. Thin, as always in metal pass-through businesses.
Q2 net profit	₹14.8 cr	A bit below Q1 as new-plant fixed costs arrived before the volume.
H1 profit per kg (EBITDA/kg)	₹59 vs ₹44 a year ago	The measure that matters here, as it strips out the copper price. Up about a third on the half-year, though analysts worked out Q2 was below Q1.
ALCU share of revenue	~₹110 cr in Q2 (₹60 cr in Q1)	The new plant now makes close to a fifth of sales.
P/E	~20	The price is about 20 years of current profit.

2. Concall coverage

Quarter	Date	Transcript read?
Q2 FY26 (maiden call)	24 Dec 2025	Carried forward from Q4-2026 report
Q4 FY26 (prior boundary)	14 May 2026	Carried forward from Q4-2026 report
Q1 FY27	Aug 2026	No transcript published anywhere
Q2 FY27	5 Nov 2026	Newly deep-read in full ★ (NSE filing, 7 Nov 2026)

Only three calls exist since listing, so the consistency record is still short.

★ Latest concall highlights — Q2 FY27 (5 Nov 2026)

- **Results:** revenue ₹581 cr, up 52.5%; H1 revenue ₹1,131 cr, up 43%; H1 profit ₹32 cr against ₹22.5 cr. Volume up only about 4-5%.
- **Capacity slipped:** the full 18,000 tonnes at ALCU was meant to be installed before Diwali. Only 10,000-11,000 tonnes are in; the rest "before mid-December" or "by January". The MD: "a little execution time has been taking more".
- **New products:** copper lines at ALCU ramping; aluminium lines in customer approval, volumes from end of Q3. CTC (conductors for big power transformers) trial production by mid-December, revenue from Q4.
- **Exports started from ALCU:** first shipments to Israel and Nepal; PV ribbon also going to a US client. Target is still exports at a quarter of revenue.
- **Tone:** positive but vague. No volume numbers given despite repeated asks; EBITDA per kg hoped at ₹60-65. A ₹50 cr tax demand has come down to "a very small amount".

Business mix & capacity. Domestic ~88% / exports ~12% by volume (FY26; not updated on this call). Old plants run at about 90%. ALCU: 10,000-11,000 of its 18,000 tonnes installed; the rest due by mid-December to January. Utilisation at ALCU not disclosed; copper lines "a healthy share of their capacity".

★ Since our last report (builds on the Q4-2026 report, call of 14 May 2026)

Prior verdicts: **Trigger MAYBE · Consistency MAYBE (too early).**

Prior read	What we said then	What the new call shows	Movement
Trigger	Real plant, earnings still ahead	ALCU now ~a fifth of revenue and EBITDA/kg up on the half-year	Improving
Consistency	Hard promises kept, soft ones slipping	Capacity date missed; no volume data; vague on guidance	Slipping
Full capacity by Diwali	~36,000-37,680 t total by October	Only 10-11k of 18k installed at ALCU	Slipping
CTC this year	Contribution zero; starts after October	Trial run by mid-December, revenue from Q4	On-track
Exports to rise	Share had slipped to ~12%	First ALCU export shipments; share not given	Improving
Better margin per tonne	Claimed, not shown	H1 ₹59/kg vs ₹44; but Q2 below Q1	Improving

The prior report had no checkpoints box. **Checkpoint results: n/a (no stored checkpoints)**.

Verdict change: trigger unchanged (MAYBE), with the margin per kg now actually moving; consistency unchanged (MAYBE), dragged by the missed installation date.

★ 3. Earning-trigger thesis

The driver is the IPO-funded ALCU plant, which nearly doubles capacity and adds costlier products: aluminium enamelled wire, paper-covered aluminium strip, PV ribbon, copper busbars and foils, and soon CTC for large power transformers. More tonnes plus a richer mix should lift profit per kg. Half of that is now showing: profit per kg is up and ALCU is selling. The other half, real volume growth, hasn't come yet, and the installation is running late.

Trigger	What management said	Evidence so far	Horizon	Strength	Change since last report
ALCU capacity	Full 18,000 t by mid-Dec/Jan; 100% operational in FY28	10-11k t installed; volume up only 4-5%	FY27-28	Moderate	↓ late
Richer mix / EBITDA per kg	₹59/kg now, hoping ₹60-65	Up a third on H1; dipped QoQ on fixed costs	Now	Moderate	↑
CTC for power transformers	Trial by mid-Dec, revenue Q4; HVDC later (6-9 months more)	Plant "close to complete"	Q4 FY27	Unproven	Unchanged
Exports to 25%	Long-run aim	First shipments to Israel, Nepal, US	Multi-year	Weak	↑ small

3b. Trigger check

Trigger type	Yes/ No	What was said (date)
Debt cut	No	Not discussed this call

New business	Yes	"We have started exports from ALCU. The first shipments have gone to Israel and Nepal"; CTC from Q4 (5 Nov 2026)
Margin up	Yes	"We are at EBITDA per kg of Rs.59 ... last half-year FY2026 it was around Rs.44" (5 Nov 2026)
New management	No	Not mentioned
New capacity	Yes	ALCU copper lines ramping; balance capacity "before mid-December"; CTC trial by mid-December (5 Nov 2026)
Big orders	No	Data-centre busbar orders mentioned, no order book
Turnaround	No	Not mentioned
Promoter buying	No	Not mentioned

Single concrete driver: the new ALCU plant's costlier products (aluminium wire, PV ribbon, busbars, and CTC from Q4) lifting profit per kg.

3c. Margin bridge

On the percentage line the margin looks flat at about 4%, because dearer copper inflates sales. Per kg it's up from ₹44 to ₹59 on the half-year thanks to ALCU's richer products. Q2 dipped from Q1 as the new plant's fixed costs landed before its volume. Management expects it to keep rising. (lasting)

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
Dec 2025	New plant starts in Q4 FY26	Started 7 Feb 2026	Delivered
Dec 2025	₹100 cr of IPO money to repay debt	Done; interest cost now near zero	Delivered
May 2026	Full capacity installed before Diwali	10-11k of 18k t installed; rest by mid-Dec/Jan	Missed
May 2026	Better EBITDA per tonne from new products	H1 ₹59/kg vs ₹44	Delivered
Sep 2026 AGM	Start CTC this year	Trial by mid-December	Too-early
Dec 2025	Exports toward 22-25%	First ALCU shipments; share not given	Too-early

Narrative drift. The story hasn't changed: ALCU, mix, transformers and renewables. What's new is a missed date on the install and a refusal to give volume numbers, which two analysts pushed on. The MD promised to add volume data to the presentations.

5. Bottom line

Durable earning trigger? → MAYBE vs last quarter: unchanged

Closer to a Yes than last time: profit per kg is clearly up and ALCU is already a fifth of sales. But tonnes barely grew, the plant isn't fully installed and CTC hasn't started, so the earnings jump is still a promise for H2 and FY28.

Management consistent? → MAYBE vs last quarter: unchanged

The plant start and debt repayment were delivered; the before-Diwali install was missed by a couple of months. Not hiding numbers would help: no volume data and no guidance makes the promises hard to check.

> **★ 6. Checkpoints for next quarter**
>
> - All 18,000 tonnes at ALCU installed by January
> - CTC trial production started by mid-December
> - Volume finally grows clearly in Q3, with EBITDA per kg at or above ₹59
