Mankind Pharma Ltd

Concall tracker report · Q2 2027 (Sep 2026 quarter) · prepared 11 Nov 2026

1. Snapshot

India's big branded-generic drug maker (number one in prescriptions in India per the company), selling acute and chronic medicines through a large field force, plus consumer brands like Manforce and Prega News, and since the Bharat Serums and Vaccines (BSV) acquisition, a specialty business in fertility, critical care and women's health in India and abroad.

- Market cap about Rs 1,10,171 cr: one of the largest Indian pharma companies by market value.
- Q2 FY27 consolidated revenue Rs 4,338 cr, up 17% on a year ago (call figure).
- Q2 FY27 EBITDA (operating profit) Rs 1,175 cr, margin 27.1% vs 25.0% a year ago: it now keeps a bit over a quarter of sales as operating profit.
- Q2 FY27 profit after tax Rs 716 cr, up 37.7%, even though the tax rate rose to about 24% after a tax exemption ended.
- Net debt Rs 2,639 cr at 30 Sep 2026, 0.6x a year's EBITDA: the BSV acquisition debt is coming down; company says it is on track to repay it by FY28.
- Screener's standalone figures (which exclude BSV and subsidiaries) are smaller: Sep 2026 quarter sales Rs 3,145 cr.

2. Concall coverage

Quarter	Date	Transcript read?
Q1 FY25 → Q3 FY26 (8 calls)	Jul 2024 → Feb 2026	Skimmed for guidance and promises
Q4 FY26	20 May 2026	Yes, key sections
Q1 FY27	30 Jul 2026	Yes, key sections
Q2 FY27	26 Oct 2026	Yes, in full ★

About two and a half years of quarterly calls (16 transcripts on Screener, from the Q4 FY23 call). The latest call was read in full.

Latest concall highlights: Q2 FY27 (26 Oct 2026)

- Revenue up 17%, EBITDA up 27%, margin 27.1%: a clean beat on margin, though management kept its full-year margin guidance of 25.5-26.5%.
- Domestic prescription business back ahead of the market: secondary sales up 15.7% vs the Indian pharma market (IPM) at 14.2%; volume growth climbed from 0.5% in FY25 to 6.2% this quarter.
- Chronic share (excluding BSV) 37.4%, up 80 bps; target is 50% in four to five years. New divisions in cardio, gastro and dental are being set up.
- International up 33% (above the 20% constant-currency guidance, helped by currency); BSV grew 34%.
- The weak spot: consumer healthcare. H1 growth only 2.6%; full-year now expected at single digits, below the earlier high-single to low-double-digit guidance. The MD said bluntly he is unhappy and will change the leadership team there. Also bought a 70% stake in Armed Cell Therapeutics (CAR-T cell therapy), funded to about FY28.

Business mix & capacity

- Domestic vs export: domestic Rs 3,657 cr vs international Rs 680 cr in Q2 FY27, so roughly 84% India / 16% abroad. US and other branded markets are now about equal within international.
- Capacity utilization: not disclosed. Capex guidance 6-7% of revenue for FY27; H1 ran at about 4.9%.

3. Earning trigger thesis

After a weak FY26, when field-force and leadership changes hurt volumes, Mankind's domestic engine is growing faster than the market again, led by chronic medicines (cardiac, diabetes, respiratory) and a recovery in gastro and vitamins. BSV's specialty brands are growing fast in India and abroad, and the acquisition debt is being paid down, which cuts interest cost. Margins are moving up on price increases, a richer chronic mix and scale.

Trigger	What management said	Evidence so far	Time horizon	Strength
Domestic recovery and IPM outperformance	FY27 'much better year'; at least double-digit growth; aim to beat IPM (May 2026)	Q2 FY27 secondary sales 1.1x IPM; volume growth 6.2%	Next 2 quarters (1.1-1.2x IPM)	Strong: now in the numbers
Chronic share to 50%	Add 100-200 bps a year; 50% in 4-5 years	Chronic share rose from about 37% to about 39% for FY26	4-5 years	Moderate: slow and steady
BSV specialty and international	Export growth guidance 20% cc	International +33%, BSV +34% in Q2	Ongoing	Strong
Debt repayment	Repay acquisition debt by FY28; net debt/EBITDA 0.5x for FY27	NCD repaid Q1 FY27; net debt/EBITDA 0.6x at Sep 2026	By FY28	Strong

3b. Trigger check

Trigger type	Yes/ No	What was said (date)
Debt cut	Yes	'We remain on track to repay the acquisition related debt by FY28' (Oct 2026)
New business	Yes	Acquisition of Armed Cell Therapeutics, CAR-T platform (Oct 2026); new cardio, gastro and dental divisions coming
Margin up	Yes	Gross margin up 90 bps on price increases, chronic mix and a low base; EBITDA margin +210 bps (Oct 2026)
New management	No	Leadership changes were in field teams, Philippines and (planned) consumer business, not CEO/ MD/CFO
New capacity	No	Not discussed
Big orders	No	Not applicable
Turnaround	Yes	Volume growth improved from 0.5% in FY25 to 6.2% in Q2 FY27; 'whatever corrections were supposed to happen, they have happened' (Oct 2026)
Promoter buying	No	Promoter stake flat at about 72.6%

Single concrete driver: Domestic prescription business back to growing faster than the market, led by chronic medicines, with BSV specialty growth and debt repayment adding to profit.

3c. Margin bridge

EBITDA margin 27.1% vs 25.0% a year ago. Management splits it: 90 bps from gross margin (price increases, more chronic in the mix, and a low base because Q2 FY26 was hit by the GST rate transition), 40 bps from lower R&D, 80 bps from operating leverage. The low base is one-off; mix and operating leverage are what management says will keep helping. Guidance held at 25.5-26.5% for FY27 (lasting).

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
Q4 FY26 call (May 2026)	FY27 at least double-digit growth, better than FY26	Q2 FY27 revenue +17%, domestic +14.8%	Delivered so far
Q4 FY26 call	EBITDA margin 25.5-26.5% for FY27	H1 FY27 margin 26.7%	Delivered
Q4 FY26 call	Consumer health high single to low double-digit growth	H1 growth 2.6%; now guided at single digits	Missed
FY25-FY26 calls	Repay BSV acquisition debt by FY28	Commercial papers and an NCD tranche repaid; net debt/EBITDA down to 0.6x	On track
FY26 calls (Nov 2025)	Continued outperformance vs IPM	FY26 had a disruption in teams; outperformance only clearly back from Q1-Q2 FY27	Partly

The core story (chronic share to 50%, beat the IPM, BSV specialty, deleverage) has been steady for two years. FY26 was a stumble on domestic volume that management owned up to and has now fixed. Consumer healthcare keeps disappointing and its guidance was cut this quarter.

5. Bottom line

Durable earning trigger? → YES

A concrete, named driver that's now in the numbers: domestic volume recovery and chronic mix, plus BSV and international growth and falling interest cost. The risk is that some of this quarter's growth came off a low base.

Management consistent? → MAYBE

The big promises (margin band, debt path, recovery in FY27) are being kept, but FY26 slipped against what they said, and consumer healthcare guidance was cut this quarter.

6. Checkpoints for next quarter

- Domestic secondary sales keep beating the IPM
- FY27 EBITDA margin lands within the guided band
- Consumer healthcare leadership change is made
