Bajaj Healthcare Ltd

Concall tracker · filed under Q2-2027 · 11 Nov 2026

1. Snapshot

Bajaj Healthcare makes APIs (the active ingredients in medicines) for Indian and export customers and sells finished formulations, including through marketing partners and its own Oncocare oncology brand. It is building peptide, oncology API and new formulation capacity.

- Market cap about Rs 1,095 cr at a P/E of about 19: valued modestly.
- Q2 FY27 revenue Rs 175.9 cr, up 18.9%; PAT Rs 14.1 cr, up 26.9%: profit growing faster than sales.
- H1 FY27 revenue Rs 341.5 cr, up 15.1%; PAT Rs 27.8 cr, up 21.1%: in line with guidance.
- Q2 EBITDA Rs 32.1 cr, margin 18.2%; gross margin 48.3%, down about 2-2.5 points year on year on West Asia-linked costs.
- Formulations Rs 41.7 cr, up about 82%; API exports Rs 62.6 cr, up 28.5%; domestic API Rs 71.6 cr, down from Rs 76.3 cr a year ago. Exports plus formulations are close to 60% of revenue.
- Net worth Rs 557 cr, debt to equity about 0.5; India Ratings upgraded the long-term rating to IND A from A-.

2. Concall coverage

Screener has only two transcripts (Q1 FY27, July 2026 and Q2 FY27, 19 Oct 2026); both were read, the latest in full. The company only recently started regular calls, so the consistency read covers just one quarter of promises.

Quarter / call	Date	Transcript read?
Q1 FY27	Jul 2026	Yes
Q2 FY27	19 Oct 2026	Yes, read in full

2b. Latest concall highlights: Q2 FY27 (19 Oct 2026)

- Formulations rebounded about 82% as management expected after Q1; API exports up 28.5%; domestic API softer in the quarter.
- First company in India to get DCGI approval to make and market Cenobamate (an anti-seizure drug) tablets; launched in September through eight marketing partners, with repeat orders already.
- NCLT approved the GenRx Pharmaceuticals acquisition (Nashik formulation facility). Management sees Rs 200-250 cr potential from it in two to three years.
- Peptide plant (250 kg a year) due by 31 Mar 2027; oncology API plant to start in Q2 FY28; Nashik formulation plant operational by Q1 FY28. FY27 capex Rs 65-80 cr.
- FY27 guidance of 10-15% revenue and profit growth with 18-20% EBITDA margin 'on track'. Aim of Rs 900-1,000 cr revenue by FY29 at 18-21% EBITDA margin.

2c. Business mix & capacity

- Domestic API about 41% / API exports about 36% / formulations about 24% of Q2 FY27 revenue.
- Capacity utilisation: not stated. New capacity coming: peptides (Mar 2027), Nashik formulations (Q1 FY28), oncology API (Q2 FY28).

3. Earning trigger thesis

The shift is from plain domestic APIs, where prices stay under pressure, to exports, formulations and specialty products. That shift is already in the numbers: exports and formulations are near 60% of sales and grew fast this quarter, and Cenobamate gives it a first-in-India product. The bigger bets, peptides, oncology API and GenRx, only start contributing from FY28, and the FY29 target of Rs 900-1,000 cr depends on them.

Trigger	What management said	Evidence so far		Strength

			Time horizon	
Exports and formulations	Grow higher-margin exports and formulations	Formulations up 82%, API exports up 28.5% in Q2	Now	Moderate: one strong quarter after a weak Q1
Cenobamate	First in India; eight partners	Launched Sep 2026, repeat orders	FY27	Unproven in size
Peptide and oncology API plants	Peptides Rs 70-100 cr in first year, oncology about Rs 200 cr in 2-3 years	Plants under construction	FY28-29	Unproven
GenRx Nashik formulations	Rs 200-250 cr in 2-3 years	NCLT approval received	FY28-29	Unproven

3b. Trigger check

Trigger type	Yes/ No	What was said (date)
Debt cut	No	Debt to equity steady at about 0.5
New business	Yes	Peptides for pharma, nutraceutical and cosmetic use; formulation exports vertical (19 Oct 2026)
Margin up	No	Gross margin down about 2-2.5 points; EBITDA margin about 18%
New management	Yes	Appointed COO Shreekumar Nair last year and new heads for institutional sales, global API, R&D, ROW formulations and oncology (19 Oct 2026)
New capacity	Yes	Peptide plant due by 31 Mar 2027; oncology API plant from Q2 FY28; Nashik formulation plant by Q1 FY28 (19 Oct 2026)
Big orders	No	No order book
Turnaround	No	Not applicable
Promoter buying	No	Not said

Single concrete driver: Exports and finished formulations, led this quarter by the first-in-India Cenobamate launch, are growing much faster than the domestic API business and now make up close to 60% of sales.

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
Q1 FY27 call (Jul 2026)	Formulation sales to rebound in Q2	Formulations up about 82% year on year	Delivered
Q1 FY27 call	FY27 revenue and profit growth 10-15%, EBITDA margin 18-20%	H1 revenue up 15%, PAT up 21%, margin about 18%	Delivered (so far)
Q1 FY27 call	GenRx acquisition through NCLT	NCLT approval received	Delivered
Q1 FY27 call	Cenobamate commercial launch	Launched Sep 2026 with eight partners	Delivered

Only two calls exist, so drift can't really be judged. Across both, the story is the same: move up from domestic APIs to exports, formulations and specialty products, backed by new plants. The FY29 target is ambitious relative to today's size.

5. Bottom line

Durable earning trigger? → MAYBE

Exports and formulations are clearly growing and Cenobamate is a real first. But most of the step-up rests on plants that start in FY28 and on approvals that take two to three years, so the big driver is still ahead.

Management consistent? → YES

Everything promised on the July call happened by October. That's one quarter of record, so it's a provisional yes.

6. Checkpoints for next quarter

- Full-year revenue growth of 10-15% with 18-20% EBITDA margin is held
- Peptide plant construction finishes by 31 March 2027
- Formulation sales hold near the September quarter's level
