Navin Fluorine International Ltd

Concall Tracker, Q1 2027 update | Report date: 6 Nov 2026 | Screener ticker: NAVINFLUOR | Builds on the Q4-2026 report

Navin Fluorine is an Indian specialty-chemicals maker built on fluorine chemistry. It sells refrigerant gases and fluorides (the "HPP", High Performance Products, arm), makes complex fluorine molecules for global crop-protection companies (specialty chemicals), and runs a contract-manufacturing arm for global drug makers (CDMO, Contract Development and Manufacturing Organisation). Most of its business comes from multi-year contracts with large overseas customers.

1. Snapshot

Measure	Value	Plain-English read
Market value	₹46,349 cr	What the whole company is worth on the stock market. Up about a fifth since the July report.
Share price (52-week range)	₹9,010 (₹5,437 to ₹9,035)	Trading right at its one-year high.
Price-to-earnings (P/E)	~72	Buyers pay about ₹72 for each ₹1 of yearly profit. Expensive; the market expects growth to keep coming.
Q1 FY27 revenue (consolidated)	₹1,045 cr	Sales for Apr-Jun 2026, up 44% on a year ago and the first quarter above ₹1,000 cr.
Q1 FY27 operating margin	34.2%	About ₹34 of operating profit on every ₹100 of sales, up from about 28.5% a year ago.
Q1 FY27 net profit	₹243 cr	Profit after tax, a little more than double the ₹117 cr of a year ago.
Debt	Net debt free	Cash now exceeds borrowings, even with a big building programme under way.

Screener's tables show standalone figures (Q1 FY27 sales ₹695 cr). Management reports consolidated numbers, which include the Dahej subsidiary that holds the newer plants. This report uses consolidated figures from the call.

2. Concall coverage

Quarter	Call date	Transcript read?
Q4 FY22 to Q3 FY26 (15 calls)	May 2022 to Feb 2026	Carried forward from the Q4-2026 report
Q4 FY26 (prior boundary)	Apr/May 2026	Web-filled in the Q4-2026 report
Q1 FY27 ★	**5 Aug 2026**	**Newly deep-read in full**

Only the Q1 FY27 call was read in full this time. Screener's link for it was broken, so the full transcript was taken from the company's BSE filing of 11 Aug 2026. The four-year backstory comes from the prior report.

★ Latest concall highlights - Q1 FY27 (call held 5 Aug 2026)

- **Another record quarter.** Revenue ₹1,045 cr (+44%), operating profit ₹357 cr (+73%), profit ₹243 cr (+108%). All three arms grew: refrigerants and fluorides +33%, specialty chemicals +48%, CDMO +82%. Plain read: the new plants are full and earning.
- **A new business is being built.** The board approved ₹90 cr for "adoption" plants for advanced materials, aimed at chip-making, chip cooling, displays, data centres and defence. Five products are already approved at lab scale. Phase one finishes around Feb-Mar 2027. Navin also signed a development deal with DRDO (India's defence research body) to make an imported specialty chemical locally.
- **More pharma capacity.** ₹125 cr for Phase 2 of its newest pharma plant (cGMP4), due by Jan-Mar 2027, backed by rising demand from its main European drug customer. CDMO sales of US$100m this year are "very much on track".
- **Margin guide steady.** CFO expects margins around 32-33% (give or take one point) over the next year or two, helped by new capacity, despite higher raw-material costs from global tensions.
- **One small slip.** The Chemours data-centre cooling-fluid plant, due June/July 2026 in the last report, is now targeted for end of Sep 2026.

Business mix & capacity

Domestic vs export: not broken out by management. The refrigerant contract with Honeywell, the Chemours plant and most CDMO customers are overseas, so the business leans heavily on exports, but no exact split was given.

Capacity utilisation: no percentage given. Existing plants were running at or near full by late FY26, which is why new lines matter. Coming on stream: a 15,000-tonne R32 refrigerant line (Oct-Dec 2026), Dahej multi-purpose plant debottlenecking (Oct-Dec 2026), Chemours (Sep 2026), cGMP4 Phase 2 (Jan-Mar 2027). The 60,000-tonne hydrofluoric-acid plant should cover needs for four to five years. Plain read: plenty of new capacity lands within FY27.

★ Since our last report

Builds on the Q4-2026 report (boundary call Apr/May 2026). Prior verdicts: **trigger YES**, **consistency YES**.

Prior read	What we said then	What the new call shows	Movement
Earning trigger	Plant-building programme visibly paying off	Revenue +44%, profit doubled, all three arms growing	Confirmed
Consistency	Largely delivered, CDMO target late	Projects still on dates; margin guide held; CDMO target reaffirmed	Confirmed
15,000-tonne R32 line (Q3 FY27)	Funded, on track	Still on track for Oct-Dec 2026	On-track
Chemours cooling-fluid plant (Q1 FY27)	Due June/July 2026	Now end of Q2 FY27 (Sep 2026)	Slipping (one quarter)
CDMO US$100m	"Aspirational by FY27"	"Very much on track" for FY27; CDMO +82%	Improving
~30% margin	Sustain around 30%	34.2% this quarter; guide 32-33%	Improving

Verdict change this quarter: both verdicts unchanged at YES. The only miss is a one-quarter delay on the Chemours plant, which is small next to everything else landing on schedule.

★ 3. Earning-trigger thesis

The engine is the same as last time: a string of new fluorine plants, mostly backed by long contracts with global companies, coming online one after another. The plants built in FY23-FY26 are full and drove this quarter's jump. The next set (R32 line, debottlenecking, Chemours, cGMP4 Phase 2) lands inside FY27, and management says growth to FY28 is "largely baked in". The new piece is advanced materials, which management wants to grow to the size of today's CDMO arm by 2030. That's a long way off and not in the numbers yet. Refrigerant prices are strong now, but India will have too much R32 capacity for some years, so Navin is locking in multi-year contracts and leaning on low costs.

Trigger	What management said	Evidence so far	Time horizon	Strength	Change since last report
Refrigerants / R32 expansion	New line more than doubles R32 capacity; contracts signed for part of output	HPP +33%; a couple of five-year contracts signed, more close	Q3 FY27 onward	Strong	↑ contracts reduce price risk
Specialty chemicals (agro molecules)	Campaign orders for 4-5 new molecules this year	+48%; pricing pressure in Latin America persists	FY27-FY28	Strong	unchanged
CDMO (pharma contract work)	US$100m in FY27; Phase 2 cGMP4; 3-4 drug approvals due in 8-12 months	+82%; deeper role in main customer's supply chain	FY27-FY29	Strong	↑ improving
Chemours data-centre cooling fluid	Only supplier; plant due end Sep 2026	Chemours already selling product made by Navin; scale-up timing unclear	FY27-FY28	Moderate	↓ slight delay
Advanced materials (chips, displays, defence)	Build to CDMO-scale by end of decade; ₹90 cr first step	Five lab-approved products; DRDO tie-up	FY28+	Unproven	new

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
FY22-FY23	Commission Honeywell refrigerant, MPP and agro plants	All on schedule; record FY23	Delivered
FY24	Hold margins near 24-25%	Agro destocking; margin fell to ~17%; MD left	Missed (cyclical)
FY25	Recovery in second half under new MD	Margin back to 25.5% by Q4; R32 line commercialised	Delivered
FY26	Ramp cGMP4, AHF, R32; higher margins	Sales +41%, profit +130%, margin 32.6%	Delivered
CDMO US$100m	By ~FY26, then "aspirational FY27"	"Very much on track" in FY27	Partly (late, now close)
Chemours plant	Q1 FY27	Moved to end Q2 FY27	Partly (one-quarter slip)
Q1 FY27 vs ~30% margin guide	~30%	34.2%	Delivered

Narrative drift: very little. The same plant names come up call after call and move from "approved" to "on track" to "running". Even an analyst on this call said what stood out was how things discussed over several quarters are now showing up in the numbers. The newer advanced-materials story is an add-on, not a replacement, and management is funding it in small steps with lab-approved products first. The CFO was open about raw-material cost pressure and agro pricing in Latin America instead of glossing over them.

5. Bottom line - two verdicts

Durable earning trigger? → YES

vs last quarter: unchanged

The quarter added more proof. Every arm grew, profit doubled, and a fresh batch of plants starts within FY27, with management saying growth to FY28 is already locked in by capacity under construction. Risks are R32 oversupply in India and agro pricing, both partly covered by contracts and cost position. The bigger risk for a shareholder is price: at about 72 times earnings, the stock needs this to keep going.

Management consistent? → YES

vs last quarter: unchanged

Plants keep arriving on or near schedule, margins came in above guide, and the long-delayed CDMO target now looks within reach. The Chemours slip of one quarter is the only blemish this time and was disclosed plainly. A steady, believable team.
