KSH International Ltd

Concall Tracker: reading the earnings calls to judge the earning trigger and management consistency

Report date: 6 Nov 2026 | Quarter: Q1 FY27 (Apr-Jun 2026) | Screener: KSHINTL | BSE 544664 / NSE KSHINTL | Builds on the Q4-2026 report

1. Snapshot

What it does: KSH makes magnet winding wire, the insulated copper wire wound into the coils of electrical machines. Its main product is CTC (continuously transposed conductor), a precision wire that goes into big power transformers on the electricity grid. It sells to about 120 transformer and machine makers in India and abroad, and it's India's largest exporter of winding wire. Copper cost is passed straight to customers, so KSH really earns on the "value addition" per tonne.

Number	Value	Plain read
Market value	₹6,805 cr	What the stock market values the whole company at today. Up from about ₹5,743 cr at our last report.
Sales, Q1 FY27	₹1,164 cr	Sales for Apr-Jun 2026, roughly double the same quarter last year. A good chunk is pricier copper being passed through, so don't read it all as real growth.
Volume, Q1 FY27	~8,000 t	Tonnes of wire actually shipped, up about 30% on a year ago. This is the "real" growth number.
Operating profit (EBITDA), Q1	₹74.4 cr	Profit from the core business before interest, tax and depreciation, up from ₹40 cr a year ago and ₹56 cr last quarter.
Profit per tonne (EBITDA/t)	~₹93,000	Operating profit on each tonne sold. A record, up from ~₹74,000 in Q4 and ~₹66,000 a year ago. Management says don't bank on this level (see below).
Net profit, Q1	₹42.2 cr	A quarterly record, up 86% on a year ago and 22% on Q4.
ROCE / ROE	21.5% / 20.1%	It earns about ₹21 a year on every ₹100 of capital. Healthy.
P/E	45.6	The share price is about 46 times a year's profit. Still expensive, though cheaper than the ~52 at our last report because profit grew faster than the price.

2. Concall coverage

Quarter	Call date	How it was read
Q2 FY26 to Q3 FY26 (2 calls)	Jan-Feb 2026	Carried forward from the Q4-2026 report
Q4 FY26 (prior boundary)	26 May 2026	Read in the Q4-2026 report
Q1 FY27	**11 Aug 2026**	**Newly deep-read in full ★**

Only the Q1 FY27 call was read in full this time. The backstory comes from the prior report. KSH listed in Dec 2025, so this is just its fourth call; the record is still short (about seven months).

★ Latest concall highlights: Q1 FY27 (call held 11 Aug 2026)

- **Record quarter.** Profit ₹42.2 cr, up 86% on last year. Volume up 30% to ~8,000 tonnes, so the growth is real tonnes, not just copper prices.
- **Profit per tonne jumped to ~₹93,000.** Driven by a record share of CTC, more exports, new customers paying market-linked rates, and a weak rupee. Management still only guides ~₹75,000 a tonne for FY27, because standard wire (lower margin) will grow as Phase 2 comes in and Supa adds fixed costs.
- **Big new customer deal.** A five-year supply framework with Hitachi Energy for its Indian and some global plants. Quantities and prices aren't fixed yet, so it's visibility, not booked revenue.
- **Promises kept.** The upcast copper-recycling plant (5,000 t, to reuse its own scrap) was commissioned on time. Working-capital days fell to 60 from 65 in Q4 and 71 a year ago.
- **Tone:** confident but careful. One soft spot flagged honestly: a few transformer makers who are busy expanding delayed picking up orders by a few weeks.

Business mix & capacity

India vs exports: exports were about 27% of revenue in Q1 (roughly a quarter overseas). Export revenue rose 76% on last year. Target is to get back to the old peak of ~40% over time. Middle East, Europe and US are each about 8-11% of revenue.

Capacity: 43,445 t a year installed, unchanged in Q1. Utilisation rose to ~73.5% from ~70% in Q4, so there's still room to grow on existing lines. Phase 2 at Supa takes it to ~59,000 t by March 2027 (14,400 t of the 30,000 t expansion done so far). The board also cleared looking at 10 more acres at Supa for later growth.

Since our last report (builds on Q4-2026 report, call of 26 May 2026)

Prior verdicts: earning trigger **YES**, management consistent **MAYBE** (only because the record was short).

Prior read	What we said then	What the new call shows	Movement
Trigger: YES	Capacity doubling into a power-grid boom, mix lifting profit per tonne	Volume +30%, profit per tonne at a record, Hitachi five-year framework signed	**Confirmed**
Consistency: MAYBE	Delivered everything, but only 3 calls	Delivered again: upcast plant on time, Phase 2 on track, profit per tonne above guidance	**Improving**
Phase 2 to 59k t in FY27	"On track"	14,400 t done, rest by March 2027, next wave in Q2	**On-track**
Cut working capital	Stuck at 65-68 days	60 days; target 30-35 days over "multiple quarters"	**Improving**
Exports back towards 40%	~27-30% in FY26	Still ~27% of revenue, though growing fast	**On-track (slow)**
HVDC / EV (PEEK wire) optionality	Small today, FY28+	Higher-kV CTC holds above 25% of CTC volume; PEEK line still being installed	**Too early**

Verdict change: trigger unchanged at YES. Consistency stays MAYBE but leans firmly towards YES; one more clean quarter isn't enough history to flip it.

3. Earning Trigger thesis ★

The driver is simple: transformer makers worldwide are sitting on three to five years of orders and expanding, and every transformer needs winding wire. KSH is doubling capacity into that demand and is shifting towards its richest products (CTC, 765 kV, HVDC and exports). That's already showing: tonnes up 30%, profit per tonne at a record, and a big global name (Hitachi Energy) wanting to lock in supply for five years. The risk to the story isn't demand. It's that the mix normalises as cheaper standard wire fills Phase 2, and that rivals add capacity too.

Trigger	What management said	Evidence so far	Horizon	Strength	Change since last report
Capacity doubling (29k to 59k t)	Phase 2 done by March 2027	14,400 t added; utilisation up to 73.5% on a bigger base	Now to FY27	**Strong**	Unchanged, on track
Power-grid / data-centre demand	OEMs have 3-5 year order books, all expanding	Specialised wire revenue +113%; exports +76%	Multi-year	**Strong**	↑ Hitachi framework adds visibility
Mix lifting profit per tonne	~₹75,000/t "comfortable" for FY27	₹93,000 in Q1; trailing 12 months ~₹74,000	Ongoing	**Strong**	↑ beat guidance, but Q1 is a peak
Long-term supply deals	More OEMs discussing multi-year locks	Hitachi framework signed, no quantity or price yet	FY27-31	**Moderate**	↑ new this quarter
EV (PEEK) & compressor wire	Meaningful volume around FY28-29	PEEK line still being installed; standard wire +83%	FY28+	**Unproven**	Unchanged

4. Management Consistency scorecard

Period	What was promised	What actually happened	Verdict
Jan-May 2026	Profit per tonne ₹65,000-70,000 "sustainable"	₹67,600 in FY26, ₹74,000 in Q4, ₹93,000 in Q1 FY27	**Delivered (beat)**
May 2026	FY27 volume growth "at least" 21%	Q1 volume +30%; trailing 12 months +26%	**On track (beat)**
Jan 2026	Repay ~₹226 cr debt from IPO money	Done in FY26	**Delivered**
IPO objectives	Upcast recycling plant	Commissioned on time in Aug 2026	**Delivered**
All calls	Phase 2 to 59k t in FY27	14,400 t of 30,000 t in; rest due by March 2027	**Too early / on track**
All calls	Cut working-capital days	71 → 65 → 60 days	**Partly, improving**
Multi-year	Exports back to ~40%	Still ~27% of revenue	**Too early**

Narrative drift: none. Four calls in, the story is the same: grid boom, capacity doubling, richer mix. If anything they under-promise. They kept FY27 profit-per-tonne guidance at ₹75,000 right after printing ₹93,000, and pushed back when analysts tried to extrapolate. The one thing to watch is interest cost, which rose to ₹17 cr in Q1 as working-capital borrowing grows with sales.

5. Bottom line: two verdicts

Durable earning trigger? → YES (vs last quarter: unchanged)

Nothing weakened it and a few things firmed it up. Volume grew 30%, profit per tonne hit a record, and a global transformer major signed a five-year supply framework. Capacity is still coming on through FY27, so growth has room to run. The catches: Q1's profit per tonne flattered by an unusually rich mix that management itself expects to fade, a few customers slow to pick up orders, and a stock that's priced for a lot of this already.

Management consistent? → MAYBE (leaning YES) (vs last quarter: unchanged)

Another quarter of doing what they said: upcast plant on time, Phase 2 on schedule, working capital down again, guidance beaten without being raised recklessly. The only reason it isn't a YES yet is time. Four calls over about seven months is a good start, not a track record. If Phase 2 lands by March 2027 and the mix holds near ₹75,000 a tonne, this flips to YES.
