Shree Pushkar Chemicals & Fertilisers Ltd

Concall tracker, Q2 2027 report (results for the quarter ended 30 Sep 2026) · NSE: SHREEPUSHK

1. Snapshot

A Ratnagiri (Maharashtra) chemicals company with two halves. The chemical side makes dye intermediates (like H-Acid and vinyl sulphone) and finished textile dyes, sold to dye and textile makers in India and abroad. The fertiliser side makes single super phosphate and mixed fertilisers in Maharashtra and, through its Madhya Bharat Phosphates subsidiary, in Madhya Pradesh, sold to farmers with government subsidy support. It's built as one integrated complex: acid from one plant feeds the next, and by-products go into fertiliser.

Number	Value	Plain read
Market cap	₹1,877 cr	What the market values the whole company at; a small company.
FY26 sales (consolidated)	₹977 cr	Up about a fifth on the year, just short of the ₹1,000 cr management had guided.
FY26 profit	₹70 cr	About ₹7 of profit on every ₹100 of sales; guidance was 8%.
Q2 FY27 sales	₹404 cr	Up 58% on the year and 44% on the quarter before: its best quarter ever.
Q2 FY27 profit	₹36 cr	Nearly double last year's quarter; operating margin 12%, up from 10%.
P/E	~32x	On the standalone numbers Screener shows; investors are paying up for the recent jump.
Cash	~₹142 cr unused limits/cash	The capex so far has been paid from its own profits; the company says it's cash-surplus.

2. Concall coverage

Quarter	Call date	Transcript read?
Q3 FY24 → Q3 FY26 (9 calls)	Feb 2024 → Feb 2026	Skimmed for guidance, plant timelines
Q4 FY26	19 May 2026	Read for full-year results and delays
Q1 FY27	14 Aug 2026	Deep-read
Q2 FY27 ★	3 Nov 2026	Deep-read in full

Screener holds 48 transcripts going back to 2016; the last 12 (three years) were used. First report on this company.

Latest concall highlights: Q2 FY27 (3 Nov 2026)

- **Record quarter.** Sales ₹404 cr (+58%), profit ₹36 cr (+96%). Chemicals jumped 85% to ₹245 cr; fertiliser rose 27% to ₹158 cr. Total tonnage grew only 4%, so most of the jump is price.
- **Why prices are up:** Chinese dye-intermediate plants are shut on pollution and safety rules, and H-Acid prices spiked. The MD said plainly these prices are "practically non-sustainable" and will go back.
- **New plants:** Unit 5 (about 6,000 tonnes a year of dyes) started commercial production. Unit 6 (a big NPK fertiliser plant) starts trial runs around end-November, about a year late; no revenue counted from it this year. 10 MW of solar at Nanded is live.
- **New capex and promoter money:** ₹70 cr for a new 3,000-tonne chemical plant at Unit 5 by March 2028 (product not disclosed), partly funded by ₹45 cr of warrants issued to the MD himself.
- **Guidance:** FY27 sales ₹1,250-1,300 cr with three-digit profit, without Unit 6. FY28 "around ₹2,000 cr" which the MD then told investors to read as ₹1,800 cr. Q3 fertiliser may be soft after weak rains.

Business mix & capacity
Segment split Q2 FY27: chemicals ~61% / fertiliser ~39% of sales. The domestic/export split wasn't broken out on the recent calls (it's a recognised export house, and dye intermediates go to overseas buyers too). Capacity use: the MD said utilisation "decreased a bit" in Q1 on the weak global market, and the acid plant is still running low because sulphur got costly. No utilisation number given. Unit 6 (NPK, about 1.5 lakh tonnes a year) and the Madhya Bharat expansion (3 lakh tonnes, ~₹350 cr, by FY28) are the big adds.

3. Earning Trigger thesis

Two things are being mixed together here, and the honest read keeps them apart. The short-term boost is China: dye intermediate supply there is cut, so prices and margins jumped, and management itself won't bet on it lasting. The longer story is capacity: Unit 5 in dyes, Unit 6 in NPK fertiliser, the big Madhya Bharat fertiliser expansion and now another chemical plant. Management says these can take sales two and a half to three times from today. That part is real money going into real plants, paid mostly from internal cash, but every plant date so far has slipped.

Trigger	What management said	Evidence so far	Time horizon	Strength
China supply gap in dye intermediates	Helped margins; "short-lived", will go back	Chemical sales +85% on only modest volume growth	Weeks to months	Weak as a durable driver: one-off by management's own words
Unit 5 and Unit 6 at Ratnagiri	Unit 5 live; Unit 6 trials end-Nov, full output next year	Unit 5 producing; Unit 6 about a year behind the first date	FY28	Moderate: built, but late
Madhya Bharat fertiliser expansion	3 lakh tonnes, ~₹350 cr, by FY28	₹92 cr spent so far from own cash	FY28	Unproven
New 3,000-tonne chemical plant	~₹250 cr of sales at 75% use, by Mar 2028	Just approved; product kept secret	FY28-29	Unproven

3b. Trigger check

Trigger type	Yes/ No	What was said (date)
Debt cut	No	Little debt to cut; says it's cash-surplus (Nov 2026).
New business	No	New plants are in its existing dye and fertiliser lines; the new chemical's product wasn't disclosed.
Margin up	Yes	"Margins have improved mainly because of the China factor" (Nov 2026), though called short-lived.
New management	No	Same MD and CFO.
New capacity	Yes	"Commercial production at Unit 5... commenced during this quarter... approximately 6,000 metric tons"; Unit 6 trials end-November (Nov 2026).
Big orders	No	Product business, no order book.
Turnaround	No	Profitable throughout.
Promoter buying	Yes	Board approved warrants to the MD "aggregating up to INR45 crores" (Nov 2026); balance of the 2025 warrant money due by March 2027.

Single concrete driver: new dye and NPK fertiliser plants at Ratnagiri and a bigger Madhya Pradesh fertiliser plant, funded from own cash and promoter warrants, with a temporary lift today from China's dye-intermediate shortage.

3c. Margin bridge

Operating margin 12% against 10% a year ago. It rose because Chinese supply of dye intermediates dried up, lifting prices, and the busy Kharif season gave fertiliser volume to spread costs over. Gross margin actually slipped a little (30% vs 33%), which the CFO put down to inventory changes. The MD says the price spike won't last. (one-off)

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
May 2025	Unit 6 trial production around Diwali 2025	Delayed by rain, then power supply, then Hormuz raw-material shortage; trials now end-Nov 2026	Missed
Nov 2025	FY26: ₹1,000 cr sales, ~8% net margin	₹977 cr and 7.1%	Partly
May-Aug 2026	FY27: ~₹1,250 cr sales, ~9% net margin, counting Unit 6	H1 ₹684 cr at 8.6%; target now held without Unit 6	On track
Nov 2026	FY28 ~₹2,000 cr (then "hold 1,800")	Too early	Too-early

Narrative drift: the story has stayed the same for three years: an integrated dye and fertiliser complex adding plants. The numbers guided were roughly met. What drifts is the plant timing, with Unit 6 a year late and the reasons changing each call. The MD's style is unusual: he's openly cautious about the China windfall, which is a good sign, but he also throws out big targets (two and a half to three times sales, ₹2,000 cr) and walks them back in the same call, and refused to name the new product.

5. Bottom line: two verdicts

Durable earning trigger? → **MAYBE**

The record quarter is mostly a China price spike that management itself calls temporary. The lasting driver is new capacity, and that's real (Unit 5 is producing, Unit 6 is built, the promoter is putting his own money in) but it won't show in the numbers until FY28. When the dye price spike fades, the next few quarters could look worse even if the plan is fine.

Management consistent? → **MAYBE**

Revenue guidance is usually close, and the MD is candid about what's one-off. But Unit 6 has slipped about a year with a new reason each time, and the habit of floating big numbers then telling investors to discount them makes guidance harder to trust.

6. Checkpoints for next quarter

- Unit 6 NPK plant starts trial production by December
- Full-year sales target is held as China dye prices cool
- Shareholders approve the promoter warrants and money comes in
