

Atlanta Electricals Ltd — Concall Tracker

Q1 FY27 continuity update • builds on the Q4-2026 report (boundary call 11 May 2026) • Prepared 24 July 2026 • Screener ticker: ATLANTAELE • *Not investment advice*

1. Snapshot

What the business does: Atlanta Electricals makes **transformers** — the large steel-and-copper units that step electricity up or down in voltage so power can travel across the grid and reach homes and factories. Over three decades old, it sells mostly to state power utilities (roughly two-thirds of orders) plus private builders and industry, and is based in Gujarat. It listed on the market only in 2025, so this remains a very young public company.

Number (latest)	Value	Plain-English read
Market value of the company	Rs 12,239 crore	What the whole company is worth on the market today — down from ~Rs 13,037 cr at the last report as the stock cooled off.
Q1 FY27 revenue (Apr–Jun 2026)	Rs 466 crore	Sales for the first quarter of the new year — up about 48% on Q1 FY26's Rs 315 crore. Growth stayed strong.
Q1 FY27 profit after tax	Rs 46.8 crore	What was left after all costs and tax (consolidated) — up about 50%. Profit again grew faster than sales. (Screener shows ~Rs 53 cr on a standalone basis.)
Q1 FY27 operating margin	16.5%	Out of every Rs 100 of sales, Rs 16.5 is operating profit — up 1.05 points year-on-year, but below Q4 FY26's ~20% (Q1 is seasonally the weakest quarter).
Trailing-12-month sales	Rs 2,003 crore	Sales over the last four quarters — the business has now crossed the Rs 2,000-crore run-rate.
Order book (unexecuted)	Rs 3,117 crore	Work won but not yet delivered — up 25% in just one quarter (from Rs 2,493 cr) and nearly double a year ago. More than 1.5 years of sales in hand.
Share valuation (P/E)	~51 times	The stock costs about 51 years of current profit — still expensive, though cheaper than the ~60x at the last report.
Return on capital (ROCE / ROE)	47% / 34%	The money invested earns very high returns — a mark of a quality operation.

2. Concall coverage

The company listed only in 2025, so the transcript history is still short. This is a **continuity update**: the four FY26 calls were already deep-read in the Q4-2026 report and are carried forward here as backstory. Only the **new Q1 FY27 call** is fresh this quarter.

Period	Call date	Read?
Q1 FY26 → Q3 FY26 (3 calls)	17 Oct 2025 · 12 Nov 2025 · 20 Jan 2026	Carried forward from Q4-2026 report
Q4 FY26 (prior boundary call)	11 May 2026	Carried forward from Q4-2026 report
Q1 FY27 (Apr–Jun 2026) — latest ★	22 July 2026	Newly analysed this quarter

Transparency note: The Q1 FY27 earnings call was held on 22 July 2026, only two days before this report. The full transcript is **not yet published on Screener**. This quarter's new-call analysis is therefore built from the company's official Q1 FY27 results release and management commentary reported from the call (order book, product-mix and capacity statements, and the Chairman's quotes). It will be reconciled against the full transcript when it appears.

★ Latest concall highlights — Q1 FY27 (22 July 2026)

- **Growth held up.** Q1 revenue Rs 466 crore, up ~48% on Q1 FY26 (Rs 315 cr) — the fast-growth run continued into the new year, driven by higher plant utilisation and healthy order execution.
- **Profit outran sales again.** EBITDA (operating profit) Rs 77.1 crore, up ~58%; consolidated net profit Rs 46.8 crore, up ~50%. Margin 16.5%, up 1.05 points year-on-year — though seasonally below the ~20% peak of Q4 FY26.
- **Order book jumped to a record Rs 3,117 crore** — up 25% in a single quarter and nearly double a year ago. Fresh orders of Rs 972 crore were booked in the quarter, including a Rs 291.7-crore order from Rajasthan's transmission utility (RRVPNL). This is more than a year and a half of sales already in hand.
- **The high-voltage shift is now visible in the book.** Over 55% of the order book is 220 kV-and-above transformers, and **400 kV transformers and reactors already account for ~Rs 275 crore of orders** — the first hard sign that the extra-high-voltage prize is converting from approval into real business.
- **Tone:** confident and steady. Chairman Niral Patel: "We have commenced FY27 on a strong note, building on momentum established over the past year," citing "strong revenue visibility" from the order book and demand from transmission, renewables, battery storage (BESS), industrial electrification and data centres.

Business mix & capacity (quick facts)

Domestic vs export: still almost entirely **domestic** — Q1 orders (e.g. the Rajasthan utility win) are all Indian transmission & distribution. Exports remain small; management's prior goal of taking exports to a maximum ~15% of sales over three years was not updated this quarter, so ~85% + stays domestic for now.

Capacity utilisation: management again pointed to "higher capacity utilisation" as a driver of Q1 growth but did **not disclose a fresh utilisation percentage** in the results release. The prior guide stands as backstory — the flagship Vadod plant ran at only ~39% in FY26 and is guided toward ~65% in FY27 and ~100% in FY28, so filling that plant remains the main engine of future growth. Additional projects flagged as on track: commissioning the inverter-duty transformer facility (for solar) and tank-and-radiator backward integration.

★ Since our last report

This builds on the **Q4-2026 report** (boundary call 11 May 2026), which carried two verdicts: **Durable trigger** → **YES** and **Management consistent** → **YES**. Here is how that read has aged one quarter on.

Prior read / promise to watch	What we said then	What the new call shows	Movement
Base trigger: new plants filling up	Real and firing (FY26 sales +49%)	Q1 sales +48% YoY; order book +25% QoQ to Rs 3,117 cr	Confirmed
400 kV extra-high-voltage push	Approval + first order won, but no 400 kV revenue yet	400 kV transformers & reactors now ~Rs 275 cr of the order book — converting to real orders	Improving
Vadod ramp to ~65% (FY27) / ~100% (FY28)	Main source of future growth; only ~39% in FY26	"Higher utilisation" cited as a Q1 growth driver; no fresh % disclosed	On-track
765 kV prototype (Atlanta Trafo)	Still to be built and tested	Development "remains on track"; still no prototype milestone	On-track
~40% annual growth marker	FY26 grew 49% — ahead of target	Q1 FY27 +48% — comfortably ahead again	Confirmed
Margin sustainability (~18–20%)	Beaten — rose to ~20% by Q4 FY26	Q1 margin 16.5% (up YoY but below Q4 peak — seasonal Q1 dip)	On-track (watch)

Verdict change this quarter: both verdicts **unchanged**. Nothing broke; the order book surged, the 400 kV story started turning into actual orders, and growth stayed near 50%. The only thing to watch is the sequential margin step-down, which is normal seasonality (Q1 is always the softest quarter) rather than a red flag.

3. Earning trigger thesis ★

The core story is unchanged and getting more concrete: Atlanta quadrupled its factory capacity (the big Vadod plant plus the acquired ex-JV plant, Atlanta Trafo) right as India entered a multi-year power-grid building boom — roughly Rs 9.6 lakh crore of transmission investment planned to 2032, plus renewables, battery storage and data centres all needing transformers. As the new plants fill up and the mix shifts to bigger, higher-voltage (400 / 765 kV) transformers — which carry better margins — sales and profit should keep climbing. Q1 FY27 added fresh proof: a record Rs 3,117-crore order book (+25% in one quarter) and the first ~Rs 275 crore of 400 kV orders now on the books.

Trigger	What management said	Evidence so far	Horizon	Strength	Change since last report
New capacity (Vadod + Atlanta Trafo) filling up	New plants drive growth; ~40%+ a year	Q1 sales +48%; order book +25% QoQ to Rs 3,117 cr — record revenue visibility	Now → FY28	Strong already delivering	↑ improving — order book at fresh record
Shift to higher-voltage 400 / 765 kV	Higher voltage = higher margin; PGCIL 400 kV approval secured	400 kV transformers & reactors now ~Rs 275 cr of orders; 220 kV+ is >55% of book; 765 kV development on track	FY27–FY28+	Moderate now converting to orders	↑ improving — first real 400 kV orders in the book
Grid / renewables / data-centre demand wave	Multi-year transformer shortage; demand outruns supply	Order book near-doubled YoY; margins up YoY; no price war visible	Multi-year	Strong but industry-wide (rivals also expanding)	unchanged — thesis intact

In short: the first engine (fill the new plants) keeps firing hard and the order book is now at a record. The second engine (extra-high-voltage 400/765 kV) has moved from "approval only" to ~Rs 275 crore of actual 400 kV orders — still early on delivered revenue, but the promised prize is starting to show up.

4. Management consistency scorecard

Still a short record — five calls now (FY26 four + Q1 FY27), so this is a growing but young promised-vs-delivered check.

Period	What was promised	What actually happened	Verdict
FY26 (all calls)	New plants lift sales; grow ~40%+; ~18–20% margins sustainable; repay debt	FY26 sales +49%, margin ~20% by Q4, term loans cleared	Delivered
Q1–Q3 FY26	Power Grid (PGCIL) 400 kV plant approval	Slipped twice, landed 2 Apr 2026	Partly (late but done)
Q4 FY26	Turn the 400 kV approval into orders/revenue	400 kV transformers & reactors now ~Rs 275 cr of the order book	Delivered (orders); revenue still to come
Q4 FY26	Keep growing ~40%+ into FY27	Q1 FY27 revenue +48%; PAT +50%	Delivered
Q4 FY26	Prove 400 kV / 765 kV prototypes; ramp Vadod	Development "on track"; no prototype milestone or fresh utilisation number yet	Too early / in progress

Narrative drift: still essentially none. One quarter into FY27 the story is the same one told through FY26 — same plants, same voltage-upgrade plan, same demand thesis — and it keeps being backed by real numbers (order book +25% QoQ, growth near 50%). Management continues to avoid precise forward guidance but keeps beating the loose ~40% marker. The one honest caveat carries over: the record is now five calls / about a year long and has not yet faced a downturn, and Q1's sequential margin dip (seasonal) is worth watching to confirm it is not the start of any pricing pressure.

5. Bottom line — two verdicts

Durable earning trigger? → YES (vs last quarter: unchanged)

Nothing weakened the thesis this quarter — if anything it strengthened. The base trigger (a near-four-fold capacity expansion landing into an Indian transformer super-cycle) is still delivering (Q1 sales +48%, PAT +50%), the order book hit a record Rs 3,117 crore (+25% in one quarter), and the second leg — extra-high-voltage 400 kV — moved from a bare approval to ~Rs 275 crore of actual orders. The big EHV prize still needs to convert into delivered revenue, but the driver is concrete, live and building. Clear Yes.

Management consistent? → YES (vs last quarter: unchanged)

Management again did what it said — kept growth near 50%, held margins above last year, and turned its 400 kV approval into real orders — with a steady, no-drift story. This stays a Yes, with the same honest asterisk carried from last time: the public record is only about a year / five calls long and untested by any downturn, and the seasonal Q1 margin dip is worth monitoring. Nothing this quarter moved the verdict.
