Astrazeneca Pharma India Ltd

Indian arm of AstraZeneca. Imports and sells the parent's patented cancer, heart, diabetes, lung and rare-disease medicines to Indian hospitals and specialists.

Concall-tracker report, filed under Q2-2027. Prepared 11 Nov 2026.

1. Snapshot

Number	Value	Plain read
Market cap	Rs 16,273 cr	What the market values the company at
Q2 FY27 revenue	Rs 729 cr	Up about 30% on a year ago
Q2 FY27 operating margin	13%	Recovered from 7% in Q1 FY27 but still swings a lot quarter to quarter
Q2 FY27 profit	Rs 62 cr	Up from Rs 54 cr a year ago
ROE	23%	High return on shareholders' money; no debt
P/E	about 87	Very pricey: 87 rupees per rupee of yearly profit

2. Concall coverage

No quarterly concall transcripts were available on Screener. The company holds no earnings calls; Screener lists only yearly AGM transcripts (2019-2025). This report is based on a global web deep-dive: the 2023-2025 AGM transcripts, the company's Q1 and Q2 FY27 results releases (via Equitybulls, DSIJ, Sahi) and the Screener numbers.

Quarter	Date	Transcript read?
AGM FY23	Aug 2023	Yes (skimmed)
AGM FY24	Aug 2024	Yes (skimmed)
AGM FY25	14 Aug 2025	Yes
Q1 FY27 results	Aug 2026	Press coverage
Q2 FY27 results	5 Nov 2026	Press release

Latest concall highlights: Latest update highlights: Q2 FY27 results (5 Nov 2026)

- Revenue up 30% to Rs 729 cr; pre-tax profit before one-offs up to Rs 103 cr from Rs 78 cr.
- Oncology Rs 509 cr (up from Rs 398 cr) is about 70% of sales, led by Enhertu (breast cancer) and Imfinzi (lung and other cancers).
- Biopharma (heart, kidney, diabetes, lungs) Rs 161 cr, up about 27%. Rare disease Rs 20 cr from Rs 4 cr, a new unit built on Soliris and Koselugo.
- Q1 FY27 profit had fallen about a third despite 30% sales growth; no reason was given in the release. Q2 margin recovered to 13%.

Business mix and capacity

- Almost all sales are in India; exports not material. Products are imported from the parent, so there is no factory capacity to fill.
- Not disclosed: plant utilisation (not applicable).

3. Earning trigger thesis

> The driver is the parent's pipeline: 14 new medicine and indication approvals in India since 2023, mostly cancer drugs, plus a new rare-disease unit. Sales have grown about 30% a year for several years. The catch is that profit doesn't keep pace: margins swing between 7% and 18% as launch spending and import costs move.

Trigger	What management said	Evidence so far	Time horizon	Strength
New cancer drug launches	Enhertu, Imfinzi, Imjudo, Calquence expanding into more indications	Oncology up about 28% in Q2	Ongoing	Strong for sales
Rare disease unit	Soliris and Koselugo launched	Rs 20 cr a quarter from almost nothing	FY27-FY28	Moderate
Profit catching up with sales	No guidance	Margin swung 7% to 13% in two quarters	Unclear	Weak

3b. Trigger check

Trigger type	Yes/No	What was said (date)
Debt cut	No	No debt
New business	Yes	Rare-disease unit launched with Soliris and Koselugo (AGM Aug 2025)
Margin up	No	Not stated; Q1 FY27 profit fell
New management	Yes	Praveen Rao Akkinepally became MD (AGM Aug 2025)
New capacity	No	-
Big orders	No	-
Turnaround	No	-
Promoter buying	No	-

Single concrete driver: A steady run of the parent's new cancer drugs and approvals in India keeps sales growing about 30% a year.

3d. Management changes

Praveen Rao Akkinepally took over as Country President and MD in 2025. He spent several years with AstraZeneca in the US and the previous two years leading its India oncology business. He has kept the focus on oncology, biopharma and rare disease.

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
AGM 2023-2025	Keep launching new medicines and indications	14 approvals since 2023	Delivered
AGM 2025	Grow via new launches	Sales up about 30% in Q1 and Q2 FY27	Delivered
AGM 2025	Build rare-disease business	Rs 35 cr in H1 FY27 from Rs 4 cr	Delivered
FY27	No profit guidance given	Profit fell in Q1, rose in Q2	Too-early

The story hasn't changed in three years: science-led launches in cancer and specialist care. The company gives no numeric guidance and holds no earnings calls, so there's little to hold it to. The weak point is that nobody explains the profit swings.

5. Bottom line

Durable earning trigger? YES

New cancer drug launches are a concrete, repeatable driver and already show in 30% sales growth. Profit is the uncertain part.

Management consistent? MAYBE

What it says each year it does, but it says little: no calls, no guidance, and no explanation for a sharp profit drop in Q1 FY27.

> **6. Checkpoints for next quarter**
>
> - Operating margin stays in double digits in Q3
> - Oncology keeps growing at least a fifth
> - Rare-disease sales keep rising each quarter
