Mangalam Worldwide Ltd

Concall tracker report · Q2 2027 (Sep 2026 quarter) · prepared 11 Nov 2026

1. Snapshot

A Gujarat stainless steel maker: it melts billets and ingots at Halol, rolls flat and round bars at Changodar, and makes further products at Kapadvanj, selling long and tubular stainless products in India and, since 2022, abroad. It moved from the NSE Emerge SME platform to the NSE main board on 18 Sep 2025.

- Market cap about Rs 1,113 cr: what the market values the whole company at.
- FY26 sales Rs 1,207 cr, up 14%, after 27-30% growth in the two years before.
- Operating margin rose from about 3% in FY23 to 7% in FY26 and 11% in the Sep 2026 quarter: it keeps more of each rupee of sales.
- Sep 2026 quarter: revenue Rs 361 cr, up 13%; EBITDA Rs 40 cr, up about 80%; profit Rs 13.8 cr, up 31%.
- Borrowings climbed to about Rs 385 cr (from Rs 85 cr in FY23): growth is being funded with debt.
- Promoters hold 66.5%, unchanged.

2. Concall coverage

Only one concall transcript exists on Screener (Q2 FY24, 19 Oct 2023), and Screener shows no transcript for later quarters. This report reads that call and adds a web deep-dive for the recent period: Q2 FY27 results coverage (themachinemaker, hdfcsky, sahi), an investor-presentation summary (arthneeti), Q1 FY27 results news (freepressjournal, multibagg) and the NSE migration filings.

Quarter / source	Date	Read?
Q2 FY24 concall	19 Oct 2023	Yes, in full
NSE main board migration filings	Sep 2025	Yes
Q1 FY27 results and solar plant news	Aug 2026	Yes
Q2 FY27 results and investor-presentation summary	Nov 2026	Yes
Screener financials to Sep 2026	Nov 2026	Yes

One call three years ago plus recent public material. There's no recent guidance to test, so the consistency read is limited.

Latest update highlights (Q2 FY27 results and presentation summary)

- Revenue Rs 361 cr, up 13.4%, put down to volume growth across long and tubular products.
- EBITDA margin 11.1%, up about 4 points on a year ago, attributed in the presentation summary to a richer value-added product mix.
- Exports Rs 39.9 cr vs Rs 22.0 cr a year ago, reported as an all-time high.
- Commissioned a 10.4 MW ground-mounted solar plant (July 2026), taking captive solar to 11.6 MW, to cut power costs.
- Plans named: more value-added stainless products, a proposed subsidiary in Belgium for the international business, operating efficiency. No numeric guidance.

Business mix & capacity

- Domestic vs export: exports were about Rs 40 cr of Rs 361 cr revenue in Q2 FY27, roughly a ninth of sales; the rest is domestic.
- Capacity: the Oct 2023 call gave Halol 66,000 tonnes (billets/ingots, about 80% used), Changodar 90,000 tonnes (rolling) and Kapadvanj 28,800 tonnes; recent reports put the total at about 1.8-1.9 lakh tonnes. Current utilisation not disclosed.

3. Earning trigger thesis

The earnings story is a shift toward value-added stainless products and exports, which management said in 2023 earn higher margins. It's showing: margins have tripled since FY23 and exports nearly doubled on a year ago. The catch is debt, which has more than quadrupled, and the fact that there are no recent calls, so the reasons come only from the presentation.

Trigger	What management said	Evidence so far	Time horizon	Strength
Exports	Oct 2023: 'aggressively expanding' exports, which carry 'higher profit margins'	Exports Rs 39.9 cr vs Rs 22.0 cr a year ago; proposed Belgium subsidiary	Ongoing	Moderate
Value-added mix	Oct 2023: move to higher-margin products; Q2 FY27 presentation: richer value-added mix	Operating margin from about 3% (FY23) to 11% (Sep 2026 qtr)	Ongoing	Moderate
Captive solar	10.4 MW solar plant commissioned July 2026	Should lower power costs	FY27 onward	Weak: small

3b. Trigger check

Trigger type	Yes/ No	What was said (date)
Debt cut	No	Borrowings rising
New business	Yes	Exports at an all-time high in Q2 FY27; proposed Belgium subsidiary to build the international footprint (Q2 FY27 presentation summary)
Margin up	Yes	Profitability 'supported by a richer value-added product mix' (Q2 FY27 presentation summary)
New management	No	Not stated
New capacity	No	Only a captive solar power plant, not steel capacity
Big orders	No	Not stated
Turnaround	No	Not applicable
Promoter buying	No	Promoter stake flat at 66.5%

Single concrete driver: A richer mix of value-added stainless products and fast-growing exports, lifting margins.

3c. Margin bridge

EBITDA margin was 11.1% in the Sep 2026 quarter against about 7% a year ago. The presentation summary credits a richer value-added product mix, and the new solar plant should trim power costs. It has risen steadily for three years rather than in one jump (lasting).

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
Oct 2023 call	Expand exports, which carry higher margins	Exports at an all-time high, up about 82% on a year ago	Delivered
Oct 2023 call	Improve EBITDA margin through efficiency, exports and higher-margin products	Operating margin about 5% (FY24) to 11% (Sep 2026 qtr)	Delivered
2025	Migrate from SME platform to main board	Moved to NSE main board 18 Sep 2025	Delivered
FY27	Belgium subsidiary, more value-added products	Proposed only	Too early

The one call in 2023 laid out exports and higher-margin products, and that's what the numbers since then show. The record is thin, though: no calls since, no guidance, and debt has climbed fast.

5. Bottom line

Durable earning trigger? → MAYBE

Exports and the value-added mix are a real, named driver and margins have climbed for three years. But the evidence comes from results and a presentation summary, not calls, and rising debt could eat into the gains.

Management consistent? → YES

What was said in 2023 (exports, better margins) has happened, and the move to the main board was done. With only one call, it's a thin record, but no promise has been broken.

6. Checkpoints for next quarter

- December quarter margin stays near the September quarter level
- Exports keep growing on a year ago
- Borrowings stop rising faster than sales
