1. Snapshot

What it does: Monolithisch makes ramming mass, a heat-proof silica powder packed into the inside wall of the induction furnaces that India's smaller steel makers use to melt scrap and sponge iron. The lining burns away and has to be re-packed every few days, so it's a repeat purchase that tracks how much steel the customer melts. It runs from Purulia in West Bengal, sells mostly to integrated secondary-steel plants in eastern India, and listed on NSE Emerge in 2025.

Measure	Value	What it means
Market cap	₹2,904 cr	What the whole company is worth on the market. It was ₹1,930 cr at our last report, so the shares are up about half in three months.
Share price / P/E	₹1,336 / 116×	Buyers pay ₹116 for every ₹1 of last year's profit. That's very expensive and already prices in the mine and the new plants working.
Q2 FY27 revenue (consolidated)	₹53.6 cr	Sales for Jul-Sep 2026, up 88% on a year ago and about 14% on the June quarter. Another record, but a touch under the ₹55-60 cr management guided.
Q2 FY27 EBITDA margin	29.5%	EBITDA = operating profit before interest, tax and depreciation. ₹29.5 kept per ₹100 of sales, up from 19% a year ago and above the 22-25% management keeps guiding.
Q2 FY27 net profit	₹11.2 cr	Profit after all costs and tax, up 145% on a year ago. H1 profit is ₹21.2 cr on ₹100.8 cr of sales.
Standalone vs consolidated	₹38.5 cr vs ₹53.6 cr	Screener's quarterly table shows the parent alone (up 35%). The gap is the Mineral India subsidiary bought in Nov 2025, so the 88% headline is partly an acquisition effect.
Return on capital (ROCE)	30.5%	Earns ₹30.5 a year for every ₹100 of capital. Very high for a powder business.

2. Concall coverage (split view)

Quarter	Call date	Read for this report?
H1 FY26 → Q4 FY26 (3 calls)	Oct 2025 to May 2026	Carried forward from the Q4-2026 and Q1-2027 reports
Q1 FY27 (prior boundary)	27 Jul 2026	Read in the Q1-2027 report
Special investor call (mine + new plants)	30 Sep 2026	Newly deep-read in full ★
Q2 / H1 FY27 earnings call	29 Oct 2026	Newly deep-read in full ★

Two new calls since the last report, both read in full. The older calls come in as backstory from the earlier reports. The whole history is still short: six calls over about a year, because the company only listed in 2025.

★ Latest concall highlights: Q2 FY27 (calls held 30 Sep and 29 Oct 2026)

- **Another record quarter, slightly short of the guide.** Revenue ₹53.6 cr, EBITDA ₹15.8 cr, profit ₹11.2 cr. Volumes about 55,000 tonnes at roughly ₹8,700-9,000 a tonne. Management had guided ₹55-60 cr, so this is the second quarter in a row a little under its own number, though margins beat again.
- **The big news: it won a quartzite mine.** A government-auctioned block at Nawada, Bihar, with about 7 lakh tonnes a year of permitted output. Commercial mining is targeted for mid-January 2027. Management says it cuts stone cost from ₹2,700-3,200 a tonne to ₹1,400-1,500, of which it plans to pass ₹300-400 to customers. Plain read: if it works, every tonne gets about ₹1,000 cheaper to make.
- **Two more plants announced.** Hospet, Karnataka (1.25 lakh t, ₹20 cr, July 2027) and Udaipur, Rajasthan (1.75 lakh t, ₹25 cr, Nov 2027), funded from internal cash. Total capacity would go from 5.76 to about 8.75 lakh tonnes.
- **The greenfield plant is live.** "Metallurgica" started commercial production on 10 Oct 2026, roughly ten days after the late-Sep target given in July. Group utilisation was 68-69% before it started.
- **FY28 target is back, and bigger.** ₹500-550 cr of revenue for FY28, with the FY27 target (about ₹250 cr) called "intact". Tone: very confident, at times promotional ("the new gold"), and the margin talk moved between the two calls.

Business mix & capacity (Q2 FY27). Domestic about 95%, exports tiny and still routed through Indian traders into Nepal and Bangladesh on cash terms. Direct exports to the Middle East and Africa only make sense once the western and southern plants run. Plain read: still an eastern-India steel story. Capacity is 5.76 lakh tonnes a year after Metallurgica. Group utilisation was 68-69% in Q2 (Ranchi subsidiary near 90-95%, the main Purulia plant around 55-60% while roads are built). Management says 85-90% is the realistic year-round ceiling and that new plants take 12-18 months to reach it. The premium SGB Limited grade is now about 60-62% of revenue.

★ Since our last report

Builds on the Q1-2027 report (boundary call 27 Jul 2026). Prior verdicts: trigger YES, consistency MAYBE.

Prior read	What we said then	What the new calls show	Movement
Trigger: YES	Funded capacity build plus a premium grade already showing in numbers.	Plant live, SGB up to 60-62% of sales, margins at a record, and now a captive mine that could cut costs.	Confirmed
Consistency: MAYBE	Same story every call, but four targets trimmed in one quarter.	FY28 target restored, plant only days late. But Q2 guide missed again and a fresh round of big promises arrived.	Unchanged
Greenfield plant	Commercial sale ~25 Sep-1 Oct, already 1-2 months late.	Commercial production 10 Oct 2026.	Confirmed (small slip)
Q2 guide ₹55-60 cr	Set in July.	₹53.6 cr delivered.	Slipping
Backward integration	"Would not comment" in July.	Mine won two months later. The silence was a live auction, not a dodge.	Improving
Rajasthan / exports	Called the "B target", after the greenfield.	Formally announced the day the greenfield went into trials, plus a Karnataka plant.	Faster than said
Working capital (184-day cycle)	Unaddressed.	Receivables and inventory rose again in Q2. Management blames a rainy quarter and seasonal additive buying, and targets group inventory of ₹30-34 cr by March 2027.	Unresolved

Verdict change this quarter: both unchanged. The trigger got stronger, with the mine adding a cost lever on top of volume and price. Consistency stays MAYBE because the plant and mine news is good, but the quarterly guide was missed again and the new promises are much larger than anything delivered so far.

★ 3. Earning-trigger thesis

The engine now has three parts. Volume: capacity has more than doubled to 5.76 lakh tonnes with Metallurgica running from October, and two smaller plants in the south and west are planned for 2027. Price: the premium SGB Limited grade is now about 60% of sales and keeps realisation near ₹9,000 a tonne. Cost: the Nawada mine, if it starts in January as planned, takes out roughly ₹1,000-1,400 a tonne of stone cost, which management says lifts margins by a few points from FY28. All three are real and two are already in the numbers. The catch is the size of the promise: FY28 revenue of ₹500-550 cr needs the new plant near full use within a year, when management itself says plants take 12-18 months to ramp, plus revenue from selling surplus mine output. And the stock at 116× already pays for it.

Trigger	What management said	Evidence so far	Horizon	Strength	Change since last report
Capacity 2.56 → 5.76 lakh t	Greenfield ramps over 12-18 months.	Commercial production from 10 Oct 2026.	FY27-FY29	Strong. Built and paid for.	↑ Plant is live
Premium SGB Limited grade	Shift the whole base to it over time.	About 60-62% of revenue, up from ~50% in Q1 and ~15% two quarters ago.	Now	Strong. In the price line.	↑ Still climbing
Nawada quartzite mine	Mining from mid-Jan 2027; stone cost ₹2,700-3,200 → ₹1,400-1,500 a tonne.	Auction won, deposit paid. No mining yet; approvals pending.	Q4 FY27 onward	Moderate. Big if it lands.	New
Hospet + Udaipur plants	3 lakh t for ₹45 cr, Jul and Nov 2027, self-funded.	Land being bought. Raw-material source for these plants not disclosed.	FY28-FY29	Unproven.	New
High-value silica products	Tech partner in Europe or China to be finalised "in 15-20 days".	Nothing signed or named.	Unclear	Unproven.	Unchanged

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
Oct 2025	FY26 sales ₹140-160 cr, buy Mineral India.	Mineral India bought; FY26 sales ₹135 cr, just under.	Partly
Jan 2026	Brownfield to 2.56 lakh t, launch SGB Limited.	Both done on time.	Delivered
May 2026	Q1 FY27 sales ₹50-52 cr; plant live late Q1/early Q2.	Q1 ₹47 cr; plant slipped to October.	Missed / Partly
Jul 2026	Q2 sales ₹55-60 cr; SGB 60-65% in Q2; commercial sale ~25 Sep-1 Oct.	Q2 ₹53.6 cr; SGB 60-62%; production from 10 Oct.	Partly
Jul 2026	FY27 "approximately ₹250 cr".	H1 ₹100.8 cr. H2 needs about ₹150 cr, roughly half as much again per quarter as Q2.	Too early, stretched
Sep-Oct 2026	Mine live mid-Jan 2027; FY28 ₹500-550 cr; two plants in 2027; margins up "at least 4-5 points" (Sep), then "2-3% plus or minus" (Oct).	None testable yet.	Too early

Narrative drift. The core story (more capacity, a premium grade, eastern-India steel demand) hasn't moved, and July's dodges about raw material turned out to hide a real mine auction. That's fair to them. What did shift is

ambition. In July the FY28 rupee target had faded into "the largest". By late September it was back at ₹500-550 cr, and by late October the company was calling itself a future "specialised silica handler" with ROCE talk above 40%. The margin uplift from the mine was put at "at least 4-5%" on one call and "2-3% plus or minus" a month later. Meanwhile the hard numbers keep landing a little short: two quarterly guides missed in a row, the plant a few weeks late each time. Receivables and stock rose again in Q2, and the explanation (rain, seasonal buying) is plausible but unproven. A capable operator, but the talk now runs well ahead of the record.

5. Bottom line: two verdicts

Durable earning trigger? → YES · vs last quarter: unchanged

Nothing knocked this down and two things firmed it up. The greenfield plant is producing, and the premium grade climbed again to about 60% of sales, so both the volume and price levers are working. The mine adds a third lever on cost that could matter more than either, though it's still a plan until stone comes out in January. Deductions: the consolidated growth is partly an acquisition effect, the FY28 number assumes a faster ramp than management's own 12-18 month rule, and at 116× earnings there's no room for a stumble.

Management consistent? → MAYBE · vs last quarter: unchanged

Some things improved. The plant arrived within days of the July date, the FY28 target came back, and the July silence on raw material is now explained. But the second quarterly guide in a row was missed, the FY27 target needs a very steep second half, the margin story changed between two calls a month apart, and the working-capital build wasn't fixed. The story is steady and the operator is good. The promises are just getting bigger faster than the record behind them. Six calls in, that's still a MAYBE.

Sources: Monolithisch India investor call (30 Sep 2026, filed 2 Oct 2026) and Q2/H1 FY27 earnings call (29 Oct 2026), both via Screener.in and read in full; earlier calls carried forward from our Q4-2026 and Q1-2027 reports; Screener.in financials as at 6 Nov 2026. Call figures are consolidated; Screener's quarterly table is standalone. Not investment advice.
