

Monolithisch India Ltd

Concall Tracker · Q1 FY2027 (quarter ended 30 June 2026) · NSE Emerge (SME): MONOLITH · Report prepared 3 Aug 2026 · continues the Q4-2026 report

Not investment advice. Do your own due diligence. An AI-generated reading of the company's own earnings-call transcripts and public financials.

1 Snapshot

What the business does: Monolithisch makes **ramming mass** — a heat-proof silica powder that is rammed by hand into the inside wall of an *induction furnace*, the electric pot that India's smaller "secondary" steel makers use to melt scrap and sponge iron into steel. The lining takes the heat so the furnace shell does not, and it burns away and must be re-packed every few days. That makes it a **consumable** — a repeat purchase tied to how much steel the customer melts, not a one-off machine sale. Monolithisch is the leader in the *pre-mixed* version (the chemical additives are already blended in, so the customer just pours and rams), sells about 80% of India's integrated secondary-steel plants, and runs from a single campus at Purulia in West Bengal, right beside the eastern steel belt. It listed on the NSE Emerge small-company platform in 2025.

Measure	Value	What it means in plain words
Market cap	₹1,930 cr	What the whole company is worth on the stock market. Up from ₹1,600 cr at our last report — the shares have risen ~21% in three months.
Share price	₹888	Trading at the very top of its 12-month range of ₹367–893. Nothing about the price is cheap or forgotten.
Price-to-earnings (P/E)	87.9×	Buyers are paying ₹88 for every ₹1 of last year's profit. Extremely expensive — the price already assumes the expansion works.
FY26 revenue (consolidated)	₹135 cr	Total sales in the year to March 2026, up ~39% on FY25. Screener's standalone line shows ₹121 cr; the gap is the Mineral India subsidiary.
Q1 FY27 revenue	₹47 cr	Sales in the June 2026 quarter — the biggest quarter the company has ever had, and 16% more than the quarter before.
Q1 FY27 net profit	₹10 cr	What was left after every cost and tax. Roughly ₹21 of profit per ₹100 of sales — very high for a powder sold to steel mills.
Operating margin (EBITDA)	28%	EBITDA = operating profit before interest, tax and wear-and-tear. ₹28 per ₹100 of sales — a record, but above management's own 22–25% guidance.
Return on capital (ROCE)	30.5%	The business earns ₹30.5 a year for every ₹100 of capital in it. Very high — though down from 61% in FY25 because the IPO cash has not yet been put to work.
Borrowings (Mar 26)	₹3 cr	Almost no debt at all, against ₹30 cr of investments and ₹105 cr of reserves. Effectively debt-free, funded by the IPO.
Cash conversion cycle	184 days	Cash is tied up in stock and unpaid bills for six months before it comes back. Was 147 days in FY25 — getting worse, and the weakest part of the accounts.

2 Concall coverage — split view

Quarter	Call date	Read for this report?
H1 FY26 & Q3 FY26 (2 calls)	16 Oct 2025 30 Jan 2026	Carried forward from the Q4-2026 report — not re-read this quarter.
Q4 & FY26 (prior coverage boundary)	04 May 2026	Boundary call. Its content is carried forward from the Q4-2026 report and re-stated here where needed.
Q1 FY27	27 Jul 2026	Newly deep-read in full ★

Coverage check — done independently of the scraper. Screener's document page for MONOLITH lists **exactly four concall rows**: Oct 2025, Feb 2026, May 2026 and Jul 2026. All four carry a genuine *Transcript* link, and all four transcripts were downloaded and are readable. **There are no missing transcripts and no rows without one.** Only one call — Q1 FY27 — is new since our last report, and it is the one deep-read in full here; the earlier three are backstory carried forward. **This is a very short history: four earnings calls in total, spanning ten months (Oct 2025 – Jul 2026), because the company only listed in 2025.** There is no pre-listing record and no full business cycle to judge against. Every consistency judgement in Section 4 rests on those four calls and should be read with that in mind.

★ Latest concall highlights — Q1 FY27 (call held 27 July 2026)

- **Record quarter on every line.** Consolidated revenue **₹47 cr** (up 64% on a year ago, up 16% on the March quarter), operating profit **₹13 cr** (up 99%), net profit **₹10 cr** (up 135%). Plain read: the best three months in the company's history. **But the 64% is flattered** — a year ago the Mineral India subsidiary was not part of the group. On a like-for-like parent-company basis, Screener shows sales of ₹35.4 cr against ₹28.8 cr: **+23%, not +64%**. That 23% is the honest organic growth number.
- **The premium product exploded. SGB Limited** — a longer-lasting grade that gives the customer 15–20% more furnace life plus a written minimum-heat assurance — jumped from about **15% of revenue in the March quarter to ~50% in this one**, on 20,500 of the 52,000 tonnes sold. It carries a ₹700–800 premium per tonne against ₹250–300 of extra cost, so roughly ₹500 a tonne drops through. Plain read: this is why average selling price rose from ~₹8,300 to **₹9,000 a tonne — half the quarter's growth came from price, not volume** (volumes were up only ~7%).
- **The new plant is six weeks away — but slipped.** The greenfield factory ("Metallurgica") gets its dry run on 14 Sep 2026, trials to 30 Sep, and first commercial sale around 25 Sep – 1 Oct. It more than doubles capacity from **2.56 lakh to 5.74 lakh tonnes a year**. Management admitted a **"1 to 2 months delay"** caused by a shortage of civil labour. Of ₹44.90 cr of IPO money earmarked for it, ₹28.79 cr is spent and ₹15.69 cr is left.
- **The full-year target was quietly trimmed.** Last quarter the guidance was **₹250–300 cr** for FY27. This quarter it is **"approximately ₹250 cr"** — the bottom of the old range — split as ₹200–210 cr from existing plants and only ₹40–50 cr from the new one. Q2 is guided at ₹55–60 cr. Plain read: three months in, the ceiling has already come off the year.
- **Tone: confident on product, evasive on detail.** Asked about backward integration into raw material, the answer was "I would not comment on that at the moment." Asked about acquisitions: "no update." Asked to explain the moat: "come across to the office." Asked why the tax rate dipped last quarter, the Chairman — who is also the CFO — said "send me a mail." Demand itself sounds strong: the order book runs at **130–135% of what the company can currently supply**.

Business mix & capacity (Q1 FY27). Domestic ~94–95% / exports ~5–6%. Exports were ₹2–3 cr of the ₹47 cr, all routed through Indian trading houses into Nepal and Bangladesh — up from a token ~1% at our last report, but still almost nothing. Management says payments from both countries have been "disturbed" for one to two years, which is why direct selling stopped. Plain read: **this remains an India-steel story, not an export story**. The planned Rajasthan unit aimed at Middle-East/Africa exports is now explicitly the *"B target"* — after the greenfield, not alongside it. **Capacity 2.56 lakh tonnes a year, running at ~70% at group level** in Q1 (the Mineral India subsidiary alone ran at ~87% on its newly raised 72,000-tonne base). Plain read: utilisation looks worse than FY26's 81.5% only because the denominator grew — they built the capacity before filling it, which is deliberate. Management wants to operate at **85–90%**. On commissioning, capacity goes to **5.74 lakh tonnes**, which management values at **₹495–500 cr of revenue at today's prices — but says 90–95% utilisation is "one-and-a-half to two years" away**. Plain read: the ₹500 cr number is a FY29 shape, not a FY28 one.

★ Since our last report

This builds on our **Q4-2026 report**, whose coverage stopped at the **Q4 & FY26 call of 4 May 2026**. Its two verdicts were **durable earning trigger → YES** and **management consistent → MAYBE**. One new call has happened since (Q1 FY27, 27 Jul 2026) and it is the only one deep-read here.

Prior read	What we said then	What the new call shows	Movement
Verdict: trigger	YES — a funded 4× capacity build plus an acquisition and a premium product, already visible in the numbers.	Record quarter, realisation up 8% in three months on the premium grade alone, order book at 130–135% of supply. The driver is working harder than we assumed.	Confirmed
Verdict: consistency	MAYBE — same story every call and largely delivered, but only three calls of history and the big promises untested.	Excellent delivery on the product promise; but the FY27 target was trimmed, Q1 missed its own quarterly guide, and the plant slipped 1–2 months.	Mixed

Premium product SGB Limited : 60%+ of customers to switch; only 10–12% converted at Q4.	"Moderate — early traction, migration unproven."	~ 50% of revenue in one quarter , from ~15%. Guided to 60–65% in Q2 and 60–70% by year end. Delivered far faster than promised.	Improving
Greenfield plant live "late Q1 / early Q2 FY27"; capacity to 5.74 lakh tonnes.	"On schedule so far — but not yet built or sold."	Dry run 14 Sep, commercial sale ~25 Sep–1 Oct. Management concedes a 1–2 month delay from a civil-labour shortage. Capex 64% deployed.	Slipping (mildly)
FY27 revenue ₹250–300 cr at 22–25% margin.	"An ambitious promise that is still unproven."	Cut to " approximately ₹250 cr " — the floor of the range — in the first quarter of the year. Margin band 22–25% reaffirmed unchanged.	Slipping
" 5× by FY28 " — ₹450–500 cr of revenue.	"Too early."	Restated as ₹495–500 cr of <i>capacity potential</i> needing 1.5–2 years to fill, and FY28 is now described only as "largest in what we manufacture and sell". The rupee target for FY28 has quietly disappeared.	Slipping
Mineral India subsidiary, 72,000 t/yr, awaiting approvals.	"Strong — real and already contributing."	Approvals done, capacity lifted 56,000→72,000 t, ran at ~87%. But its unusually fat Q1 margin came from cheap old stock (additive bought at ₹130–135 vs ₹150–155 today) — a one-off that reverses.	Confirmed
Working capital — 184-day cash cycle, very high inventory.	Flagged as a caution.	Not addressed at all. No analyst asked, and management did not volunteer it. FY26 operating cash flow was ₹9 cr against ₹19 cr of standalone profit.	Unresolved

Verdict change this quarter. The **trigger verdict stays YES — unchanged**, and if anything it is better evidenced than a quarter ago: the premium-product migration that we called "unproven" has become half of revenue in ninety days and is visibly lifting realisation, and the plant is now weeks rather than quarters away. The **consistency verdict stays MAYBE — unchanged**, and it is unchanged for a reason that matters: a record quarter arrived *in the same breath* as a trimmed full-year target, a missed quarterly guide and a slipped plant date. Neither verdict moved, but the reasons behind each shifted in opposite directions.

★ 3. Earning-trigger thesis

The engine is unchanged from last quarter and it is simple: **sell more tonnes, and sell each tonne for more**. On volume, Monolithisch is more than doubling capacity from 2.56 to 5.74 lakh tonnes a year with a new plant that starts producing in late September 2026, into a market where its order book is already 130–135% of what it can supply. On price, the new **SGB Limited** grade lets it charge ~₹500 a tonne more after costs, and it went from 15% to 50% of revenue in a single quarter. Both levers pulled together this quarter: revenue rose 16% on volumes up only ~7%, with the rest coming from a jump in average price from ~₹8,300 to ~₹9,000 a tonne. The company is nearly debt-free, earns 30%+ on capital, and the expansion is already paid for out of IPO money. **The catch is the same catch as last quarter, just closer:** the ₹495–500 cr prize needs 90–95% utilisation, which management now says is one-and-a-half to two years out, and the full-year target has already been trimmed once. This is a real trigger with a slower fuse than the guidance implied three months ago.

Trigger	What management said	Evidence so far	Horizon	Strength	Change since last report
Premium grade SGB Limited	60–70% of revenue by end-FY27; ₹700–800/t premium for 15–20% longer furnace life.	15% → 50% of revenue in one quarter ; 20,500 t of 52,000 t. Realisation ₹8,300 → ₹9,000/t. Customers convert in ~6 weeks of trial.	Now	Strong Delivered ahead of promise and visible in the price line.	↑ Improving Was "moderate, unproven". Now the single best-evidenced part of the story.

Greenfield capacity 2.56 → 5.74 lakh t	Commercial output from ~late Sep 2026; ₹40–50 cr of FY27 revenue; ₹495–500 cr at full run-rate.	Capex 64% spent (₹28.79 cr of ₹44.90 cr); land expanded 12.5 → 14–15 acres; dry-run date fixed. But 1–2 months late and full utilisation 1.5–2 yrs away.	FY27–FY29	Moderate Nearly built and clearly funded, but not one rupee of it has been sold yet.	→ Unchanged Closer to reality, but the date slipped and the payoff moved right.
Mineral India subsidiary	Adds ₹55–60 cr of sales; capacity raised 56,000 → 72,000 t.	Ran at ~87%; contributes roughly ₹11–12 cr of the ₹47 cr quarter. Its Q1 margin was inflated by cheap pre-bought additive and will normalise.	Live now	Strong Real, consolidated and earning — just not at Q1's margin.	→ Unchanged Approvals cleared as promised; the margin quality is the new caveat.
Structural demand for ramming mass	India consumes 18–22 lakh t/yr; 14 lakh t sits with unorganised makers and is up for grabs.	Order book at 130–135% of supply capacity — the strongest single fact on the call. But the market-size numbers are management's own estimate of a "non-surveyed industry".	Multi-year	Moderate The order book is hard evidence; the market maths is not independently verifiable.	↑ Improving Last quarter this was an assertion. The order-book figure gives it substance.
New silica-based products / exports	A "high specialty silica opportunity"; Rajasthan unit for Middle-East/Africa export.	Nothing concrete. Details deferred to the AGM; Rajasthan demoted to the "B target"; exports still only ₹2–3 cr a quarter via traders.	Unclear	Unproven An ambition, not yet a plan with numbers or dates.	↓ Weakening The export/Rajasthan leg has been explicitly pushed behind the greenfield.

4 Management consistency scorecard

Period	What was promised	What actually happened	Verdict
Oct 2025 (maiden call)	FY26 sales ₹140–160 cr and profit ₹22–24 cr; capacity to 5.74 lakh t; buy Mineral India.	Mineral India duly acquired Nov-25; guidance repeated without change the following quarter.	Delivered (mostly)
Jan 2026 (Q3 FY26)	Brownfield expansion "complete", capacity 2.56 lakh t; SGB Limited rollout beginning.	Brownfield finished and 2.56 lakh t reached on schedule; SGB Limited launched on time.	Delivered
May 2026 (Q4 / FY26)	Hit the full-year guide.	Sales ₹135 cr — just under the ₹140–150 cr promised — but profit ₹23 cr landed inside the range and margins beat.	Partly
May 2026 (Q4 / FY26)	Q1 FY27 revenue of roughly ₹50–52 cr.	Delivered ₹47 cr — about 7–8% short . Management blamed the plant delay and offered the hedge that "you could always expect us to fall short of 2% to 5%". The actual miss was bigger than the hedge they offered.	Missed
May 2026 (Q4 / FY26)	60%+ of customers to migrate to SGB Limited over FY27; 10–12% converted at that point.	Reached ~50% of revenue within one quarter , well ahead of the implied pace, and lifted realisation with it.	Delivered — early
May 2026 (Q4 / FY26)	Greenfield plant live "late Q1 / early Q2 FY27".	Now late Sep 2026 — a 1–2 month slip, openly admitted and attributed to civil-labour shortage rather than excused away.	Partly
Jul 2026 (Q1 FY27)	FY27 ₹250–300 cr becomes "approximately ₹250 cr"; FY28's ₹450–500 cr becomes "largest in what we manufacture", with no rupee figure.	Too soon to score the outcome — but the <i>act</i> of trimming both targets three months after setting them is itself the observation.	Too-early / drift
Ongoing	Backward integration into raw material; further acquisitions; the specialty-silica plan; the 184-day cash cycle.	All four went unanswered on this call — "would not comment", "no update", "we'll explain at the AGM", and not raised at all respectively.	Unanswered

Narrative drift. The *strategic* story has not drifted at all in four calls: capacity, the Mineral India bolt-on, and the SGB Limited premium grade — the same three pillars, in the same order, every time, with no pivot into anything unrelated. That steadiness is genuine and it is rare in a newly listed small company. What has started to drift is the **numbers attached to the story**, and it has started early. In three months the FY27 target went from a range to its floor, the FY28 rupee target

dissolved into an adjective, the plant date moved by up to two months, and the very first quarterly guide the company gave was missed by more than the error band management itself proposed. To be fair on the other side: the miss was owned rather than spun, the labour-shortage explanation was given plainly, and management volunteered that the subsidiary's fat Q1 margin came from cheap old inventory and explicitly refused to guide margins above 25% despite printing 28% — that is honest, and it is the same refusal-to-oversell that kept the previous verdict from falling further. There is also a **disclosure roughness** that has now confused analysts on two consecutive calls: ₹4–6 cr of inward freight is parked in "other expenses" rather than raw material, and the company switched from delivered (FOR) to ex-plant pricing part-way through, so the reported gross margin of 75.7% is really ~66% like-for-like and year-on-year comparisons are not clean. Add that the Chairman, who is also the Chief Financial Officer, could not explain his own tax rate on the call, and about ₹4.5–5 cr of the ₹47 cr is low-value trading of bought-in additives rather than manufacturing, and the picture is of a genuinely good operator whose financial communication has not yet caught up with its operations.

5 Bottom line — two verdicts

Durable earning trigger? → YES · vs last quarter: unchanged

Nothing moved this verdict down and one thing pushed it further up. The part of the thesis we called "unproven" three months ago — the premium SGB Limited grade — went from 15% to **50% of revenue in a single quarter**, lifted the average selling price from ~₹8,300 to ~₹9,000 a tonne, and supplied roughly half of the quarter's 16% growth without needing a single extra tonne of capacity. That is the cleanest evidence yet that this company can raise price, not just volume, in what looks from the outside like a commodity. Behind it sits a funded, 64%-paid-for plant that more than doubles capacity in about six weeks, an order book running at 130–135% of what the company can currently supply, near-zero debt and a 30%+ return on capital. The trigger is real, concrete and already partly delivered. Three honest deductions keep it from being a slam dunk: the headline "+64% revenue, +135% profit" is inflated by consolidating a subsidiary that was not there a year ago (the like-for-like number is +23% sales), part of that subsidiary's fat margin came from cheap old stock that will not repeat, and the ₹495–500 cr full-capacity prize is now a one-and-a-half to two-year job rather than an FY28 one. And at 88 times earnings, the share price has already bought all of it.

Management consistent? → MAYBE · vs last quarter: unchanged

A record quarter did not upgrade this verdict, and the reason is the whole point. In the same call that announced the best results in the company's history, management **trimmed the FY27 revenue target from ₹250–300 cr to "approximately ₹250 cr"**, let the FY28 "₹450–500 cr" figure dissolve into a phrase about being "the largest", pushed the greenfield plant back by one to two months, and missed the very first quarterly guide it ever gave by 7–8% — more than the 2–5% error band it offered as cover. Four moving targets in the first quarter of a two-year plan is not a good habit to be forming this early. Against that, the case for not downgrading is solid: the strategy itself has not wavered across all four calls, the SGB migration was delivered far faster than promised, the plant delay was owned plainly rather than buried, and management refused to guide margins up to the 28% it had just printed — flagging instead, unprompted, that the subsidiary's margin came from cheap old inventory. Two structural cautions remain unanswered and should be watched: the cash conversion cycle has stretched to 184 days with operating cash flow at less than half of profit, and no one on this call asked about it; and the reporting itself is rough enough — inward freight buried in other expenses, a mid-stream switch from delivered to ex-plant pricing, a CFO who could not explain his own tax rate — that analysts have now been confused two calls running. With only four calls and ten months of public record, this verdict cannot fairly be a YES yet; but nothing here yet justifies a NO either.

Sources: Monolithisch India Ltd earnings-call transcript for Q1 FY27, held 27 July 2026 and filed with NSE on 29 July 2026 (deep-read in full for this report), sourced from Screener.in; the three earlier transcripts of 16 Oct 2025, 30 Jan 2026 and 4 May 2026 carried forward from our Q4-2026 report; Screener.in financial history (profit & loss, quarterly results, balance sheet, cash flow, ratios, shareholding) as at 3 Aug 2026. Screener lists four concall rows for this company and all four carry a working transcript link — there are no gaps in coverage, but there are also only four calls in existence.

A note on the numbers: figures quoted from the call are *consolidated* (management's basis — Q1 FY27 revenue ₹47 cr, EBITDA ₹13 cr, profit ₹10 cr). Screener's quarterly table is *standalone* and shows ₹35.41 cr, ₹8.32 cr and ₹6.91 cr for the same quarter. Both are correct on their own basis; the difference is the Mineral India Global subsidiary, consolidated only from November 2025.

On the listed peer: an analyst on the call raised the other listed ramming-mass maker, Raghav Productivity Enhancers, as having ~4.5 lakh tonnes of capacity. Management put "one player" at 3–4 lakh tonnes against its own current ~2 lakh, and said that once the greenfield plant runs, "in terms of capacity... we would have the largest". On nameplate capacity that claim is credible; on tonnes actually sold, Monolithisch is still the smaller of the two today.
