# V-Marc India Ltd

Concall-tracker report · Q1 FY27 (Apr-Jun 2026) · NSE (SME): VMARCIND · **NO-CONCALL PATH · web deep-dive** · builds on the Q4-2026 report

**No concall transcripts were available on Screener, so this report is based on a global web deep-dive.** V-Marc is an SME listing that doesn't hold earnings calls. Sources: the Q1 FY27 result filing (12 Aug 2026), the company's press release and investor presentation (18 Aug 2026), its NSE order disclosures and market coverage published up to 30 Sep 2026.

## 1. Snapshot

**V-Marc India** makes electrical wires and cables: building wires for homes and offices, and high- and low-tension power cables for electricity utilities, EPC contractors and infrastructure jobs. It sells to government utilities, to contractors, through a dealer network, and since FY26 overseas.

| Figure | Value | Plain read |
|---|---|---|
| Q1 FY27 revenue | Rs 556 cr | Up 102% on last year's June quarter. Sales doubled again. |
| Q1 FY27 EBITDA | Rs 59 cr, 10.7% margin | Up 95%, but the margin slipped from 11.1% and sits just under the 11-12% band management targets. |
| Gross margin | 19.6% (from 23.1%) | Costlier copper and aluminium squeezed what it keeps on each sale. |
| Q1 FY27 net profit | Rs 28.5 cr | Up 163%. Net margin rose to 5.1% from 3.9% as fixed costs spread over a much bigger base. |
| Market value (mid-Aug) | about Rs 5,300 cr, P/E ~45 | Up from about Rs 3,800 cr at our last report. The stock prices in a lot of growth. |
| Promoter holding | about 65% | Founders still own about two-thirds. |

## 2. Coverage: sources used

| Period / source | What it gave | Status |
|---|---|---|
| FY24 → FY26 (results, presentations, NSE filings, news) | Capacity build-out, dealer push, first exports, FY27 guide | Carried forward from Q4-2026 report |
| Q1 FY27 results (12 Aug 2026), press release & presentation (18 Aug 2026) | Quarter numbers, product and channel mix, exports | Newly read in full ★ |
| NSE disclosure: three Purvanchal Vidyut Vitran Nigam LOIs (12 Aug 2026) | New utility orders | Newly read ★ |
| Business News Today, Univest, Arthneeti, INDmoney (Aug-Sep 2026) | Cross-check of figures, market data | Newly read ★ |

Only the June-quarter material was read in full this time. The backstory comes from the Q4-2026 report.

### ★ Latest update highlights · Q1 FY27 (results 12 Aug 2026)

- **Sales doubled, profit up 163%.** The chairman called it "our strongest first quarter so far." Read: well ahead of the 40%+ full-year growth guide.
- **Building wires are now the biggest product** at Rs 247 cr, more than triple a year ago, ahead of high-tension cables (Rs 237 cr, up 70%). Read: the dealer-led mix shift is happening fast.
- **Exports Rs 63 cr in one quarter**, about the same as all of FY26, from nothing a year ago. Read: the new export channel is real.

- **New orders:** three letters of intent from Purvanchal Vidyut Vitran Nigam worth about Rs 101 cr (with GST) for 11 kV and 33 kV cables, due by January 2027, with a price-variation clause that protects against metal-price jumps.
- **The catch:** gross margin fell more than 3 points on input costs, and EBITDA margin dipped to 10.7%. The board also sought to lift its borrowing limit from Rs 800 cr to Rs 1,000 cr, a ceiling, not new debt.

**Business mix & capacity.** Domestic about 89%, exports about 11% of Q1 revenue (from about 3.5% in FY26). Read: exports have gone from a footnote to a real slice in one quarter. Capacity was about 2.1 lakh circuit-km at FY26 end, with about Rs 500 cr of capex to FY30 aiming beyond 10 lakh circuit-km, phased from FY27. A utilisation figure isn't disclosed.

### ★ Since our last report

Builds on the Q4-2026 report (FY26 results, May 2026). Prior verdicts: trigger **YES**, consistency **YES**.

| Prior read | What we said then | What Q1 FY27 shows | Movement |
|---|---|---|---|
| Trigger: capacity + dealers + mix + exports | Clear and playing out | Revenue doubled again, building wires now the largest line, exports scaling | Confirmed |
| Consistency | Beat FY25 and FY26 targets | Q1 growth far above the 40%+ FY27 guide | On-track |
| Promise: FY27 margin 11-12% | Too early | Q1 at 10.7%, input costs bit | Slipping (slightly) |
| Promise: exports to US/EU/ Australia/Japan | Genuine start, unproven at scale | Rs 63 cr in one quarter, ~11% of sales | Improving |
| Promise: backward integration to protect margins | Unproven | Not visible yet; gross margin fell | Slipping |

**Verdict change:** none. Trigger stays YES, consistency stays YES. The growth story got stronger. The margin miss is small but it's the one thing to watch.

## 3. Earning-trigger thesis

### ★ The trigger: more capacity, more dealers, richer mix, and now exports

V-Marc keeps adding cable-making capacity and pushing building wires through a growing dealer network, and that's exactly where this quarter's growth came from. Exports, a rounding error last year, now bring in about a tenth of sales. New utility orders keep landing. What doesn't scale as neatly is margin: copper and aluminium costs ate into gross profit, and the backward-integration plan meant to protect it hasn't shown up yet. Revenue growth is clear. Whether profit keeps pace depends on passing metal costs through.

| Trigger | What management said | Evidence so far | Time horizon | Strength | Change since last report |
|---|---|---|---|---|---|
| Capacity expansion | ~Rs 500 cr capex to FY30; 10 lakh+ circuit-km | Sales doubled on the FY26 build-out; phased additions from FY27 | To FY30 | Strong | unchanged |
| Building wires / dealers | Grow dealer-led building wires | Building wires up 256%, now largest line; dealer sales nearly doubled | Ongoing | Strong | ↑ |
| Exports | US/EU/Australia/Japan | | 1-3 years | | |

| | | | | | |
|---|---|---|---|---|---|
| | | Rs 63 cr in Q1 vs nil a year ago | | Moderate-to-Strong | ↑ scaling quickly |
| Utility orders | Keep winning B2G tenders | ~Rs 101 cr Purvanchal LOIs; B2G sales +61% | Near-term | Moderate | unchanged |
| Backward integration | In-house compounds/ conductors to support margin | Gross margin down to 19.6% | Medium term | Unproven | ↓ margin slipped |

## 4. Management consistency scorecard

No earnings calls, so this checks stated targets in releases and presentations against results.

| Period | What was promised | What actually happened | Verdict |
|---|---|---|---|
| FY25 | Revenue Rs 750-800 cr | Rs 896 cr | Delivered (beat) |
| FY26 | Growth 40-50%, margin ~11-12% | +99%, margin 11.2% | Delivered (far exceeded) |
| Exports | Start exporting, build overseas team | Rs 63 cr in FY26, then Rs 63 cr in Q1 FY27 alone | Delivered |
| FY27 (Q1 check) | 40%+ growth | +102% in Q1 | On track (ahead) |
| FY27 (Q1 check) | EBITDA margin 11-12% | 10.7% in Q1 | Partly |

**Narrative drift:** none. The plan is the same one, just bigger each year: capacity, dealers, building wires, exports. Targets keep getting beaten on revenue. The one soft spot is margin, which has never really moved off about 11% despite talk of mix and backward integration. Disclosure is still press releases only, with no call to quiz them.

## 5. Bottom line: two verdicts

**Durable earning trigger? → YES** vs last quarter: unchanged
Nothing moved this down. Another doubling of sales, building wires now the largest line, exports scaling fast and fresh utility orders all confirm the driver. The weak spot is margin: higher metal costs ate into gross profit, so profit growth relies on volume, not pricing power.

**Management consistent? → YES** vs last quarter: unchanged
They're running far ahead of their own revenue guide again and doing what they said on exports and capacity. The small margin shortfall against their 11-12% band and the lack of earnings calls keep this a careful YES.
