

GE Vernova T&D India Ltd

Concall Tracker — is there a real earnings driver, and has management stuck to its word?

Reading of the last 12 earnings calls (Q1 FY24 → Q4 FY26) · 04 Jul 2026 · source: company concall transcripts via Screener.in · formerly GE T&D India

Plain-word key: **T&D** = transmission & distribution — the towers, cables and equipment that carry electricity from power plants across the country. **The kit it makes:** transformers, high-voltage switchgear, and grid-control systems. **HVDC** = high-voltage direct current, the technology for moving huge amounts of power over long distances (e.g. from desert solar farms to cities). **Order backlog / book** = orders already won but not yet built — i.e. future revenue you can already see. **EBITDA / operating margin** = operating profit as a % of sales. **₹1 crore = ₹10 million.**

1 Snapshot — what this business is

GE Vernova T&D India (until 2024 called GE T&D India) makes the **heavy electrical equipment that carries power across the grid** — large transformers, high-voltage switchgear and grid-control systems. It is a direct beneficiary of India's enormous spending to expand and modernise its power grid, especially to connect new solar and wind farms.

Number (year to March, from the calls)	Value	What it means in plain words
Revenue FY26	₹6,210 cr	Total sales, up a big 45% from ₹4,290 cr in FY25 — and FY25 itself was up 35%.
Operating margin FY26	~27%	For every ₹100 of sales, ~₹27 is operating profit — tripled from under 11% two years ago as the factories filled up.
Pre-tax profit FY26	₹1,710 cr	More than double FY25's ₹820 cr — profit is growing much faster than sales.
Order backlog	₹21,460 cr	Orders won but not yet built — up 49% in a year, and worth about 3 years of sales . This is future revenue you can already see.
New orders won FY26	~₹14,700 cr	The value of fresh orders booked during the year — more than double the sales, so the backlog keeps growing.
Cash & debt	₹2,500 cr, zero debt	Net cash of ~₹2,500 cr and no borrowings; dividend raised to ₹10/ share.

The company's automated financials table on Screener is stale (it changed its year-end), so these snapshot figures are taken directly from management's statements on the calls.

2 Which calls were read

All **12 quarterly earnings calls over the last three years** were read in order, Q1 FY24 (Aug 2023) → Q4 FY26 (May 2026) — a full, unbroken run.

Financial year	Calls read
FY24	Q1 (Aug 2023) · Q2 (Nov 2023) · Q3 (Feb 2024) · Q4 (May 2024)
FY25	Q1 (Aug 2024) · Q2 (Nov 2024) · Q3 (Feb 2025) · Q4 (May 2025)
FY26	Q1 (Aug 2025) · Q2 (Nov 2025) · Q3 (Feb 2026) · Q4 (Jun 2026)

3 The earnings trigger — what management says will grow profit

HEADLINE

Yes — a strong, already-proven driver. India is spending roughly **₹9 lakh crore on its power grid by 2032**, and that flood of orders has pushed GE Vernova's backlog to about three years of sales while filling its factories. As the plants filled, profit margins **tripled from under 11% to ~27%**. FY26 shows it plainly: sales +45%, profit more than doubled. The *next* leg — giant long-distance "HVDC" power links — has just started being won but only turns into revenue around FY28-29.

Driver	What management said	Evidence so far	Horizon	Strength
Grid-capex order boom	India's ₹9 lakh-cr grid build-out to 2032 drives orders across all products	Backlog grew ~5.5x in 3 years to ₹21,460 cr (~3 years of sales)	Now → to 2032	Strong
Margin expansion	Filling factories + a richer mix of exports and products lifts margins	Delivered — operating margin 11% → 19% → ~27% over three years	Now	Strong
Exports (incl. GE group)	Higher-margin export orders, some from the global GE Vernova group	Real (peaked ~30-40% of orders) but lumpy ; a big group order keeps slipping	Ongoing	Moderate
HVDC / long-distance power links	Big future driver; localising valve & control manufacturing in India	First large order (Adani) won only in Q4 FY26 — revenue only from FY28-29	FY28-29	Strengthening
Data-centre demand	Power kit for AI/data-centre build-outs, incl. US exports	Talked about since 2024; still a "4-5 year" story, nothing booked yet	Long	Early

4 Has management been consistent? — promised vs delivered

What was promised	When	What actually happened	Verdict
Sustain ~₹1,000 cr of new orders per quarter	Q2 FY24	Sustained and far exceeded — FY26 orders ~₹14,700 cr	Delivered
Margins to reach "mid-to-high teens", later "mid-20s"	FY25 → FY26	Beat it — FY25 19%, FY26 ~27%. Guidance kept <i>trailing</i> reality, not leading it	Beat
FY26 revenue of ₹5,500–6,000 cr	Q2 FY26	Beat — FY26 came in at ₹6,210 cr	Beat
Win big domestic HVDC (long-distance link) orders	Talked up since FY24	Landed the first large one (Adani) only in Q4 FY26 — earnings hit FY28-29	Late / too early
A ~₹3,000 cr group export order	Q2 FY26	Repeatedly deferred by the customer — now expected H2 FY27	Slipped
Don't treat peak quarters as the new normal (e.g. 29% margin)	Q1 FY26	Held the line — guided a conservative "mid-20s" even after big beats	Delivered

Has the story drifted? No — it **built logically**. It went from a turnaround tale (cut debt, exit old low-margin projects) in FY24, to a grid-supercycle order story in FY25, to margin normalisation plus HVDC optionality in

FY26 — with the same core thread ("grid spending + rising margins") intact throughout. Most tellingly, management has a consistent habit of **under-promising and over-delivering**: it repeatedly refused to treat blow-out quarters as the new baseline and held conservative guidance even after beating. The only recurring blemish is a big related-party (GE group) export order that keeps being pushed back.

5 Bottom line

Durable earning trigger? → YES

This is about as clear as it gets: a multi-year national grid-spending boom has filled the order book to roughly three years of sales, and the resulting factory loading has **tripled margins** — already visible as FY26 sales +45% and profit more than doubled. A further leg (HVDC long-distance links) is now being won and will add revenue from FY28-29. The trigger is real, proven, and has years to run.

Management consistent? → YES

Management has consistently **under-promised and over-delivered** — beating its own order, revenue and margin guidance while deliberately refusing to hype peak quarters. The story evolved sensibly with nothing abandoned. The one honest blemish is a group export order that keeps slipping, but it does not undermine an unusually credible track record.

Snapshot figures are taken from management's statements on the calls (the automated financials table is stale due to a year-end change). This is not investment advice. Do your own due diligence.
