

Minda Corporation Ltd

Concall Tracker — reading the earnings calls to test for a durable earning trigger and management consistency | Report date: 11 July 2026 | Screener ticker: MINDACORP (BSE 538962)

Who this is: This is **Minda Corporation Ltd**, the **Spark Minda** group auto-parts maker (website minda.co.in). It is **NOT** "Uno Minda Ltd" — a separate, larger listed company. Confirmed from the Screener page and every transcript header, which carry the Spark Minda logo and "Minda Corporation Limited".

1. Snapshot — what the business is

What it does (one line): Spark Minda makes parts that go into vehicles — wiring bundles (the "nervous system" of a vehicle), locks and keys (called "vehicle access"), aluminium die-cast metal parts, and instrument clusters (the dashboard screens/dials). It sells mainly to two-wheeler, commercial-vehicle, passenger-car and tractor makers in India, plus some exports. It earns money by supplying more and pricier parts per vehicle over time.

Rs 16,709 cr

Market value of the company (what all its shares are worth today).

Rs 6,185 cr

FY26 total sales (consolidated), up 22.3% on last year — a strong jump after two slower years.

Rs 358 cr

FY26 net profit (consolidated), up 40.3% — profit grew nearly twice as fast as sales.

11.7%

Operating profit margin (profit before interest, tax, depreciation, as a share of sales) — steady, inching up.

~69x

Price-to-earnings: investors pay about Rs 69 for each Rs 1 of yearly profit — a very expensive price tag. (Even on the higher consolidated profit it is ~47x — still rich.)

Rs 1,484 cr

Total borrowings (FY26) — nearly triple FY24's Rs 538 cr; debt jumped to buy a stake in Flash Electronics.

Note on numbers: Screener's standalone table shows FY26 sales of Rs 5,017 cr and profit of Rs 242 cr; management's **consolidated** figures (used above, and quoted on the call) are higher because they add subsidiaries and the share of profit from associate companies like Flash Electronics. The valuation (69x) is on the lower standalone profit base. Promoters hold a steady 64.84%; big institutions have been buying (mutual funds up from ~12% to ~19%, foreign funds ~6% to ~9% over three years) — a vote of confidence.

2. Concall coverage

Read the **last 12 earnings calls in full** — every quarter from Q1 FY24 (Aug 2023) through Q4 FY26 (May 2026), a clean **three-year** run. This is a strong, gap-free base for judging both questions. Screener listed 44 calls in all; the older ones (2015–2021) were not needed and some were not downloadable, but **no call in the last three years is missing**, including the freshest one.

Financial year	Calls read	Read?
FY24 (Apr 2023–Mar 2024)	Q1 (Aug'23), Q2 (Nov'23), Q3 (Feb'24), Q4 (May'24)	Yes — all 4
FY25 (Apr 2024–Mar 2025)	Q1 (Aug'24), Q2 (Nov'24), Q3 (Feb'25), Q4 (May'25)	Yes — all 4
FY26 (Apr 2025–Mar 2026)	Q1 (Aug'25), Q2 (Nov'25), Q3 (Feb'26), Q4 (May'26)	Yes — all 4

★ Latest concall highlights — Q4 FY26 (call held 22 May 2026)

- **Record quarter across the board.** Q4 sales Rs 1,704 cr (up 29% on the year), operating profit Rs 203 cr (up 33%), net profit Rs 124 cr — each the highest ever. Plain read: the business is not just growing, it is growing faster than before.

- **Full-year FY26 was the best yet.** Sales Rs 6,185 cr (+22.3%), operating profit Rs 721 cr (+25.5%), net profit Rs 358 cr (+40.3%). Plain read: after two years near 8–9% growth, they finally cleared 20% — the long-promised acceleration showed up.
- **Order book at Rs 10,000 cr of lifetime value** (about a fifth from exports), spread over roughly 4–5 years of delivery. Plain read: work already won that will feed sales for years — a visible pipeline, not a hope.
- **Three new engines being built:** a JV with UK's **Turntide** for advanced EV motors; a JV with Japan's **Toyodenso** for switches (orders from Japanese carmakers, starts Q4 FY27); and folding in **Minda VAST** from FY27 to push car-segment sales toward a 25% share. Plain read: several fresh growth levers, but all pay off in FY27–FY28, not yet.
- **Tone: highly confident.** They reaffirmed a FY2030 goal of Rs 17,500 cr group sales at a 12.5% margin. Only caution: metal prices (steel, aluminium, copper) rose 30–40%, squeezing gross margin, though most is passed to customers.

Business mix & capacity (quick glance)

By product (FY26): Wiring harness 31%, vehicle access/locks 22%, instrument clusters 17%, die casting 15%, others (EV electronics, sensors) ~15%. **By vehicle type:** two/three-wheelers 48%, commercial vehicles 28%, passenger cars 14%, after-market 10%. Plain read: broadly spread, still tilted to two-wheelers.

Domestic vs export: India ~89% / exports ~11% of sales (FY26). Plain read: this is largely an India-demand story; exports are small but recovering after being weak for two years. About 20% of the order book is export-linked.

Capacity use: Plants running at roughly **75–80%** on average. Plain read: some room to make more before spending on new lines — and they are already adding plants (a second cluster plant by Q1 FY27, a large export die-casting plant in Pune in ~18 months).

★ 3. Earning trigger thesis

The core driver: Minda earns more from each vehicle every year by selling **more and higher-value parts** — a simple mechanical lock (Rs 400) becomes a smart key (Rs 2,000–5,000), a dial dashboard becomes a colour TFT screen (3–4x the price), a plain wire bundle gains high-voltage EV connectors. Layered on top are new businesses won recently — sunroofs, switches (Toyodenso), advanced EV motors (Turntide), and a 49% stake in fast-growing, higher-margin **Flash Electronics**. This shows up as a lifetime order book that has climbed from ~Rs 3,000 cr (2023) to **Rs 10,000 cr** now, and in FY26 it finally converted into 22% sales growth and 40% profit growth. The trigger is real and, this year, clearly playing out.

Trigger	What management said	Evidence so far	Time horizon	Strength
Content per vehicle (premiumization) — smart keys, TFT clusters, richer wiring	Kit value rising ~20% a year; smart-key use in India 3–5% → 25–30% by 2030	Working now — drove much of FY26's growth; margins edged up to 11.7%	Ongoing, multi-year	Strong — proven, recurring
Growing order book converting to sales	Rs 10,000 cr lifetime orders, delivered over 4–5 years; grow ~1.5x the industry	FY26 sales +22% vindicated years of order wins	Rolling	Strong — now visible in results
Flash Electronics stake (49%, EV/powertrain parts)		Flash FY26 sales Rs 1,803 cr, added Rs 70	Building	Moderate — helps profit,

	Higher-margin (17%+), EV-heavy; cross-sell Rs 500–600 cr by 2030	cr to profit; margin rising		cross-sell unproven
New JVs & consolidations (sunroof, Toyodenso switches, Turntide motors, Minda VAST)	Sunroof Rs 350 cr order; switches ~Rs 1,000 cr; VAST lifts car share to 25%	Orders won; production starts FY27–FY28	FY27–FY29	Unproven — future upside, not yet earning

4. Management consistency scorecard

Did they do what they said, quarter after quarter? A mixed but improving picture: **very steady and honest on margins and order-building, but a clear habit of over-promising near-term growth and slipping timelines.**

Period / promise	What was promised	What actually happened	Verdict
FY24 growth goal	Q1 FY24: firmly guided "20–25% growth for three years", defended under questioning	Quietly softened to "beat the industry" by mid-year; FY24 sales grew only 8.2%	Missed
Export recovery	FY24–FY25: exports "will come back" — repeated most quarters	Exports fell ~14% in FY24, stayed weak through FY25; only "back to normal" in Q3 FY26	Missed, then Delivered
Operating margin	Hold ~11% and move toward 12.5%	Delivered a record margin almost every quarter: 10.7% → 11.7%; never falsely claimed 12.5%	Delivered
Sunroof JV (with HCMF)	FY24–FY25: plant "commissioned Q1 FY26", revenue in FY26	Slipped a full year — first order won only Q2 FY26, production FY27	Partly / slipped
Big FY26 acceleration	Years of "the order book will convert"	FY26 sales +22%, profit +40%, exports back — it finally arrived	Delivered
EV two-wheeler orders	FY24: touted large EV 2-wheeler orders as a driver	Admitted repeatedly those customers "didn't start production" — underdelivered	Dropped

Narrative drift: The **story stayed remarkably steady** — the same six growth pillars, the same premiumization/EV/localization themes, repeated call after call, with management candidly volunteering its own shortfalls (weak exports, EV 2W flops, PAT dragged by Flash interest). What drifted was the **near-term growth number**: a bold "20–25%" in FY24 was walked back to "outperform the industry" after two soft years (8% then 9%), then **re-minted as "20–25%" again at the Nov 2025 Investor Day** once results turned. FY26 delivered, which rebuilds trust — but the fresh 20–25% and the Rs 17,500 cr FY2030 vision are only one year into a five-year clock, and the marquee new orders (sunroof, switches, Turntide) don't earn until FY27–FY28. Profit also lagged sales for two years because debt taken for the Flash stake nearly doubled interest cost (to Rs 122 cr).

5. Bottom line — two verdicts

Durable earning trigger? → YES

There is a concrete, still-live driver — more and pricier parts per vehicle, a Rs 10,000 cr order book, the Flash Electronics stake, and new JVs — and in FY26 it clearly showed up in the numbers (sales +22%, profit +40%, exports recovering, margins firm). This is no longer a promise; it is converting. Extra upside from sunroof, switches and EV motors is still to come. The trigger is real and playing out.

Management consistent? → MAYBE

Two sides. On the **plus**: disciplined and honest — record margins nearly every quarter, a steadily built order book, a stable 65% promoter holding, and open admission of their own misses. On the **minus**: a repeated pattern of over-promising near-term growth (a bold 20–25% in FY24 that they missed for two years and then re-set), a sunroof JV that slipped a full year, and touted EV two-wheeler orders that never showed up. FY26's strong delivery earns them credit, but the freshly re-minted 20–25% target and FY2030 vision are early and lean heavily on FY27–FY28 orders that haven't started. Mixed record with real drift — watch the next few quarters.

Sources: Minda Corporation Q1 FY24 – Q4 FY26 earnings-call transcripts (Screener.in) and Screener financial snapshot. Figures are as stated by management; "cr" = crore (10 million); "Rs" = Indian rupees. This is not investment advice — do your own due diligence.
