Accent Microcell Ltd

Concall Tracker · H1 FY27 (half year ended 30 Sep 2026) · filed under Q2-2027 · builds on the Q4-2026 report (call 16 May 2026) · Screener: ACCENTMIC (NSE SME) · report date 7 Nov 2026

What the company does: Makes pharmaceutical excipients, the inactive powders that hold a tablet together. Its main product is microcrystalline cellulose (MCC), made from imported wood pulp at two Gujarat plants (Pirana for India, Dahej SEZ for export), sold to drug, food, cosmetic and welding-electrode makers in 75-plus countries. A third plant, Unit III, is meant to add pricier excipients: CCS (croscarmellose sodium, which helps a tablet break up), SSG and CMC.

No concall for this period

Accent Microcell is an NSE SME company that reports **half-yearly**, not quarterly, and has held only a couple of investor calls a year. For the half year to 30 Sep 2026 it filed results (14 Oct) and an **investor presentation (15 Oct)**, and held no call, so **no transcript exists**. The owner approved building this report without one, so the H1 FY27 read is a **web deep-dive** on: the board outcome and unaudited results (14 Oct), the H1 FY27 investor presentation (15 Oct), the CRISIL rating update (22 Oct) listing and news coverage. Earlier periods are carried forward from the Q4-2026 report, which read all three transcripts (May 2025, Aug 2025, May 2026).

1 · Snapshot

METRIC (H1 FY27, STANDALONE)	VALUE	PLAIN READ
Market cap / share price	₹1,664 cr / ₹694	What the company is worth on the market (14 Oct 2026). The stock's up from a 52-week low of ₹253.
Revenue	₹174.8 cr	Six months of sales, up 25% on a year ago but down 17% on the previous half, because it cut low-margin trading.
EBITDA / margin	₹43.9 cr / 25.1%	Operating profit including other income, up 66%. Margin jumped about six points from a year ago.
Net profit	₹31.1 cr	Take-home profit up 72%. Profit margin 17.8%, against 12.6% for FY26.
Exports	72% of sales	Up 14 points on a year ago. Almost three-quarters now goes overseas.
Premium products	13.5% of sales	Higher-value grades, up from 10.5%. Still small.
Receivable days	47 (95 in March)	It now gets paid in about seven weeks, half the March wait, after a large multinational customer's extended credit ended.
Borrowings	~₹0.6 cr	Effectively debt-free.

2 · Coverage

PERIOD	SOURCE	STATUS
FY25 call (17 May 2025), investor meet (7 Aug 2025)	Transcripts	Carried forward from the Q4-2026 report
H2 & FY26 call (16 May 2026)	Transcript	Prior boundary call, carried forward
H1 FY27 (14-15 Oct 2026) ★	Results, investor presentation, exchange filings	**No call held, slides only.** Read in full

★ Latest update highlights · H1 FY27 (results 14 Oct, presentation 15 Oct 2026)

- **Smaller sales, much bigger profit.** Revenue fell versus the March half but profit rose 21% on it, because the company cut traded volumes (bought-in MCC resold at thin margins). That was the main complaint in the last report, and they fixed it.
- **Exports and premium grades up.** Exports reached 72% of sales and premium products 13.5%. Exports make up 56% of the premium sales so far this year.
- **Unit III still not running.** The slides call it "under commissioning", with trial runs done and environment clearance, consent to operate and power hook-up still "in progress". It was due around 25 June 2026 at the May call. A 50 kg CCS sample lot went to customers and approvals with multinational buyers are "in process".
- **Year-one plan for Unit III.** About ₹70 cr of revenue in the first year, at 50-60% utilisation over roughly nine months of production. Phase 2 (the big MCC line) is now "targeted for H1 FY28".
- **Cash freed up.** Receivables halved as one big customer's long credit terms ended. Inventory days rose to 71 from 55, which the slides put down to a smaller cost base after trading was cut.

Business mix & capacity

Domestic vs export: exports 72%, domestic 28% of H1 FY27 revenue (FY26: 63% exports). Plain read: nearly three in four rupees of sales come from abroad.
Capacity use: Pirana (2,000 tonnes a year) at 100% and Dahej (7,200 tonnes) at 95%. There's no room left in the old plants, which is why Unit III Phase 1 (2,800 tonnes a year planned) matters.

2d · Since our last report

Builds on the Q4-2026 report (call 16 May 2026). Prior verdicts: trigger **MAYBE**, management **MAYBE**.

PRIOR READ	WHAT WE SAID THEN	WHAT H1 FY27 SHOWS	MOVEMENT
Trigger	Unit III real but zero sales, slipped twice	Still zero sales, approvals still pending	Slipping
Management	Steady story, every date missed	Fixed trading and receivables, missed Unit III date again	Mixed
Unit III Phase 1 start	"Around 25 June 2026"	Under commissioning in October; clearances in progress	Broken
Low-margin trading	About a quarter of FY26 sales at 4-5% margin	Traded volumes cut; margin up about six points	Improving
Receivables	95 days and rising	47 days	Improving
Phase 2 MCC line	Moved to ~FY28	"Targeted for H1 FY28"	On-track

Checkpoint results: the Q4-2026 report predates the checkpoint box, so the promise rows above are scored instead.
Verdict change: both unchanged. The core business got cleaner, but the plant the whole story rests on missed a third date.

3 · Earning-trigger thesis

Everything still hangs on **Unit III**: CCS, SSG and wood-pulp-based CMC selling at ₹650-700 a kilo against ₹180-300 for plain MCC. Management says the in-house pulp-to-CMC-to-CCS route took eight years to develop and nobody else in India does it that way. Meanwhile the existing business got better this half by dropping thin

trading sales and selling more premium grades abroad. But until Unit III gets its clearances and customers approve the new products, the big step-up is a plan, not a result.

TRIGGER	WHAT MANAGEMENT SAID	EVIDENCE SO FAR	HORIZON	STRENGTH	CHANGE SINCE LAST REPORT
Unit III Phase 1 (CCS, SSG, CMC)	~₹70 cr year one, ₹150-160 cr peak	Trials done, sample lot shipped, no clearances, no sales	Slipped past June 2026; no new date	Unproven	↓ weakening
Premium mix + exports	Premiumisation lifts realisations	Premium 13.5%, exports 72%, margin up	Now	Moderate	↑ improving
Phase 2 MCC line (12,000 t)	Targeted for H1 FY28	Rights money mostly spent; construction on	FY28	Unproven	unchanged
Wood-pulp CMC edge	Distinct in-house process	40-50 trial CMC samples, 50 kg CCS lot	With Unit III	Unproven	unchanged

3b · Trigger check

TRIGGER TYPE	YES/ NO	WHAT WAS SAID (15 OCT 2026, PRESENTATION)
Debt cut	No	Already debt-free.
New business	No	CCS/SSG/CMC not yet selling; approvals "in process".
Margin up	Yes	EBITDA margin 25.11%, "609 bps YoY"; premium mix up from 10.48% to 13.52%; traded volumes cut.
New management	No	None.
New capacity	No	Unit III "under commissioning"; consent to operate "in progress". Not running yet.
Big orders	No	No order book given this time.
Turnaround	No	Not applicable.
Promoter buying	No	Promoter holding steady; nothing new.

Single concrete driver: Unit III's higher-priced CCS, SSG and pulp-based CMC, still waiting on clearances and customer approvals.

3c · Margin bridge

Margin (including other income) rose to about 25% from 19% a year ago and 18% in the March half. The company cut traded volumes, which were low-margin resale, and sold a richer mix of premium grades, mostly to export buyers. Since the trading cut is a choice and the premium grades are repeat products, it should hold unless trading comes back to fill orders (lasting).

4 · Management consistency scorecard

PERIOD	PROMISED	WHAT HAPPENED	VERDICT
May 2025	Unit III Phase 1 live Sept-Oct 2025	Not live	Missed
Aug 2025	Phase 1 by end-Oct 2025; margins to 20-22%	Plant missed; margin now ~25% with other income	Partly
May 2026			

	Phase 1 around 25 June 2026; margin up 2-3 points once premium ramps	Plant still under commissioning in October; margin rose anyway via trading cut	Missed (plant)
May 2026	Phase 2 ~FY28	Now "H1 FY28"	Too-early
H1 FY27 delivery	Cleaner growth, less trading	Profit up 72%, receivables halved	Delivered

Narrative drift: The plan hasn't changed in three calls and a set of slides: Unit III, premium grades, exports. What keeps changing is the date. June 2026 was the third Unit III target and it's gone too, with the slides now naming the missing clearances (environment clearance, consent to operate, power) rather than a new date. On the other side, they acted on the two worries from May, trading and slow-paying customers, and the numbers show it. Talking to investors only twice a year, and not at all this half, still means the Unit III delay gets explained in slides, not in answers.

5 · Bottom line

Durable earning trigger? → MAYBE vs last quarter: unchanged

What moved: the base business is healthier, with higher margins, more premium and export sales, and cash coming in faster. But the trigger is Unit III, and it still hasn't sold a kilo or received its operating consent. A YES needs the plant running and a multinational buyer approving CCS.

Management consistent? → MAYBE vs last quarter: unchanged

Two things pull in opposite directions. They fixed trading and receivables, which they were asked about in May. They also missed the Unit III date for the third time without giving a fresh one. That's leaning toward NO on timelines and toward YES on running the business. If Unit III misses the next half too, this becomes a NO.

6 · Checkpoints for next results (H2 FY27)

- Unit III gets consent to operate and books its first commercial sales
- A multinational customer approves the new CCS grade
- Margin holds near this half's level with trading kept low
