Tatva Chintan Pharma Chem Ltd

Concall Tracker · Q2 FY27 (quarter ended 30 Sep 2026) · filed under Q2-2027 · builds on the Q1-2027 report (call 17 Jul 2026) · Screener: TATVA · report date 7 Nov 2026

What the company does: A Gujarat specialty-chemicals maker. It's the world's second-largest maker of Structure Directing Agents (SDA, the templating chemicals used to make zeolites for car-exhaust catalysts), and also sells Phase Transfer Catalysts (PTC, chemicals that speed up industrial reactions), Pharma-Agro-Specialty intermediates (PASC) and Electrolyte Salts (ESS, for batteries). Most of it is exported.

No concall transcript for this quarter

Tatva scheduled its Q2 FY27 earnings call for 19 Oct 2026, 5 pm, right after results. The same afternoon it filed a notice with BSE and NSE **cancelling the call "due to unforeseen circumstances"**. As of this report (7 Nov 2026) it hasn't been rescheduled and no transcript exists. The owner approved building this report without one, so the Q2 read below is a **web deep-dive** on: the results filing and board outcome (19 Oct), the investor presentation and its corrected version (19 Oct), the cancellation notice, and news coverage of the results (Angel One, Arthneeti). Older quarters are carried forward from the Q1-2027 report, which read twelve calls from Q2 FY24 to Q1 FY27.

1 · Snapshot

METRIC	VALUE	PLAIN READ
Market cap	~₹4,550 cr	What the whole company is worth on the market (19 Oct 2026).
P/E	~87x	Investors pay about 87 rupees for each rupee of yearly profit. Very rich, a lot of growth is priced in.
Q2 FY27 revenue	₹217 cr	Sales for the quarter, up 76% on a year ago and 30% on Q1. Its biggest quarter ever.
Q2 FY27 EBITDA / margin	₹41 cr / 19%	Operating profit (before interest, tax and depreciation) up 83%. Margin flat on Q1, still under the 20-22% guided for the year.
Q2 FY27 net profit	₹21.5 cr	Take-home profit more than doubled from ₹9.9 cr a year ago.
H1 FY27 revenue	₹384 cr	First-half sales up 60%, well ahead of the 25-30% growth guided for the full year.
Short-term borrowings	₹166 cr	Up from ₹115 cr in March 2025. Bigger working capital and the new plant are being funded partly with debt.
Capital work in progress	₹43 cr	Money sunk into plants not yet running, up from ₹23 cr in March. That's the Jolva greenfield moving.

2 · Coverage

PERIOD	SOURCE	STATUS
Q2 FY24 → Q4 FY26 (11 calls)	Earnings-call transcripts	Carried forward from the Q1-2027 report
Q1 FY27 (17 Jul 2026)	Earnings-call transcript	Prior boundary call, carried forward
Q2 FY27 (19 Oct 2026) ★	Results, investor presentation, exchange filings, news	**Call cancelled, no transcript.** Read from filings in full

★ Latest update highlights · Q2 FY27 (results and presentation, 19 Oct 2026)

- **Record quarter.** Revenue ₹217 cr, up 76% on the year. Profit more than doubled to ₹21.5 cr. The chairman's letter calls it the highest quarterly turnover in the company's history.

- **SDA leads again.** SDA was 45% of sales (41% in FY26), PASC 30%, PTC 21%, ESS 3%. The letter says Euro 7 emission rules are "already translating into a meaningful contribution" to SDA sales.
- **Margin stuck at 19%.** Solvent shortages pushed some solvent prices up 60-100%, and freight on some US and Europe routes more than doubled. Management says both are reversing and should normalise within Q3, after which margin should "resume its healthy trajectory".
- **New lines.** Recently launched agro products are selling, the first pharma product has started contributing, hybrid-battery electrolyte is "progressing towards commercialisation", and all five semiconductor chemicals are moving through customer qualification.
- **Tone.** Upbeat in writing ("landmark" quarter, revenue growth expected to continue at a similar pace), but the company pulled out of facing analysts live on results day.

Business mix & capacity

Domestic vs export: not broken out in the Q2 filings. Historically about 60-70% of sales are exports.
Capacity use: not updated this quarter. At Q1 the Dahej site was called "nearly saturated". The new Jolva greenfield plant is "progressing in line with the planned schedule" (Q1 said 18-21 months to operations from July 2026), and capital work in progress almost doubled in six months.

2d · Since our last report

Builds on the Q1-2027 report (call 17 Jul 2026). Prior verdicts: trigger **YES**, management **MAYBE**.

PRIOR READ	WHAT WE SAID THEN	WHAT Q2 SHOWS	MOVEMENT
Trigger	Euro 7 SDA cycle firing, all four segments growing	Record sales, SDA share up to 45%, Euro 7 cited again	Confirmed
Management	Steady story, FY26 delivered, long history of slipping dates	Revenue far ahead of guide, margin below it, call cancelled	Mixed
FY27 growth guide	25-30% revenue growth	H1 up 60%	On-track (ahead)
FY27 margin guide	20-22% EBITDA margin	19% in both quarters; blamed on solvents and freight	Slipping
Electrolyte salts	8-10% of FY27 sales; hybrid-battery supply from Oct/Nov	3% of Q2 sales; hybrid "progressing towards commercialisation"	Slipping
Jolva greenfield	Ground broken 20 Jul, 18-21 months to run	"In line with schedule"; work in progress nearly doubled	On-track

Checkpoint results: the Q1-2027 report predates the checkpoint box, so the promise rows above are scored instead.
Verdict change: both unchanged. The trigger got stronger in the numbers. Management stays MAYBE: the top line beat its own guide, but the margin band is missed so far, electrolyte is behind, and cancelling the call means nobody could ask about any of it.

3 · Earning-trigger thesis

After a two-year slump, earnings are coming back on several engines. The proven one is **SDA for Euro 7 car-exhaust catalysts**, which grew its share of sales again this quarter. Behind it, **PASC** is turning from first orders into repeat agro and pharma sales. **Electrolyte salts** for hybrid batteries and **semiconductor chemicals** are longer bets. The **Jolva plant** adds room once Dahej fills up.

TRIGGER	WHAT MANAGEMENT SAID	EVIDENCE SO FAR	HORIZON	STRENGTH	

					CHANGE SINCE LAST REPORT
SDA + Euro 7	Euro 7 already giving meaningful sales	SDA 45% of a record quarter	Now → 3-5 yrs	Strong	↑ improving
PASC agro + pharma	New agro products doing well, pharma product started	30% of sales, first pharma revenue	FY27-FY29	Moderate	unchanged
Electrolyte salts	Hybrid-battery use nearing commercial supply	Only 3% of sales, flat on Q1	FY27-FY28	Weak	↓ weakening
Semiconductor chemicals	Five products in qualification	No revenue; no date given	CY2028+	Unproven	unchanged
Jolva greenfield	On schedule	Work in progress ₹23 cr → ₹43 cr	Live ~FY28	Moderate	unchanged

3b · Trigger check

TRIGGER TYPE	YES/ NO	WHAT WAS SAID (19 OCT 2026, PRESENTATION)
Debt cut	No	Short-term debt rose.
New business	Yes	"Recently commercialised agro products performing well and our pharma product beginning to contribute."
Margin up	No	Margin flat at 19%; solvent and freight costs held it back.
New management	No	None disclosed.
New capacity	Yes	"Our new greenfield project is progressing in line with the planned schedule."
Big orders	No	No order book given.
Turnaround	No	Recovery already happened in FY26; not claimed as new.
Promoter buying	No	Nothing filed.

Single concrete driver: Euro 7 emission rules lifting demand for its SDA catalyst chemicals, now nearly half of a record quarter's sales.

3c · Margin bridge

Margin is 19%, about a point better than a year ago but flat on Q1 and below the 20-22% guided. Staff and other costs fell as a share of sales, which should have pushed it up. Instead solvent prices jumped 60-100% on short supply and freight on some US and Europe routes more than doubled. Management calls both temporary and expects them to unwind in Q3 (one-off).

4 · Management consistency scorecard

PERIOD	PROMISED	WHAT HAPPENED	VERDICT
FY25 guide (from Q2 FY24)	Big revenue growth, cut every quarter	Revenue fell; a loss quarter	Missed
FY26 guide	~25% growth, ~20% margin	Delivered almost exactly	Delivered
FY27 revenue (Q1 FY27)	25-30% growth	H1 up 60%	Delivered so far
FY27 margin (Q1 FY27)	20-22%	19% in Q1 and Q2	Partly

Electrolyte salts (Q4 FY26, Q1 FY27)	8-10% of sales, hybrid supply from Oct/Nov	3% of sales, hybrid still "progressing"	Too-early, slipping
Semiconductor (since 2025)	Commercial by 2027, later end-2028	Still qualifying; no new date	Too-early
Investor access	Earnings call on 19 Oct	Cancelled same day, not rescheduled	Missed

Narrative drift: The story hasn't moved: SDA and Euro 7 first, PASC behind it, batteries and chips as long bets. What's new is that sales are running well ahead of their own guide. The weak spots are the same as before: dates on the newer lines slide, and the margin promise depends on costs they don't control. Pulling the call on results day is a first for this company in the period read. It reads badly because it came in the one quarter with an awkward margin story to explain.

5 · Bottom line

Durable earning trigger? → YES vs last quarter: unchanged

The numbers moved it further in the same direction. A record quarter, SDA growing its share on Euro 7 demand, and agro and pharma products adding real sales. The catch is valuation and margin: at about 87 times profit, the market wants margins back in the 20s, and electrolyte salts are well behind what was promised for this year.

Management consistent? → MAYBE vs last quarter: unchanged

Nothing big moved it. Revenue is beating guidance by a wide margin, which is a real plus after the FY25 mess. But the margin band is missed two quarters running, electrolyte is lagging, and cancelling the earnings call on results day with no reason given takes away the one chance investors had to test those claims. Q3 has to show margin recovery and a normal call.

6 · Checkpoints for next quarter

- EBITDA margin gets back into the guided 20-22% band as solvent and freight costs ease
- Hybrid-battery electrolyte supply starts commercially and the ESS share rises
- The company holds its Q3 earnings call and files the transcript
