Manaksia Coated Metals & Industries Ltd

Concall tracker, filed under Q2 2027 | NSE: MANAKCOAT | report built from 10 earnings calls, Aug 2024 to Nov 2026

1. Snapshot

Manaksia Coated Metals makes coated steel sheets at a plant in Kutch, Gujarat, close to Kandla and Mundra ports: pre-painted (colour-coated) steel and Alu-Zinc coated steel used for roofing, wall panels, ceilings and appliance bodies. It buys steel coil, coats and paints it, and sells mostly to manufacturers (OEMs) in Europe, plus a growing Indian trade.

Number	Value	Plain read
Market value	₹1,765 cr	A small company; priced at about 39 times its last-year profit, which assumes the new line works.
Sales, last 12 months	₹995 cr	Close to four times what it sold in FY20; growth picked up again this half.
Net profit, last 12 months	₹46 cr	Small against sales: about ₹5 of profit per ₹100 sold. Coated steel is a thin-margin trade.
Operating margin	11% in Sep 2026 quarter	Up from 6-7% a couple of years ago, thanks to the Alu-Zinc upgrade and cheaper bulk shipping.
Borrowings	₹185 cr (Sep 2026)	Before the ₹150 cr share sale (QIP) closed in November, which management says will cut debt over the next couple of quarters.

2. Concall coverage

Quarter	Call date	Read?
Q1 FY25 to Q4 FY26 (8 calls)	Aug 2024 to May 2026	Skimmed for promises and timelines
Q1 FY27	Jul 2026	Read for guidance
Q2 FY27	early Nov 2026 (transcript filed on NSE 4 Nov 2026; not yet on Screener)	Read in full ★

10 calls over about two and a half years. Also read: the 5 Nov 2026 press releases on the QIP and a new European export MoU.

Latest concall highlights, Q2 FY27 (Nov 2026)

- Record quarter: income ₹322 cr, up 44% on last year, and profit ₹18.7 cr, up a third on the previous quarter. Price per ton rose about 8%, so this isn't only more volume.
- Operating profit per ton rose to ₹11,536 from ₹10,411, helped by the upgraded Alu-Zinc line, a switch to cheaper break-bulk ships for Europe, and costlier products.
- Order book ₹525 cr, of which ₹420 cr is exports to be shipped over about five months. That's roughly half a year of sales already booked.
- Second colour-coating line in final trials, to start within Q3 FY27, taking painted-steel capacity from 86,000 to 2,36,000 tons a year. A 7 MW solar plant also starts in Q3.
- Guidance: FY27 sales up 35-55% on FY26; FY28 volume of 1.75-2 lakh tons (vs just over 1 lakh in FY26); FY29 goal to triple output, revenue and operating profit.

Business mix & capacity. Exports about 71% of revenue in Q2 FY27 (68% in FY26), mostly Europe, with new markets in Latvia, Brazil, Jamaica and Somalia. Plain read: this is an export business that depends on EU steel-import quotas. Capacity: the single painting line was the bottleneck; spare Alu-Zinc capacity was sold unpainted. The new line lifts painted capacity about 2.7 times, ramping over 60-90 days.

3. Earning trigger thesis

The earnings driver is capacity. The Alu-Zinc upgrade (done around Dec 2025 to Jan 2026) already lifted margins; the second colour-coating line, about to start, nearly triples painted-steel capacity, and European customers keep placing repeat orders. Management says a large part of its FY29 "triple it" goal comes from this one line. The catch is that timelines have slipped several times and the export market sits behind EU quotas that just got tighter.

Trigger	What management said	Evidence so far	Horizon	Strength
Alu-Zinc upgrade	Major margin gain once upgraded	Margin 11% vs 6-7%; Alu-Zinc exports jumped	Now	Strong: in the numbers
Second colour-coating line	Start Q3 FY27; ~50,000 tons a quarter at steady state	Final trials; slipped from Q4 FY26 to Q3 FY27	Q3 FY27 to FY28	Moderate: not running yet
Export orders	Order book ₹525 cr; ₹210 cr European MoU	Record export volumes in H1 FY27	Next 5 months	Moderate: EU quota risk

3b. Trigger check

Trigger type	Yes/ No	What was said (date)
Debt cut	Yes	The QIP will cut debt: "for the next couple of quarters, you will see reduction in the debt" (Nov 2026).
New business	Yes	Alu-Zinc exports up more than five times on the quarter, with entry into South and Central America (Nov 2026).
Margin up	Yes	Operating profit per ton up on the Alu-Zinc upgrade, bulk shipping and premium products (Nov 2026).
New management	No	Same team.
New capacity	Yes	Second colour-coating line "commissioning targeted within Q3 FY '27", plus a 7 MW solar plant (Nov 2026).
Big orders	Yes	Order book ₹525 cr, ₹420 cr exports over five months (Nov 2026); ₹210 cr European MoU (5 Nov 2026 release).
Turnaround	No	Not described as one.
Promoter buying	No	Not mentioned; the QIP dilutes promoters.

Single concrete driver: the second colour-coating line at Kutch, which nearly triples painted-steel capacity, on top of the upgraded Alu-Zinc line that already lifted margins.

3c. Margin bridge

Operating margin is about 11% now against about 12% a year ago (an unusually good quarter) and 6-7% two years ago. The step up came from the Alu-Zinc technology upgrade, moving European shipments from containers to break-bulk vessels, and selling more premium thin and custom-colour sheet. Management expects margin per ton to hold or rise as the new line adds more painted product (lasting).

4. Management consistency scorecard

Period	What was promised	What happened	Verdict
Jul 2025	Alu-Zinc upgrade by end of Q2 FY26	Line started around Dec 2025 to Jan 2026, after a month-long shutdown	Partly (late)
Jul 2025	Second colour-coating line by end of Q4 FY26	Moved to early FY27, then July 2026, then Q2, now Q3 FY27	Missed (slipping)

Jul 2025	Keep up the Q1 FY26 run-rate through the year	Q3 and Q4 FY26 were weaker (shutdown, Middle East costs)	Missed
May 2026	New capacities add to revenue and margin from H1 FY27	Record H1 FY27 sales and profit, though from Alu-Zinc, not the new line	Delivered
Nov 2026	FY27 sales up 35-55%; FY29 triple	H1 FY27 up 22%	Too early

Narrative drift: the story itself hasn't changed in two years: upgrade Alu-Zinc, add a second painting line, push exports, then a bigger FY29 plan. What keeps changing is the date. Each call moves the second line by a quarter or so. Tone is confident and a bit promotional; it brushed off the EU quota cut.

5. Bottom line

Durable earning trigger? YES

The Alu-Zinc upgrade already shows in margins and the second line is weeks from starting, backed by a large export order book. Real, but it still has to sell nearly three times the painted volume.

Management consistent? MAYBE

Plans stay steady and money has been raised to fund them, but every project date has slipped at least once.

6. Checkpoints for next quarter

- Second colour-coating line starts production within Q3 FY27
- Export volumes hold up despite the cut EU quota
- Debt falls after the November QIP money comes in
