Lumax Auto Technologies Ltd

Concall Tracker: reading the earnings calls to judge the earning trigger and management consistency
Report date: 6 Nov 2026 | Quarter: Q2 FY27 (Jul-Sep 2026) | Screener: LUMAXTECH | BSE 532796 | Builds on the Q1-2027 report

1. Snapshot

What it does: Lumax makes auto parts for vehicle companies (Mahindra, Maruti Suzuki, Bajaj, Tata, Honda two-wheelers), plus a spare-parts business. The plan is to earn more per vehicle by moving into higher-tech parts through joint ventures and tie-ups: plastic interiors and cockpits, gear shifters, CNG fuel kits, sensors, antennas, telematics and now car electronics.

Number	Value	Plain read
Market value	₹15,876 cr	What the stock market values the whole company at (Screener snapshot).
Revenue, Q2 FY27	₹1,556 cr	Sales for Jul-Sep 2026, up 35% on last year and 14% on Q1. First quarter ever above ₹1,500 cr.
Operating profit (EBITDA), Q2	₹228 cr, 14.7% margin	Profit before interest, tax and depreciation, up 34%. Margin slipped from 15.1% in Q1 because cost pass-throughs inflate sales without adding profit.
Net profit, Q2	₹117 cr	Up 50% on last year. Profit is still growing faster than sales.
Half-year (H1 FY27)	Rev ₹2,919 cr, EBITDA ₹434 cr, PAT ₹215 cr	Sales up 34%, profit up 64% for Apr-Sep. Margin 14.9%, up 0.9 points on last year.
Order book	₹1,879 cr	Yearly sales from business already won, up from ₹1,600 cr in Q1. Only ~14% lands in FY27; ~59% in FY28, ~27% in FY29.
Debt to equity	0.26	Long-term debt ₹442 cr against ₹400 cr of free cash. Down from 0.32 last quarter. Comfortable.
P/E	56.4	The share price is about 56 times a year's profit, near its 52-week high. Expensive.

2. Concall coverage

Quarter	Call date	How it was read
Q1 FY24 to Q4 FY26 (12 calls)	Aug 2023 - Jun 2026	Carried forward from earlier reports
Q1 FY27 (prior boundary)	11 Aug 2026	Read in the Q1-2027 report
Q2 FY27	27 Oct 2026	Newly deep-read in full ★

Only the Q2 FY27 call was read in full this time. The backstory comes from the earlier reports, which together span about three years of calls.

★ Latest concall highlights: Q2 FY27 (call held 27 Oct 2026)

- **Another big quarter.** Revenue ₹1,556 cr (+35%), EBITDA ₹228 cr (+34%), profit ₹117 cr (+50%). Industry production grew 19%, helped by lower GST and a low base, so Lumax is still beating the market but the market helped.
- **Guidance raised.** FY27 revenue growth now 20-25%, roughly ₹6,000 cr for the year. The CFO said the start-of-year plan implied only 12-14% for FY27. H2 growth expected at 15-20% as the base gets tougher. FY28 target of ~₹1,000 cr EBITDA reaffirmed. The FY31 revenue goal is now "around ₹11,000 cr" (it was ~₹10,000 cr), and they now think 20% a year is doable without acquisitions.
- **New plant and new product.** Board approved a ~₹150 cr Manesar electronics plant for body control modules (the car's electronic "switchboard"), in two phases from Q3 FY28, ~₹500 cr peak sales. The module started supply in July with a ₹250 cr order book behind it, built with an unnamed Japanese parts maker. Greenfuel's Nashik plant began supplying Mahindra this quarter, and Maruti placed firm orders for its locally made CNG tubes.
- **Soft spots.** Margin dipped to 14.7% on input-cost pass-through (a lag of about a quarter). Spare parts grew only 9% in H1 (11% in Q2). Sales to sister company Lumax Industries were flat because it took one product in-house. H1 capex was just ₹60 cr against a ₹300 cr full-year plan.
- **Tone:** confident. Raised the near-term number, kept the long-term one, and talked of moving margin up another 1-2 points toward 17-18% over a few years.

Business mix & capacity

India vs exports: not broken out. Exports are small and mostly indirect through vehicle makers, so this is an India-demand story.

By division (H1 FY27): advanced plastics ₹1,655 cr (+45%), structures and controls ₹476 cr (+24%), spare parts ₹234 cr (+9%), CNG kits ₹220 cr (+30%), mechatronics ₹177 cr (+45%). Plastics is well over half of sales; mechatronics is still small.

Capacity: no group utilisation figure given. New Chakan interiors plant for Mahindra is in start-up, launches Dec-Jan. New plants in mechatronics, plastics and CNG due to start production in H2 FY27, plus the new Manesar electronics plant from Q3 FY28.

Since our last report (builds on the Q1-2027 report, call of 11 Aug 2026)
Prior verdicts: earning trigger **YES**, management consistent **YES**.

Prior read	What we said then	What the new call shows	Movement
Trigger: YES	More tech content per vehicle, already in the numbers	Sales +35%, order book up to ₹1,879 cr, new electronics plant approved	Confirmed
Consistency: YES	Held guidance despite a hot Q1, honest about one-offs	Raised FY27 guidance after delivering; called out the margin dip and the flat sister-company sales themselves	Confirmed
Margin ~15% for FY27	15.1% in Q1	14.7% in Q2, 14.9% for H1; full-year margin guidance held	On-track
Mechatronics growth leg	+56% in Q1, body control module launched	+45% H1; ₹150 cr plant approved; FY31 goal now ₹800-1,000 cr	Improving
CNG kits (Greenfuel)	Mahindra won, Nashik plant coming	Nashik live; firm Maruti orders; H1 +30%	Improving
Spare-parts growth	Only +6% in Q1	+11% in Q2, +9% in H1; still short of the 15-20% aim	Slipping
FY27 capex ~₹300 cr	₹23 cr spent in Q1	₹60 cr in H1; ₹300 cr still guided, so H2 is heavy	Slipping
Dividend payout	Cut in FY26, not discussed	Not discussed again	Unresolved

Verdict change: both verdicts unchanged. The new call added proof, not new promises, and the guidance raise came after the delivery rather than before it.

3. Earning Trigger thesis ★

Lumax grows by putting more and pricier parts into each vehicle, not by waiting for car sales. Content today is about ₹70,000-75,000 per passenger car and ₹20,000-22,000 per two-wheeler, and management expects that to rise 10-15% as electronics come in. That's playing out: two straight quarters of 30%+ growth, a bigger order book that's ~85% new business, and the first in-house electronics product with a dedicated plant behind it. The aim is ~₹11,000 cr of revenue by FY31.

Trigger	What management said	Evidence so far	Horizon	Strength	Change since last report
More content per vehicle	20% a year from FY25 to FY31, ~₹11,000 cr by FY31	H1 +34%; order book ₹1,879 cr	To FY31	Strong	↑ guidance raised for FY27
Mechatronics (sensors, telematics, body control modules)	Fastest-growing arm, ₹800-1,000 cr by FY31	H1 +45%; order book ₹512 cr; ₹150 cr plant approved	Medium-long	Strong	↑ plant approved, but long-term range widened down
CNG kits (Greenfuel)	Local CNG tubes as a growth driver	H1 +30%; Nashik live; Maruti orders	Medium	Moderate-strong	↑ new plant and customer
Margin expansion	~15% FY27, ~₹1,000 cr EBITDA FY28, 17-18% over a few years	14.9% in H1	To FY28	Moderate	Unchanged, Q2 dip explained by pass-through
Spare parts	15-20% growth over 3-5 years	H1 +9%	3-5 years	Weak for now	Unchanged, goal pushed to a longer horizon

4. Management Consistency scorecard

Period	What was promised	What actually happened	Verdict
FY25-26 (earlier reports)	~20% growth, then raised in FY26	FY25 +29%, FY26 +34%	Delivered
Jun-Aug 2026	~20% growth over FY27-28, slower H2	H1 +34%; FY27 guidance raised to 20-25%	Delivered so far
Jun-Aug 2026	Margin ~15% for FY27	14.9% in H1	On track
Aug 2026	Body control module launched; Manesar plant coming	₹250 cr order book; ₹150 cr plant approved, starts Q3 FY28	Delivered
Aug 2026	Mahindra CNG supplies from Nashik	Production started in Q3 FY27	Delivered
Jun-Aug 2026	Spare parts back to double digits	+9% in H1	Missed
Jun 2026	FY27 capex ~₹300 cr	₹60 cr in H1	Too early
FY26	Exit the weak JV	JOPP JV dissolved last quarter by mutual consent	Delivered

Narrative drift: very little. It's the same "more tech per vehicle" story, now with a dated plant behind the electronics push. Two small things worth watching. The CFO now says the start-of-year FY27 plan was really 12-14%, which makes the raise look bigger than what the last call said (~20% a year). And the mechatronics FY31 goal is now quoted as a ₹800-1,000 cr range. Neither is a broken promise. Spare parts keep missing, and the target there has quietly moved to a 3-5 year horizon.

5. Bottom line: two verdicts

Durable earning trigger? → YES (vs last quarter: unchanged)

Nothing weakened it, and two things firmed it up: a dedicated electronics plant and a working CNG plant for Mahindra. The order book is bigger and mostly new business. The honest caveats: a lot of this year's growth came from a hot industry and a low base, H2 will be slower, and the stock at about 56 times earnings already prices in a good deal of it.

Management consistent? → YES (vs last quarter: unchanged)

They raised guidance only after two quarters of delivery, explained the margin dip plainly, and kept the long-term numbers steady. The weak spots are the same as before: spare parts keeps underperforming, capex is running behind plan, and the dividend cut still hasn't been addressed.
