Corona Remedies Ltd

Concall-Tracker report | ticker CORONA | Q2-2027 update (continues the Q1-2027 report) | prepared 06 Nov 2026 | based on earnings-call transcripts (Screener.in)

1. Snapshot

What the company does: Corona Remedies makes finished medicines (tablets, capsules, injections, gels) and sells them under its own brand names, mostly to specialist doctors in India. Its main areas are women's health (hormones and fertility included), heart-and-diabetes, pain and urology. About three-quarters of sales are long-term "chronic" medicines that patients keep refilling. It listed in December 2025.

Number	Value	Plain-English read
Market value (Screener, Nov 2026)	₹14,917 cr	What the whole company is worth on the stock market.
Price-to-earnings (P/E)	~68	Buyers pay about ₹68 for each ₹1 of yearly profit. That's expensive and assumes fast growth keeps going.
Q2 FY27 sales (Jul-Sep 2026)	₹441 cr, up 22.2%	Sales grew more than a fifth for a second straight quarter, well above the company's own 15% target.
Q2 FY27 operating profit (EBITDA)	₹96 cr, up 22.3%; margin 21.7%	Core profit grew in line with sales. About ₹22 earned per ₹100 of sales, flat on last year. The raw-material squeeze flagged in August didn't show up.
Q2 FY27 net profit	₹60 cr, up 15.3%	Bottom line grew slower than sales because depreciation jumped (the new hormone plant and bought brands are now being written off).
H1 FY27 net profit (Apr-Sep)	₹120 cr, up 22.2%	For the half year, profit is still above the 20% growth guidance.
Return on capital (ROCE, H1)	49.8% (as stated by management)	Earns very high returns on the money tied up in the business. Screener's trailing figure is ~33%.

2. Concall coverage

Period	Call date	How it was used
Q2 FY26 → Q4 FY26 (3 calls)	5 Jan, 3 Feb, 12 May 2026	Carried forward from earlier reports
Q1 FY27 (prior report's boundary)	3 Aug 2026	Carried forward from the Q1-2027 report
Q2 FY27	2 Nov 2026	Newly deep-read in full ★

Only the new Q2 FY27 call was read in full this quarter. The backstory comes from the Q1-2027 report. Corona now has five calls on record, all within about ten months, so the track record is still short.

★ Latest concall highlights: Q2 FY27 (call held 2 Nov 2026)

- **Fifth strong quarter in a row.** Sales up 22.2%, India sales up 22.9% while the Indian drug market grew about 12%. Without the bought Wokadine brand, growth was still 21.5%. Chronic medicines grew ~29% against ~15% for that part of the market. The growth is its own brands, not acquisitions.
- **Profit growth slowed on paper.** Net profit rose 15.3%, below sales growth, because depreciation went up from ₹9 cr to ₹15 cr a quarter as the new hormone plant and acquired brands hit the books. Operating margin held flat at 21.7%. This is an accounting drag, not a business problem.
- **Guidance reframed, not raised.** Management clarified the "15% sales growth" target was really "1.5 times the Indian drug market." With that market now growing 10-13%, the formula points to upside, but they refused to put a higher number on it. Profit guidance stays at 20%.
- **Side bets got trimmed again.** The first-year semaglutide (weight-loss drug) market estimate fell to ₹1,200-1,400 cr from ₹1,500-1,800 cr in August. Wokadine integration is "a little slower than expected" and its 25% growth target now runs over three to four years instead of three.
- **Tone:** calm and confident on the core business, openly hunting acquisitions to enter five new therapy areas (kidney, mind/nerves, gut, spine and joints).

Business mix & capacity (quick facts)

Domestic vs exports (Q2 FY27): India ~97% / international ~3% (exports ₹12.6 cr in Q2, ₹25.3 cr in H1). Almost purely an Indian business. Management expects ₹60-65 cr of exports for FY27, which needs a much bigger second half, and says international stays below 10% of sales even after two to three years.

Capacity: no utilisation figure given. The new hormone plant began commercial production on 30 Jun 2026 and is just starting to fill. The field force is 3,111 medical reps, and no new hiring is planned until FY28, so existing reps have to carry the growth.

★ Since our last report

Builds on the Q1-2027 report (boundary call 3 Aug 2026). Prior verdicts: **Trigger YES · Consistency YES** (short-history caveat).

Prior read	What we said then	What the new call shows	Movement
Trigger: branded engine outgrowing the market	Q1 sales +21.9%, profit +30%	Q2 sales +22.2%, India +22.9% vs market ~12%; 33 "engine brands" (~79% of India sales) growing ~22%	Confirmed
Consistency	Guidance repeated, hormone plant on time	H1 sales +22% and profit +22% against 15%/ 20% guidance; story unchanged	On-track
Raw-material margin hit of ~1 point from Q2	Warned in August	Margin flat at 21.7% year on year; no hit visible	Better than feared
Wokadine +25% a year	Q1 dip during supply-chain shift	"Base sales maintained"; integration slower; target stretched to 3-4 years	Slipping
Semaglutide	Market ₹1,500-1,800 cr, aim top 10	Already top 10, but market estimate cut to ₹1,200-1,400 cr	Toned down again
Hormone exports	Dossiers ready Nov-Dec 2026, then 12-18 months registration	10-12 dossiers "in advanced stage"; benefits in "2 to 3 years"; Brazil (ANVISA) clearance received	Slightly later
IVF team	"Too early" to judge	46 reps covering ~2,500 fertility doctors; ₹7 lakh sales per rep per month, aiming ₹8-9 lakh by year end	Improving

Verdict change this quarter: both verdicts unchanged. The main engine did exactly what it did last quarter. The extra bets keep getting smaller or later, which matters for the "story" but not for the core numbers.

★ 3. Earning-trigger thesis

The engine is a disciplined branded-medicine business growing roughly twice as fast as the Indian drug market. Over three years it has grown 1.9 times the market, with volume growth 3.3 times the market's. It's gaining share with specialist doctors in chronic areas, pushing prices a bit harder than before (price growth ~8.9% vs a historic ~5%) and launching new products. The ~400 reps hired in late FY26 are now carrying a bigger book with no new hiring planned, so costs should grow slower than sales. The new hormone plant adds a domestic and later export leg. Q2 FY27 shows the engine still running; only the depreciation line slowed net profit.

Trigger	What management said	Evidence so far	Horizon	Strength	Change since last report
Core branded engine	Grow 1.5 times the drug market; 20% profit growth	Two quarters of ~22% sales growth; rank 26 in India, 14 in its covered market	Ongoing	Strong	Unchanged, still beating
Costs growing slower than sales	No new reps until FY28; margins to improve over years (no number)	H1 EBITDA +27.5% vs sales +22%; Q2 margin flat	1-3 yrs	Moderate	Unchanged
Hormone plant + La Chandra API stake	India first, exports in 2-3 years	Plant running; depreciation now in P&L	2-3 yrs	Moderate	↓ export timing vaguer
IVF team + new therapies via M&A	Five new therapy areas; "evaluating proposals"	IVF productivity rising; no deal yet	1-3 yrs	Moderate	↑ IVF early numbers
Semaglutide	Top 10 player; focus stays on core brands	Top 10 reached; market smaller than hoped	2-4 yrs	Unproven	↓ estimate cut again
Wokadine brand	25% a year over 3-4 years	Sales held flat while business model changes	2-4 yrs	Unproven	↓ slower

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
Jan-May 2026 (3 calls)	FY26: 15% sales / 20% profit; Noklot launch; IVF team; net cash	All delivered, guidance beaten (from prior reports)	Delivered
May 2026	FY27: 15% organic sales, 20%+ profit	H1: 21.5% organic sales, 22.2% profit	Ahead (half year)
May 2026	Hormone plant live Q1/Q2 FY27	Commercialised 30 Jun 2026	Delivered
May 2026	Wokadine +25% a year	Flat sales; timeline stretched to 3-4 years	Slipping
May → Nov 2026	Semaglutide market ₹2,000-2,500 cr in year one	Cut to ₹1,500-1,800 cr (Aug), then ₹1,200-1,400 cr (Nov)	Toned down twice
Aug 2026	Margins could slip ~1 point on raw materials	Margin flat year on year	Better than warned
Aug 2026	Export dossiers ready Nov-Dec 2026	"Advanced stage"; payoff now "2 to 3 years"	Too early / soft
Nov 2026	FY27 exports ₹60-65 cr; no new reps until FY28	H1 exports only ₹25 cr, so H2 must step up	To check

Narrative drift: the core story hasn't moved in five calls. One small thing worth noting: the "15%" target was recast as "1.5 times the market" just as the market sped up. That's a fair point, but it also lets management avoid raising the number. The add-on bets keep shrinking. Semaglutide has gone from a headline to a footnote, and Wokadine and exports keep sliding out. Management is open about all of it, which is what keeps the consistency read intact. The record is still under a year long and hasn't yet been tested by a bad quarter.

5. Bottom line: two verdicts

Durable earning trigger? → YES

vs last quarter: unchanged

Nothing moved this verdict. Sales again grew about twice as fast as the market, chronic sales grew faster still, and the main brands carry most of the load. The slower net-profit growth is depreciation from the new plant and bought brands, not weaker demand. The side bets (semaglutide, Wokadine, exports) are slower than hoped, but the core case doesn't need them.

Management consistent? → YES

vs last quarter: unchanged

Unchanged. The core guidance is being beaten without hype, the hormone plant came in on time, and the raw-material warning turned out cautious rather than real. The weak spots are the newer bets: the semaglutide estimate has been cut twice and the Wokadine and export timelines keep stretching. Management says so plainly. At a P/E near 68 the market already pays for this consistency. Next checks: whether exports actually hit the FY27 number and whether the margin starts rising as the sales force matures.

Prepared from Corona Remedies' Q2 FY27 earnings-call transcript (2 Nov 2026, Screener.in), the Q1-2027 Concall Tracker report for backstory, and Screener financial snapshot files. Not investment advice.
