

Shadowfax Technologies Ltd

Concall Tracker — earnings-call read on the earning trigger & management consistency | Prepared 11 Jul 2026 | Screener ticker: SHADOWFAX (BSE 544685)

India last-mile logistics

Listed Jan 2026 (recent IPO)

2 concalls available

1. Snapshot

What the business does: Shadowfax is India's largest third-party (outsourced) last-mile delivery company. When you order something online — from an e-commerce site, a direct-to-consumer (D2C) brand, or a 10-minute quick-commerce app — Shadowfax is the network that physically carries the parcel from a warehouse or "dark store" to your doorstep. It runs on a crowdsourced gig-rider model (almost 100% of deliveries are done by per-order gig workers) and owns its sort centres and last-mile hubs. Three business lines: **Express Parcel ~75%** of revenue (intercity e-commerce parcels), **Hyperlocal ~16%** (quick commerce + food delivery), and **Other Logistics Services ~7-8%** (critical/high-value logistics via its CriticalLog acquisition).

Figure (Screener)	Value	Plain-English read
Market value of the company	Rs 13,350 cr	What the whole company is worth on the stock market today.
Share price (52-wk range)	Rs 228 (98.6–242)	The stock has roughly tripled from its low — expectations are already high.
FY26 sales (year to Mar 2026)	Rs 4,080 cr	Total money earned from deliveries in the year, up about 65% from Rs 2,467 cr last year — very fast growth.
FY26 net profit	Rs 115 cr	Actual bottom-line profit — a jump from just Rs 6 cr in FY25. First real profit year after years of losses.
Operating margin (FY26)	~5%	For every Rs 100 of sales it keeps about Rs 5 as operating profit — thin, typical for logistics.
P/E ratio	116	The stock costs 116 years of current profit — a very expensive, priced-for-perfection valuation.
ROCE / ROE	9.7% / 10.7%	Return on money invested is only around 10% — modest for such a high price tag.
Debt	Low	Interest cost is only ~Rs 18 cr on Rs 4,080 cr sales; just raised Rs 1,000 cr fresh equity in the IPO — balance sheet is comfortable.

Note: management quoted marginally higher figures on the call (FY26 revenue "Rs 4,200 cr+", PAT "Rs 112 cr") — small definitional differences; Screener's standardised numbers are used above.

2. Concall coverage

THIN COVERAGE — only 2 calls exist Shadowfax listed on 28 January 2026, so it has held only two earnings calls ever. Both were read in full. A two-call history means the **consistency** read below is necessarily limited — there is no multi-year listed track record to test promises against.

Quarter	Call date	Transcript read?
Q3 FY26 (Oct–Dec 2025) — maiden call	12 Feb 2026	Yes (full)
Q4 FY26 (Jan–Mar 2026) — latest	14 May 2026	Yes (full)

2b. Latest concall highlights — Q4 FY26 (call held 14 May 2026) ★

- **Record quarter, and it beat the festive quarter.** Q4 revenue was ~Rs 1,237 cr, up 74% on last year and 6.7% higher than Q3 — unusual, because Q3 (festive season) is normally the peak. Read: demand stayed strong even in the off-season.
- **Most profitable quarter ever.** Net profit Rs 56 cr (4.5% margin) vs Rs 35 cr in Q3; adjusted operating profit margin rose to 4.7% from 4.3%. Read: it is growing fast *and* getting more profitable at the same time.
- **Full-year FY26 turned the corner:** profit Rs 112–115 cr vs Rs 6 cr the year before — the first time the company has ever made Rs 100 cr+ in a year.
- **Big new customer win:** started delivering for **Amazon Now** (Amazon's quick-commerce service). Also confirmed a large marketplace (previously served by a rival) is now onboarded — revenue benefit to show in coming quarters.
- **New bet announced:** will set up ~100 dark stores in FY27 for "vertical" quick-commerce brands (after piloting 15). Management tone: highly confident/bullish, but candid that heavy investment is capping near-term margins.

2c. Business mix & capacity

Revenue mix: Express Parcel ~75% · Hyperlocal (quick commerce + food) ~16% · Other Logistics ~7-8%. Read: three-quarters of the business is core e-commerce parcel delivery; quick commerce is the fast-growing add-on.

Domestic vs export: Effectively 100% domestic (India last-mile) — no meaningful export revenue. Management does not report a domestic/export split because there is none to speak of.

Network reach / "capacity": Present in ~15,600 of India's ~19,300 pin codes (targeting ~17,000 by FY27, full country by FY28); touch-points grew from 4,200 to 4,700 in six months. A specific % utilization figure was **not disclosed**; management said the "national network is better utilised than the zonal network, which is still sub-optimal" — i.e. plenty of headroom to fill trucks as volumes grow.

3. Earning trigger thesis ★

The core story management keeps repeating is **market-share capture in a consolidating logistics market, dressed up with higher-margin add-on services**. India's e-commerce and quick-commerce volumes are exploding; the 3PL (outsourced logistics) market is consolidating as weaker players drop out; Shadowfax says its share of that 3PL market has jumped to ~28-29% from ~17-18% a year ago. On top of that it is deliberately shifting the mix toward **higher-priced D2C/SME customers** (who pay 15-20% more than big enterprises) and into **new categories** (large/white goods, vertical quick-commerce dark stores). As new pin codes and sort centres fill up, thin margins are meant to widen — management guides ~100-120 basis points (about 1-1.2%) of margin improvement a year to FY28, then a faster jump after that toward "early double-digit" operating margins.

Trigger	What management said	Evidence so far	Time horizon	Strength
3PL market-share gains	Share up to ~28-29% from ~17-18%; weaker rivals losing share	Revenue +65-74%; profit Rs 6cr→Rs 115cr	Now & ongoing	Moderate-Strong — clearly happening, but growth is guided to slow to 27-30%.
High-margin D2C/SME mix (Shadowfax 360)	D2C pays 15-20% more; grew 2.5x in FY26	Mix shift is real; margins rose Q3→Q4	1-3 yrs	Moderate — promising but still a small share of revenue.
Operating leverage / margin expansion	+100-120 bps/yr to FY28, then +200-250 bps/yr	Adj. margin 4.3%→4.7% in one quarter	To FY28+	Unproven-Moderate — early signs good; heavy capex still holding it back.
New categories (large goods, dark stores, Amazon Now)	~100 dark stores in FY27; large-goods 3-4x growth	Just launched; little revenue yet	FY27+	Unproven — genuine optionality but unbuilt.

4. Management consistency scorecard

Period	What was promised (Q3, Feb 2026)	What actually happened (Q4, May 2026)	Verdict
Q3→Q4 growth	Q4 "90-95% of Q3" (seasonally softer)	Q4 actually <i>beat</i> Q3 (+6.7%)	Delivered (beat)
Margin expansion	Margins to keep rising ~1%/yr	Adj. margin 4.3%→4.7% in the quarter	Delivered
Large marketplace / quick-commerce onboarding	Onboarded, revenue "in later quarters"	Amazon Now live; ramp underway	On track
Cut "lost shipment / quality-check" cost	Bring 6.3% down toward 5% long-term	Only 6.1% in Q4 — barely down, still above target	Partly
Capex intensity	Normalise toward 2-2.5% of sales	Still elevated ~4.5%; FY27 guided flat at Rs 180-190 cr	Too-early / drifting higher

Narrative drift: Across the two calls the story has stayed remarkably steady — same trigger (market share + value-added services + D2C), same growth and margin framing, and the headline promises were met or beaten. That is encouraging. The honest limitation is simply **history**: two calls in four months is not enough to know whether management delivers *through* a downturn or when growth slows to its guided 27-30%. The one soft spot is that costs it promised to cut (lost-shipment/quality-check ~6%, capex intensity) have moved slowly, so watch those.

5. Bottom line — two verdicts

Durable earning trigger? → YES (but early)

There is a concrete, live driver — taking share in a consolidating 3PL market while mixing up into higher-priced D2C and new categories — and the numbers are visibly moving with it: revenue up 65-74%, market share roughly doubled, and profit swinging from Rs 6 cr to Rs 115 cr with margins expanding. That is a real trigger playing out, not a promise. The reason it is "YES but early": margins are still thin (~5%), the business only just turned profitable, growth is guided to decelerate sharply to 27-30%, and the stock already prices in a lot at 116x earnings — so the trigger is real but its *durability* through a full cycle is unproven.

Management consistent? → MAYBE (too little history)

Over the only two calls that exist, management delivered or beat what it promised and the narrative did not drift — a good start. But two post-IPO calls in four months is far too short to certify a consistent track record, pre-IPO years were deeply loss-making, and a couple of cost promises (lost-shipment cost, capex normalisation) have slipped. This is a "not enough data yet" MAYBE rather than a mark against them — revisit after 3-4 more quarters.
