

Ather Energy Ltd — Concall Tracker

Electric two-wheeler (e-scooter) maker · Screener ticker **ATHERENERG** · NSE: **ATHERENERG** · BSE: 544397 · Report date 04 Jul 2026

5 transcripts read

May 2025 → May 2026

Post-IPO history only

1. Snapshot

What the business does: Ather Energy designs and sells premium electric scooters in India — its two product lines are the **450** (a sporty "performance" scooter) and **Rizta** (a roomier "family" scooter). It makes money three ways: (1) selling the scooter itself, (2) selling a software add-on called **Pro-Pack** (navigation, safety alerts, ride features) attached to most vehicles, and (3) a growing stream of accessories, warranties, servicing and its own public fast-charging network. It is a pure-play electric company (no petrol/ICE business mixed in) and listed on the stock exchanges on 6 May 2025.

Measure (most recent management-stated figures)	Value	Plain-English read
FY26 units sold	~2.57 lakh	Roughly 257,000 scooters sold in the year to Mar-2026, up about 66% on FY25 — strong volume growth.
Q4 FY26 units (Jan–Mar 2026)	83,000	The single best quarter ever — nearly 80% of a whole year's sales from just two years ago.
FY25 total income	₹2,305 cr	Total sales for FY25 (~₹23 billion), up 29% on the prior year. FY26 revenue is materially higher (Q3 alone was ~₹995 cr).
FY26 EBITDA margin	~ -9% (yr)	Operating profit before interest, tax, depreciation is still <i>negative</i> — the company is not yet profitable — but the loss shrank fast: from -23% in FY25 to about -2% in the Mar-2026 quarter.
Adjusted gross margin FY26	24%	What is left from each rupee of sales after the direct cost of building the scooter, up from 19% a year earlier — the core product is making more money per unit.
Pan-India market share Q4 FY26	18.6%	Almost 1 in 5 electric scooters sold in India is an Ather, up from ~7.5% a year and a half earlier.
Promoter holding (Mar 2026)	40.8%	Promoters own about two-fifths; edged down slightly from 42.1% since Jun-2025. Domestic funds (DII)s rose to ~29% while foreign funds (FIIs) fell to ~17%.

Note: Screener's downloadable P&L / balance-sheet CSVs for this newly-listed company were empty of figures at scrape time, so the numbers above are taken directly from what management stated on the earnings calls. Treat them as management-reported, not independently audited line-items.

2. Concall coverage

Ather listed only in May 2025, so its entire public earnings-call history is short. All **five** transcripts that exist were read, oldest to newest:

Quarter	Call date	Transcript read?
---------	-----------	------------------

Q4 & FY25 (year to Mar-2025)	12 May 2025	Yes — first call after listing
Q1 FY26 (Apr–Jun 2025)	04 Aug 2025	Yes
Q2 & H1 FY26 (Jul–Sep 2025)	11 Nov 2025	Yes
Q3 & 9M FY26 (Oct–Dec 2025)	02 Feb 2026	Yes
Q4 & FY26 (Jan–Mar 2026)	04 May 2026	Yes — latest

Coverage caveat: this spans just **one year of post-IPO calls (five quarters)**. That is enough to see the story clearly, but too short to judge management across a full business cycle. The consistency read below is therefore a *limited, short-history* read — promising, but not yet battle-tested through a downturn.

★ Latest concall highlights — Q4 & FY26 (call of 04 May 2026)

- **Record quarter.** Q4 units hit **83,000** (best ever); full-year FY26 volume up ~66%. Q4 market share 18.6% (up ~1,100 basis points / 11 percentage points year-on-year). *Plain read: sales are still accelerating, not plateauing.*
- **Losses nearly gone at the operating line.** Q4 EBITDA loss narrowed to about **–2%** (a 2,000-basis-point / 20-percentage-point improvement year-on-year); full-year EBITDA margin ~–9%. *Plain read: the business is now within touching distance of operating break-even.*
- **Store network doubled.** From 351 to **700 stores** by Mar-2026, 75% opened with existing dealers. *Plain read: it hit the distribution target it promised at IPO, using partners' capital not its own.*
- **New warning: commodity cost spike.** Management flagged a 40–50% jump in raw-material prices (lithium cells, aluminium, memory chips) and said margins will feel **short-term pressure**; they have taken ~₹4,000 of price hikes in the calendar year and may take more. *Plain read: the one clear near-term headwind — costs, not demand.*
- **Next growth engines on track.** New low-cost **EL platform** to be launched by the FY27 festive season; new **Factory 3.0 (AURIC, Aurangabad)** trial production before end-2026. *Plain read: the pipeline to enter the larger mass-market segment is nearly here.*

Tone: confident and detailed — a "breakthrough year" framing — but noticeably more upfront about commodity-cost risk than in earlier calls.

2b. Business mix & capacity

Domestic vs export: Sales are **almost entirely domestic (India)**. Exports are a small early experiment — Rizta was launched in Nepal and Sri Lanka — and management explicitly calls international expansion a "mid-to-long-term" lever with "not a lot to share" yet, and does not break out an export %. *Plain read: for now, treat this as a ~100% India business.*

Non-vehicle revenue mix: ~14% of revenue (Q3 FY26) now comes from software Pro-Packs, accessories, warranties and service — about half of that is the software Pro-Pack, which attaches to ~91–93% of scooters sold. *Plain read: nearly one rupee in seven is higher-margin non-hardware income, and rising.*

Capacity & utilization: The Hosur plant can make **~35,000 units a month** and has been running at **90–95% utilization** in recent months — i.e. the company is *supply-constrained*, with little headroom left. The new AURIC / Factory 3.0 plant (Phase 1) will add **~42,000 units/month** (trial by end-2026, full capacity

by end-FY27; ultimate planned capacity 10 lakh units). *Plain read: demand currently outruns the factory — the new plant is what unlocks the next leg of growth.*

★ 3. Earning Trigger thesis

The headline driver is simple and has been said the same way on every call: **a new mass-appeal product (Rizta) plus a rapidly widening store network is lifting volumes and market share, while per-unit costs fall and fixed costs stay flat — so each new scooter drops more to the bottom line, driving the business toward profitability.** The next layer is the low-cost **EL platform** and the **AURIC factory**, which together open the larger, cheaper "mass" segment where Ather has no product today.

Trigger	What management said	Evidence so far	Horizon	Strength
Distribution expansion	Peers run 700–800 stores, Ather only ~350; will add stores as new products make them viable.	Delivered: 351 → 700 stores in one year; share rose 7.5% → 18.6%. Middle India share went 4% → 17%.	Playing out now	Strong — promise met, share gains visible.
Rizta ramp-up	New family scooter will broaden the market beyond performance buyers.	Delivered: Rizta now ~3/4 of sales; crossed 2 lakh cumulative units by Q3 FY26.	Playing out now	Strong — the single biggest volume driver.
Operating leverage → break-even	~3/4 of costs are fixed; rising volume + falling unit cost will shrink losses fast.	Delivered: EBITDA margin –36% (FY24) → –23% (FY25) → ~–2% (Q4 FY26). BOM cost ₹1.48L → ₹1.1L.	Playing out now	Strong — margin math working as claimed.
Software / non-vehicle revenue	Pro-Pack & services are high-margin and compound with the installed fleet.	Delivered: attach rate 88% → 93%; non-vehicle revenue up to ~14%.	Playing out + compounding	Strong — high, stable attach rates.
EL platform + AURIC factory	Low-cost platform to enter the ₹1–1.25 lakh mass segment; new plant adds capacity.	On schedule: platform unveiled Aug-2025, launch by FY27 festive; plant trial by end-2026. <i>Not yet in market.</i>	Next 1–2 years	Unproven — plausible and on-time, but no sales yet.

4. Management Consistency scorecard

Period / promise	What was promised	What actually happened	Verdict
FY25 call (May-25)	Distribution is the single biggest growth lever; peers at 700–800 stores, "lots of headroom".	Grew from 351 to 700 stores by Mar-2026, ~80–95 stores added every quarter "like clockwork".	Delivered
FY25 → FY26		EBITDA loss cut from –23% to ~–2% in Q4; adjusted gross margin 19% → 24%.	Delivered

	"FY26 and FY27 will be transformational for the P&L"; operating leverage will cut losses.		
Q1 FY26 (Aug-25)	Rare-earth-magnet supply crunch would cause a limited, one-off hit (~1 week's supply gap).	~₹20–25 cr one-time hit landed in Q2; ban expired October, no material impact from Q3.	Delivered (as flagged)
Q1 FY26	New AURIC / Factory 3.0 plant targeted for go-live "next year".	Slipped 2–3 months on environment clearances (disclosed openly); trial now end-2026. Plan to start EL out of Hosur to protect timeline.	Partly / slight slip
Q2 FY26 (Nov-25)	Can absorb the April-2026 removal of the ₹5,000 PM E-DRIVE subsidy; "no longer a big concern".	Kept raising prices through FY26 with steady demand; subsidy phase-out managed without a volume collapse.	Delivered
All calls	Software attach rates (~88–90%) will hold even as it expands into mass-market, non-South regions.	Attach rate actually rose to 91–93% despite ~4x volume growth.	Delivered / beat

Narrative drift: Strikingly little. Across all five calls the same two-part story — (a) premiumisation / "the upgrading Indian buyer", and (b) R&D-and-software-led cost advantage — is repeated almost word for word, and the sequenced roadmap (Rizta → distribution → EL platform → AURIC factory → eventually motorcycles on a separate "Zenith" platform) has stayed intact and on-schedule. Tone shifted only sensibly: more confident as margins improved, and more candid about commodity-cost risk in the latest call. No story was quietly dropped or replaced.

5. Bottom line — two verdicts

Durable earning trigger? → YES

There is a clear, concrete and still-live driver — a widening store network selling a broad product range (Rizta + 450) with high-margin software attached — and the evidence is unambiguous: market share nearly tripled (7.5% → 18.6%), volumes up ~66% in FY26, and operating losses collapsed from –23% to ~–2% almost exactly as management said they would. The next legs (EL mass-market platform, AURIC factory) are unproven but on schedule. The one genuine risk is a sharp commodity-cost spike now squeezing margins, and the company is still not profitable — but the earning trigger itself is real and playing out.

Management consistent? → YES (short post-IPO history — read with that caveat)

Over the five calls available, management has delivered on essentially every headline promise made at IPO: doubling the store count, sharply cutting losses, holding software attach rates, and managing the rare-earth and subsidy shocks as flagged. The strategic story has not drifted, guidance has been broadly met, and the only miss — a 2–3 month factory delay — was disclosed plainly. The honest limitation is length: this is just **one year / five quarters** of public track record, all during a favourable growth phase, so consistency is not yet tested through a demand downturn. On the evidence that exists, though, the record is clean and the Yes is deserved.

This is an automated reading of Ather Energy's earnings-call transcripts (May 2025 – May 2026) sourced via Screener.in, cross-checked against available snapshot data. All figures are as stated by management on the calls; the company remains loss-making. This is not investment advice — verify against primary filings before any decision.
