

Park Medi World Ltd â€™ Concall Tracker

Do the earnings calls show a durable earning trigger, and has management been consistent about it?

Ticker: PARKHOSPS (NSE/BSE) | Report date: 4 July 2026 | Source: Screener.in earnings-call transcripts

1. Snapshot

What the business does: Park Medi World runs the "Park Hospitals" chain â€™ 16 multi-specialty hospitals with about 3,960 beds spread across North India (Haryana, Punjab, Delhi-NCR, Rajasthan and, newly, Uttar Pradesh). It makes money by treating patients: roughly four-fifths of its billing comes from government health-insurance schemes (mainly central-government CGHS/ECHS) and the rest from private/cash patients. Its model is to buy or build hospitals cheaply (about â€™134-35 lakh per bed, well below peers) and fill the beds. The company listed on the stock market in December 2025.

MARKET VALUE â€™112,733 cr The price tag the market puts on the whole company today â€™ a large-mid-cap.	FY26 REVENUE â€™11,679 cr Total money earned treating patients in the year to Mar-2026 â€™ up 21% on last year.	FY26 NET PROFIT â€™1,274 cr What's left after every cost and tax â€™ up 27%; the best year in its history.
OPERATING MARGIN (EBITDA) 26% 26 paise of operating profit per â€™ of sales, before interest/tax/depreciation â€™ healthy for a hospital.	DEBT â€™ nil (â€™128 cr) Used IPO cash to repay ~â€™1,450 cr of loans â€™ now effectively debt-free; a very safe balance sheet.	P/E RATIO / ROCE 49x / 19% You pay â€™149 per â€™ of yearly profit (rich, expects fast growth); it earns ~19% on capital before tax (decent).

2. Concall coverage

Park Medi World only listed in December 2025, so just **two** earnings-call transcripts exist. This is a very short record â€™ the "management consistency" read below is therefore limited to a single quarter of promise-versus-delivery.

Quarter	Call date	Transcript read?
Q3 & 9M FY26 (Oct-Dec 2025) â€™ maiden call	29 Jan 2026	Yes
Q4 & full-year FY26 (Jan-Mar 2026)	13 May 2026	Yes

Span: about one quarter apart (two calls, both since the IPO). All operations are in India â€™ there is no export/overseas business.

Latest concall highlights â€™ Q4 & FY26 (13 May 2026)

- Record full year, everything up.** FY26 revenue â€™11,679 cr (+21%), operating profit (EBITDA) â€™1,444 cr (+20%, margin 26%), net profit â€™1,274 cr (+27%). Plain read: the company sold more, kept its profitability, and grew profit faster than sales â€™ its best year ever.
- Strongest quarter was the last one.** Q4 revenue â€™1,460 cr (+30%), EBITDA â€™1,127 cr (+44%, margin 28%), net profit â€™1,177 cr (+47%). Plain read: growth is speeding up, not slowing.
- Biggest news â€™ most beds ever added in one year.** Added 610 beds in FY26 (network 3,000 â€™ 3,610), opening a 250-bed hospital in Bathinda (Punjab) and a 360-bed hospital in Agra (its first entry into Uttar Pradesh). After year-end it opened a 350-bed hospital in Panchkula (Apr-2026) and bought a 200-bed Delhi (Narela) hospital out of bankruptcy â€™ taking the live network to 16 hospitals / ~3,960 beds.
- Balance sheet transformed.** Loans cut from â€™1,450 cr to just â€™128 cr using IPO money; net worth doubled to â€™12,022 cr; money owed by patients/schemes (debtor days) cut from 161 to 129 days. Plain read: it is now almost debt-free and collecting cash faster.

- **Runway reaffirmed.** 1,500 more beds already under construction to reach ~5,460 beds by March 2028, funded entirely from its own cash (~â,1500 cr). A government scheme (CGHS) rate hike of 12-15% should add ~5-7.5% benefit from FY27. Tone: highly confident, "the most defining year in our history".

Business mix & capacity (quick facts)

- **Domestic vs export:** 100% domestic (India). No overseas operations â€” footprint is 16 hospitals across 5 North-Indian states. Plain read: this is purely an India growth story.
- **Capacity & utilisation:** ~3,960 operational beds now; full-year occupancy 64.1% (up from ~62%). Plain read: roughly a third of beds are still empty on average, so there is real room to earn more from the beds already built before counting the new ones.
- **Expansion:** 1,500 beds under execution â†’ ~5,460 beds by Mar-2028; longer-term aim to roughly double to ~10,000 beds by FY33. Revenue-per-bed (ARPOB) â,128,000/day, kept deliberately "affordable".

3. Earning trigger thesis

The headline: Park's main earning driver is **rapid, cheap bed addition combined with filling those beds**. It buys distressed/bankrupt hospitals and builds new ones at roughly half the industry's cost per bed, then ramps occupancy (currently only mid-60%) and lifts the share of high-value specialties (heart, cancer, transplants, robotic surgery â€” now ~57% of revenue). Because it repaid almost all its debt with IPO money, the entire ~1,500-bed expansion to 2028 is funded from its own cash. This is a concrete, already-in-motion driver, not a promise.

Trigger	What management said	Evidence so far	Horizon	Strength
Fast bed addition	+610 beds FY26; ~5,460 by Mar-2028; ~10,000 by FY33	610 beds delivered in FY26; Panchkula (350) live; Narela (200) bought; 1,500 more under build	FY27-28 core	Strong â€” beds added on plan and self-funded
Occupancy ramp	New units to reach 75-80%; network climbing	Occupancy 62% â†’ 64.1%; still headroom of ~35%	2-3 yrs	Moderate-Strong â€” clear uptrend but still mid-60s%
Cheap-asset model	~â,134-35 lakh/bed vs peers "more than double"; buy distressed units	Bathinda profit-positive month one; Mohali "36x revenue in 30 months"	Ongoing	Strong â€” the structural cost edge; repeatedly proven
High-value case mix (ARPOB)	Lift via cardiac/onco/transplant/robotics, keep ARPOB "affordable"	ARPOB â,126,200 â†’ â,128,000; high-end mix +316 bps to 57%	Ongoing	Moderate â€” a margin lever, deliberately capped, not a growth engine
CGHS government rate hike	"Biggest beneficiary"; ~5-7.5% net benefit from FY27	Not yet in the numbers; deferred to after Q1 FY27	FY27 (H2)	Unproven â€” real tailwind but zero profit evidence yet

4. Management consistency scorecard

Caveat: only two calls exist (one quarter apart), so there is no multi-year record of promises to test. What can be checked between the January and May calls:

Item	What was promised (Jan call)	What actually happened (May call)	Verdict
FY26 beds	Add 660 beds â†’ ~3,910 (Agra by 15-Feb, Panchkula by early March)	Added 610 â†’ 3,610; Agra on time, Panchkula slipped ~5 weeks to 10-Apr	Partly
Debt	"Debt-free by end of February"		

		Term debt down to ₹128 cr by 31-Mar; "to repay this quarter"	Partly (substantially done)
Margins	Sustain EBITDA 26-27%, net-profit margin 15-17%	FY26 EBITDA 26%, net margin 16% (Q4 even better)	Delivered
ARPOB / occupancy	ARPOB ~₹127,400; occupancy ~65%	ARPOB ₹128,000; occupancy 64.1%	Delivered
CGHS benefit	Book ~5-7.5% from FY27	Reiterated; impact after Q1 FY27	Too early

Narrative drift: For the single quarter that can be checked, management largely did what it said – margins, ARPOB, occupancy and debt reduction all landed in line or slightly ahead, with only one modest timing slip (Panchkula opening a few weeks late, which explains the 660→610 bed gap). The strategy story (cheap beds, occupancy ramp, self-funded expansion) did not change between the two calls; if anything the FY28 bed target was tightened from a vague "5,260-5,460" to a firm 5,460. Encouraging early execution, but the track record is simply too short to call it proven.

5. Bottom line – two verdicts

Durable earning trigger? – YES

There is a clear, concrete, still-live driver: adding beds cheaply and filling them. It is visibly playing out – 610 beds added, revenue up 21%, profit up 27%, occupancy rising, expansion fully funded from internal cash after the debt payoff. The main watch-item is that occupancy is still only mid-60%, so the earnings depend on continuing to fill both old and new beds; but the driver is real and in motion, so this is a genuine Yes.

Management consistent? – MAYBE

Not a criticism – simply too little history. With only two calls, there is just one quarter of promise-versus-delivery to judge, and in that quarter management mostly delivered (margins, ARPOB, occupancy, debt) with one small timing slip on the Panchkula opening. The strategy has stayed steady. But "consistency" is about repeating and delivering over years, and that record does not yet exist. Revisit after another 3-4 quarters; early signs are positive.

Concall-tracker report generated 4 July 2026 from Park Medi World's Q3 FY26 and Q4 FY26 earnings-call transcripts (Screener.in). Figures are as stated by management; guidance items (5,460 beds, CGHS benefit) are targets, not results. This is not investment advice – do your own due diligence.
