

Skipper Limited — Concall Tracker

Ticker: SKIPPER (NSE/BSE 538562) · Sector: Power transmission & distribution (T&D) towers, polymer pipes, EPC · Report date: 04 July 2026

Latest call analysed: **Q4 FY26 / full-year FY26 (results & earnings call, ~May 2026)**

1. Snapshot

What the business does (in plain words): Skipper is India's largest maker of the steel lattice **towers and poles that carry high-voltage power lines** across the country (its "Engineering Products" business). It also builds those power lines end-to-end as a contractor (its "Infrastructure / EPC" business — EPC means engineering, procurement and construction, i.e. it designs, buys the materials and builds the project). A third, smaller arm makes **PVC/CPVC plastic pipes and fittings** for plumbing and water supply (its "Polymer" business). Most of the money comes from selling and erecting transmission towers for utilities like Power Grid Corporation of India.

Measure (FY26, year to Mar-2026)	Figure	Plain-English read
Revenue (consolidated)	Rs 5,553 cr	Total sales for the year — up about 20% on FY25's Rs 4,624 cr. Third straight year of strong growth.
Net profit (PAT)	~Rs 207 cr	Profit left after all costs and tax — up about 42% on FY25's Rs 146 cr. Profit grew roughly twice as fast as sales. (Screener's snapshot shows ~Rs 213 cr; the audited reported figure is ~Rs 207 cr.)
Operating margin (OPM)	~10.3%	Roughly 10 paise of operating profit per rupee of sales — steady, and nudging up each year (was ~9.8% in FY25).
Order book (Mar-2026)	Rs 8,502 cr	Confirmed work in hand — an all-time high, about 1.5x a year's sales, so revenue is largely visible for the next ~1.5–2 years.
Borrowings (Mar-2026)	Rs 948 cr	Debt on the books (net debt-to-equity ~0.58x). It rose in rupee terms as the business scaled, but interest cost as a share of sales kept falling.
Return on capital (ROCE)	~21%	For every Rs 100 of capital in the business it earns ~Rs 21 a year before tax — a healthy, improved level.

2. Concall coverage

This report reads Skipper's earnings calls from **FY24 through FY26** (about 3 years / 11 quarters). The most recent transcripts held on disk run to Q3 FY26 (call of 29-Jan-2026). The **Q4 FY26 / full-year FY26 call (~May 2026)** is the freshest signal here; its transcript file failed to download, so that quarter is built from Skipper's published results and web/press coverage (sources listed in Section 2b).

Quarter	Call date	Source used
Q4 FY24	02-May-2024	Transcript (on disk)
Q4 FY25 / FY25 full year	30-Apr-2025	Transcript (on disk)
Q1 FY26	31-Jul-2025	Transcript (on disk)
Q2 FY26	07-Nov-2025	Transcript (on disk)
Q3 FY26	29-Jan-2026	Transcript (on disk)
Q4 FY26 / FY26 full year	~late-Apr/May-2026 (results 28-Apr-2026)	Web + published results (transcript download had failed)

2b. Latest concall highlights — Q4 FY26 / FY26 full year (~May 2026)

- **Record quarter and record year.** Q4 FY26 (Jan-Mar 2026) revenue was Rs 1,667 cr — the biggest quarter in company history, up about **29%** year-on-year and 22% on the prior quarter. This delivered the ~30% Q4 jump management had promised on the Q3 call. Full-year FY26 revenue landed at **Rs 5,553 cr, up ~20%** — a record, though short of the 25% pledged at the year's start.
- **Profit jumped faster than sales.** Q4 net profit was ~Rs 78 cr, up roughly **63%** year-on-year (from ~Rs 48 cr); full-year net profit was **~Rs 207 cr, up ~42%**. Operating margin improved to **10.4%** in Q4 (Q4 operating profit ~Rs 173 cr) and **10.3%** for the year, continuing the slow climb from ~9.8% a year ago.
- **Order book at a record Rs 8,502 cr.** Confirmed work in hand hit an all-time high — about 1.5x annual sales — split roughly 77% power T&D / 13% other domestic / 10% export. FY26 order inflows were Rs 5,678 cr (up ~6%, another record), the bidding pipeline is ~Rs 33,000 cr, and the year included four 765 kV high-voltage lines commissioned (~940 circuit-km).
- **FY27 guidance dialled DOWN to ~15% revenue growth.** This is the notable new signal: after years of a "20-25%" mantra, management set a deliberately **conservative ~15% top-line target for FY27**, blaming weak Middle-East exports, high sea-freight and slower bidding — while still guiding **~30% profit growth** and further margin gains (toward a 12% long-term goal), and expecting 20-25% growth to **resume from FY28** as exports recover. Capacity goes to 4.5 lakh tonnes by June 2026 (from 3.75 lakh; target 6 lakh by FY28) on a modest ~Rs 250 cr FY27 capex.
- **Exports still the soft spot; new milestones.** Exports stayed ~10% of the book (Middle East weak, freight high); Skipper set up a **wholly-owned Brazil subsidiary** and is chasing North America, Europe, Australia, Africa and LatAm. Engineering milestones: prototyped the **world's heaviest transmission tower (293 tonnes)**, India's first composite insulated cross-arm testing, and a second test-bed. Tone: **confident on structural demand, deliberately cautious on near-term numbers.**

Source note: the Q4 FY26 / FY26 call transcript failed to download, so this quarter is built from Skipper's published results (28-Apr-2026) and web/press coverage — marketsmojo, whalesbook, scanx, tndindia, univest — cross-checked against Screener.in (Q4 FY26 sales Rs 1,667 cr, PAT Rs 78 cr; FY26 revenue Rs 5,553 cr; OPM ~10.3%). The reported FY26 PAT (~Rs 207 cr, +42%) is marginally below Screener's ~Rs 213 cr.

2c. Business mix & capacity (quick facts)

Domestic vs export: Order book (Mar-2026) is roughly **90% domestic / 10% export** (power T&D ~77%, other domestic ~13%, exports ~10%). In plain terms: about nine-tenths of confirmed work is Indian; exports remain small (Middle East soft, freight high) and management's long-run aim of a 50:50 split has slipped further out — still no firm date.

Capacity utilisation: Engineering plants (~3.75 lakh tonnes near Kolkata) run at **>90%** — at/above the "optimum" 85-90% band, so very little headroom on the current base. That is exactly why capacity is being expanded to **4.5 lakh tonnes by June 2026** and ~6 lakh tonnes by FY28 — the extra volume from a fuller, bigger plant is meant to lift margins (operating leverage).

3. Earning-trigger thesis

The one big driver: India is in a multi-year build-out of its power grid — the government/regulator have flagged roughly **Rs 9 lakh crore of transmission investment to 2032** (management cites even higher figures beyond that), driven by connecting ~500 GW of new renewable energy. Skipper is the country's largest transmission-tower maker, is roughly **doubling its factory capacity** (from ~3 lakh tonnes toward ~6 lakh tonnes by FY28), and is **pushing exports** under the "China Plus One" theme (global buyers diversifying away from Chinese suppliers). More towers sold from a bigger, better-utilised plant, plus higher-value EPC and export work, is the engine meant to compound revenue at ~20% a year with slowly rising margins.

Trigger	What management said	Evidence so far	Horizon	Strength
India T&D grid capex super-cycle	Rs 9 lakh cr transmission spend to 2032; 20%+ revenue CAGR; order book to keep rising	Order book climbed from ~Rs 6,200 cr (FY24) to a record Rs 8,502 cr (FY26); revenue +41% FY25, +20% FY26; pipeline ~Rs 33,000 cr	Multi-year (to 2032+)	Strong
Capacity doubling (3.75→6 lakh tonnes)	Two 75,000 t expansions; 4.5 lakh t by Jun-2026, ~6 lakh t by FY28; operating leverage lifts margins	First expansion live; utilisation >90%; margin crept from ~9.7% to 10.3%; profit +42% FY26	To FY28	Strong
Exports (China Plus One)	Aim 50:50 domestic:export order mix; export inflow to double; Brazil/US/UAE subsidiaries	Export revenue Rs 635cr→770cr (FY25) but stalled at ~10% of book; Middle East weak + high freight; FY27 growth cut partly on this	3-5 years	Moderate / softening
Polymer scale-up + margin	Grow pipes toward Rs 1,000 cr brand; reach double-digit margins long-term	Volumes +30-40%; revenue still ~Rs 500-600 cr at low-single-digit margin	2-3 years+	Moderate

4. Management consistency scorecard

The promised-versus-delivered record across the calls read:

Period	What was promised	What actually happened	Verdict
FY24 (May-24)	25% revenue CAGR off a ~Rs 3,300 cr base; keep ~9.7% margin; capacity 3→3.75 lakh t	FY25 revenue Rs 4,624 cr = +41% (beat); margin held ~9.8%; capacity expansion progressed	Delivered
FY25 (Apr-25)	25% revenue growth in FY26; finance cost down to ~4% of sales; margin +50 bps; export inflow to double	FY26 revenue ~+20% (short of 25%, flagged mid-year); finance cost fell to ~4.1%; margin up ~9.8%→10.3%; exports grew but stayed ~10% of book	Partly
Q1-Q2 FY26	Reaffirmed 25% full-year growth; 10-10.5% margin; order intake Rs 6,000 cr+	Q3 cut FY26 guide to ~21-22% (Q1 capacity delay + heavy Rajasthan monsoon); margin held; order book hit record ~Rs 9,000 cr	Partly
Q3 FY26 (Jan-26)	~21-22% FY26 revenue; ~30% jump in Q4; 10%+ margin; 4.5 lakh t capacity by year-end	Q4 FY26 revenue Rs 1,667 cr = ~+29% YoY (delivered the promised Q4 surge); FY26 ~+20%; Q4 OPM 10.4%	Delivered
Q4 FY26 (Apr-26)	New FY27 guide: only ~15% revenue growth (conservative) but ~30% PAT growth + margin gains; 20-25% to resume FY28	Yet to play out — but the top-line target is a clear step down from the long-standing 20-25%, blamed on weak exports/freight/slower bidding	Too early

Narrative drift: For three years the substance of the story stayed remarkably **steady** — same leadership (the Bansal family + a consistent CFO/IR team), same thesis (India grid capex + capacity doubling + exports), and steady delivery on **margins (up to 10.3%), order book (record Rs 8,502 cr), deleveraging and profit (+42% in FY26)**. But the flagship **revenue-growth promise has been walked down two years running**: FY26 was guided at 25%, trimmed mid-year to ~21-22% (a genuine one-off — a Q1 capacity delay plus the heaviest Rajasthan monsoon in decades), and landed at ~20%; then FY27 was guided at just **~15%**. Management is honest about the cause (weak Middle-East exports, high sea-freight, slower bidding) and frames it as deliberately conservative, still promising ~30% profit growth and a return to 20-25% from FY28. Profit and

margins have out-delivered, but the export "50:50" aspiration keeps slipping and the growth rate has genuinely softened — that is real, if honestly-flagged, drift on the headline number.

5. Bottom line — two verdicts

Durable earning trigger? YES

There is a clear, concrete, still-live driver: India's multi-year transmission-grid build-out, and Skipper is the largest domestic tower maker riding it with a capacity that is roughly doubling. The evidence is already on the page — the order book has climbed from ~Rs 6,200 cr to a record Rs 8,502 cr in two years, the bidding pipeline is ~Rs 33,000 cr, revenue rose 41% then 20%, profit is compounding faster than sales (+42% in FY26), margins are edging up (to 10.3%) and debt intensity is falling. The runway (grid spend to 2032 and beyond) is long, and management still guides ~30% profit growth for FY27. Exports and polymer are upside rather than the core; the export leg has actually weakened (Middle East soft, high freight), which is why the FY27 *revenue* guide was cut — but the domestic T&D engine that drives earnings is well proven, so this remains a clear YES.

Management consistent? MAYBE

This is a downgrade from a straight YES, warranted by the freshest call. On the things that actually move earnings, the team has delivered impressively and steadily: record order books quarter after quarter, margins held then improved to 10.3%, finance cost brought down as promised, deleveraging on track, capacity expansion on schedule, and profit up ~42% in FY26 — and the promised strong Q4 was delivered. But the flagship **revenue-growth promise has now been walked down two years in a row**: FY26 was guided at 25%, cut mid-year, and landed at ~20%; FY27 is guided at just ~15%. Each step is honestly explained (monsoon, then weak Middle-East exports and high freight) and framed as conservative, with a promised return to 20-25% from FY28 — this is candour, not spin. Still, a headline growth number that keeps drifting down, plus the perennially deferred 50:50 export aspiration, is exactly the "mixed record / some drift" that separates a MAYBE from a YES. Watch whether FY27 delivers the promised ~30% profit growth and whether growth re-accelerates in FY28 as pledged.

Prepared from Skipper Ltd earnings-call transcripts (Q4 FY24 through Q3 FY26) and Screener.in snapshot financials, plus web/press coverage for the Q4 FY26 / full-year FY26 results (that call's transcript failed to download). Figures in Indian rupees crore (1 cr = 10 million) unless noted. This is a research summary, not investment advice.
