

V-Marc India Ltd — Concall / Earnings Tracker

Wires & cables manufacturer | NSE (SME): VMARCIND | Report date: 5 July 2026

The two questions this report answers: (1) Is there a durable *earning trigger* — a real driver that will keep growing profit? (2) Has *management been consistent* — did they deliver what they promised, and has the story stayed steady?

1. Snapshot

What the business does (one line): V-Marc India makes electrical wires and cables — building wires for homes and offices, and high- and low-tension power cables used by electricity utilities, EPC contractors and infrastructure projects. It earns money by manufacturing these cables and selling them through three channels: government utilities (B2G), businesses/contractors (B2B), and a dealer network to end-customers (B2C).

Number (latest)	Value	Plain-English read
Market capitalisation	₹3,776 crore	The stock market's total price tag for the whole company today.
FY26 revenue (sales)	₹1,797 crore	Total sales for the year to March 2026 — roughly double last year's ₹896 crore (+99%).
FY26 net profit	₹100 crore	What was left as profit after all costs and tax — up ~177% from ₹36 crore last year.
Operating margin (OPM)	11%	Out of every ₹100 of sales, about ₹11 is operating profit before interest, tax and depreciation. Steady for three years.
Return on capital (ROCE)	41.4%	For every ₹100 of capital in the business it earns ~₹41 a year before tax — a very high, efficient number.
Borrowings (FY26)	₹214 crore	Total debt. Debt-to-equity ~0.7x — moderate; the company funds most growth from its own profits.
Stock P/E	37.7	The market pays ~₹38 for every ₹1 of yearly profit — a rich valuation that already assumes strong future growth.

Note: Screener's downloadable tables are standalone figures; the consolidated FY26 figures management reported (revenue ₹1,797 cr, profit ₹100 cr) are effectively the same, so there is no material standalone-vs-consolidated gap this year.

2. Concall coverage

No concall (earnings call) transcripts were available on Screener — this report is based on a global web deep-dive. V-Marc is a small-company (SME) listing and does not publish hosted earnings-call transcripts on Screener. The analysis below draws on the company's official results press release, investor presentation, stock-exchange filings and credible financial media.

★ Latest update highlights — FY26 results (announced ~May 2026)

- **Revenue nearly doubled** to ₹1,797 crore (+99%) — total yearly sales roughly twice last year's, and far above management's own 40-50% growth guidance.
 - **Profit jumped ~177%** to ₹100 crore — after-tax profit almost tripled; profit margin improved by ~1.6 percentage points to 5.6%.
 - **First-ever exports** of ₹63 crore (₹61 crore in the second half) — a brand-new revenue stream; a Mumbai office and export team now target the US, EU, Australia and Japan.
 - **5:1 bonus share issue approved** and authorised capital raised from ₹30 crore to ₹150 crore — a bonus gives existing holders 5 extra shares per share held (no cash), signalling management confidence; the capital increase clears room for future fund-raising/expansion.
 - **Tone: confident and expansionary** — Chairman Vikas Garg flagged "crossing ₹1,800 crore turnover," a new e-beam production line, and India's first e-beam submersible agriculture cable.

Business mix & capacity (quick-glance)

Domestic vs exports: Domestic ~96.5% / Exports ~3.5% of FY26 revenue — almost all sales are still within India; exports only just began this year but are the new growth lever.

Product mix (FY26 standalone): High-tension cables ~47%, Building wires & industrial cables ~38% (up from ~20% a year ago), low-tension cables ~15% — the shift toward building wires (higher-margin, sold via dealers) is the key mix change.

Channel mix: B2B (contractors) ~36%, B2C (dealers) ~36%, B2G (govt utilities) ~25%, exports ~3.5% — dealer network grew to 1,200+ across 24 states (from ~950 across 19 states).

Capacity: ~212,600 circuit-km at end-FY26 (up from 63,000 in FY23). *A specific plant utilization percentage was not disclosed by management; capacity has been rising in step with the ₹500 crore capex plan to FY30, aiming beyond 10 lakh circuit-km.*

★ 3. Earning-trigger thesis (the headline)

V-Marc's earnings driver is a **capacity-plus-distribution flywheel**: it is expanding cable-making capacity aggressively (63,000 → 212,600 circuit-km in three years, targeting 10 lakh+ by FY30 on ₹500 crore of capex), while widening its dealer network (950 → 1,200 dealers) and tilting the mix toward higher-margin building wires and the newly opened export channel. More capacity + more dealers + richer mix is what has already doubled revenue, and management says the same levers drive the next few years.

Trigger	What management said	Evidence so far	Time horizon	Strength
Capacity expansion	₹500 cr capex to FY30; capacity to 10 lakh+ circuit-km	Already 63k→212.6k ckm in 3 yrs; ₹98 cr deployed in FY26	Multi-year (to FY30)	Strong — concrete, funded, already visibly ramping.

Building-wires / B2C dealer push	Grow dealer-led building wires; deepen network	Building wires +273%, now ~38% of sales; dealers 950→1,200	Ongoing	Strong — delivered in real numbers this year.
Exports	Enter US/EU/Australia/Japan; 6-10 expos in FY27	First-ever ₹63 cr exports in FY26 (₹61 cr in H2)	Early (1-3 yrs)	Moderate — genuine start but tiny (~3.5%); unproven at scale.
Backward integration (compounds/conductors)	Support margins via in-house inputs	Margin steady ~11%; not yet expanded	Medium term	Unproven — a margin lever, not yet shown in the numbers.

4. Management consistency scorecard

Consistency here is judged from public results, investor presentations and exchange filings (no earnings-call transcripts exist). Within that limit the track record is checkable year-on-year.

Period	What was promised	What actually happened	Verdict
FY25 (target set FY24-25)	Revenue of ₹750-800 crore for the full year	Delivered ₹896 crore	Delivered (beat)
FY26 (guidance set start of year)	Revenue growth of 40-50%	Grew 99% to ₹1,797 crore	Delivered (far exceeded)
FY26 margin	Hold EBITDA margin ~11-12%	11.2% (up 44 bps)	Delivered
Capacity build-out	Scale capacity steadily via capex	63k→212.6k ckm; ₹98 cr spent in FY26	Delivered (on track)
Exports (new goal)	Begin exporting, build overseas team	First ₹63 cr booked; Mumbai office + team set up	Too-early (started well)
FY27 (new guidance)	40%+ growth; 11-12% margin; ₹500 cr capex to FY30	Not yet due	Too-early

Narrative drift: The story has stayed remarkably steady and simply scaled up — capacity, dealers, product-mix and (now) exports. There is no story-flipping year to year; each year's plan builds logically on the last. Management has set conservative targets and then beaten them two years running, which is the healthy direction of surprise. The main caveats are the *absence of a formal earnings call* to pressure-test claims, the very high stock valuation (P/E ~38) that leaves little room for a stumble, and the export/backward-integration promises still being unproven.

5. Bottom line — two verdicts

Durable earning trigger? → YES

There is a clear, concrete, still-live driver — aggressive capacity expansion feeding a widening dealer network and a richer product mix — and it is already visibly playing out (revenue doubled, profit up ~177%, capacity up 3x in three years). Exports and backward integration add further, if unproven, upside. This is a real growth engine, not a promise on paper.

Management consistent? → YES

Management set achievable targets and beat them in both FY25 (₹896 cr vs a ₹750-800 cr goal) and FY26 (99% vs a 40-50% goal), held margins where they said they would, and kept a single, steady growth story that scales year on year. The one honest caveat: with no earnings-call transcripts available, this consistency is read from press releases and filings rather than live Q&A — so it is a confident YES, tempered by less disclosure than a large company would give.

Prepared 5 July 2026 · No concall transcripts available on Screener — global web deep-dive · Figures rounded; every reader should verify against primary filings before acting. This is research, not investment advice.
