

Yatharth Hospital & Trauma Care Services Ltd

Concall Tracker · earnings-call read-through · ticker YATHARTH · prepared 04 Jul 2026

1. Snapshot

What the business does: Yatharth runs a chain of multi-speciality hospitals concentrated in the Delhi–NCR region (Noida, Greater Noida, Noida Extension, Faridabad, New Delhi, plus Jhansi and Agra in Uttar Pradesh). It earns money by treating patients — both admitted (in-patient/IPD) and walk-in (out-patient/OPD) — and gets paid three ways: cash from self-paying patients, from private health insurance, and from government schemes. It grows by buying or building more hospitals, filling beds (occupancy), and raising the average bill per bed (ARPOB).

₹1,207 cr

FY26 revenue (total sales for the year) — up ~36% on the year, the fastest of any recent year

₹170 cr

FY26 net profit (money left after all costs and tax) — up ~30%

24%

Operating margin (operating profit as a share of sales) — steady, dipped slightly as new hospitals ramp

₹18.2

Earnings per share (profit per share held) in FY26, up from ₹13.6

~₹115 cr net cash

Cash minus debt: it took ~₹230 cr of debt to buy the Agra hospital but still holds more cash than debt

12%

Return on capital employed (profit vs money invested) — down from ~24% because expansion cash is not yet fully earning

Numbers from the company's Screener financials. Six straight years of revenue growth: ₹375 cr (FY22) → ₹478 cr → ₹635 cr → ₹860 cr → ₹1,207 cr (FY26).

2. Concall coverage

Twelve consecutive earnings calls read, oldest to newest — a full **3-year record (Q1 FY24 through Q4 FY26)**. This is a deep, unbroken history, so the consistency read below is well-supported.

Quarter	Call date	Read?	Quarter	Call date	Read?
Q1 FY24	Aug 2023	Yes	Q3 FY25	Jan 2025	Yes
Q2 FY24	Nov 2023	Yes	Q4 FY25	May 2025	Yes
Q3 FY24	Feb 2024	Yes	Q1 FY26	Aug 2025	Yes
Q4 FY24	May 2024	Yes	Q2 FY26	Nov 2025	Yes
Q1 FY25	Aug 2024	Yes	Q3 FY26	Feb 2026	Yes
Q2 FY25	Nov 2024	Yes	Q4 FY26	May 2026	Yes

★ Latest concall highlights — Q4 FY26 (call May 2026)

- **Record results.** Quarter sales ₹341.6 cr, up 47% on the year; full-year FY26 sales ₹1,207 cr, up 36%. Full-year net profit ₹170 cr, up 30%. Plain read: both the top line and profit grew fast, and Q4 was the strongest quarter yet.
- **Margin optically low, underlying strong.** Q4 operating margin 23.4%, but stripping out the losses of the two brand-new hospitals still filling up, the underlying margin was 30.4%. Plain read: the core hospitals are highly profitable; the reported dip is the cost of opening new ones.
- **Big new announcement — Gurugram.** Bought an under-construction premium hospital in Central Gurugram: ~₹100 cr upfront plus ~₹100 cr to fit it out, opening ~April 2027, expected ARPOB above ₹50,000 (a high-value asset near the Delhi airport). Plain read: this seeds a fresh NCR cluster and should carry the highest bill-per-bed in the group.
- **Bed target raised.** Now over 3,200 beds; management aims for **5,000 beds within 3 years, possibly sooner** — roughly a 50%+ increase — funded from its own cash, no new share sale planned.
- **Tone:** highly confident. They expect FY27 growth to *beat* FY26's 36%, and flagged the now-operational Jewar (Noida International) Airport, where Yatharth is the exclusive hospital partner, as a fresh tailwind for foreign patients.

2c. Business mix & capacity

Beds & occupancy: over **3,200 beds** by end-FY26 (up from 1,405 at the 2023 IPO). Occupancy was **68% for FY26 and 71% in Q4** — i.e. roughly seven of every ten beds are filled, leaving clear room to grow before new beds are needed. Mature hospitals run hot (Noida ~86%, Jhansi ~86% in Q4); the three newest units (New Delhi, Faridabad Sector-20, Agra) are still low (32–52%) and are the fill-up opportunity.

ARPOB (average revenue per occupied bed per day): ₹33,124 for FY26, up ~7%. Plain read: each occupied bed earns about ₹33,000 a day; the flagship Noida Extension unit already earns ~₹47,800 on a rich super-specialty/oncology mix.

Payer mix (who pays the bills): government schemes (CGHS/ECHS/ESI etc.) ~**35%**, the rest split roughly evenly between cash self-pay (~32%) and private insurance (~32%). Plain read: about a third of income comes from lower-priced, slow-paying government work — management is deliberately shrinking this toward ~25%. Foreign (medical-travel) patients are still single-digit but growing.

New-vs-mature mix: newer hospitals grew ~110% in FY26 vs ~19% for mature ones, and now contribute ~11% of quarterly revenue — the growth engine is the ramp of recently added beds. This is a hospital chain, so there is no domestic/export split to report.

★ 3. Earning Trigger thesis

The core driver is a **bed-capacity expansion machine**: buy or build hospitals cheaply in and around Delhi-NCR, fill the beds over 2–3 years, and lift the bill-per-bed by pushing high-value specialties (cancer care, transplants, robotic surgery, cardiac). Since the 2023 IPO, beds have more than doubled from 1,405 to 3,200+, with a stated path to 5,000. Layered on top are two margin levers: (1) shifting away from low-priced government work toward cash and insurance, and (2) rising ARPOB as the case-mix richens. What makes the trigger credible is that the earlier vintages have *already* ramped — Jhansi, Noida Extension and the first Faridabad hospital all moved from losses/low occupancy to profitability roughly on schedule.

Trigger	What management said	Evidence so far	Horizon	Strength
Bed expansion (acquire + build)	Double beds; reach 3,000 by FY28, then 5,000 in 3 yrs	1,405 → 3,200+ beds delivered; 3,000 hit ahead of schedule; Agra + Gurugram added	Now – 3 yrs	Strong
Occupancy ramp of new units	New hospitals breakeven in 15–18 months	Jhansi, Noida Ext, 1st Faridabad all ramped; Faridabad turned profit within a year	Ongoing	Strong
ARPOB uplift via super-specialty/oncology	~10%/yr ARPOB growth; ₹40,000 target	₹28,571 (FY24) → ₹33,124 (FY26); Noida Ext ~₹47,800	Ongoing	Strong
Payer-mix shift govt → cash/insurance	Cut government to ~25%	~40% → ~35%; slow but moving in the right direction	2–3 yrs	Moderate
Medical-value travel (Jewar Airport)	Foreign patients to reach double-digit share	Airport now live; still single-digit; some geopolitical wobble	2–3 yrs	Moderate

4. Management Consistency scorecard

Period	What was promised	What actually happened	Verdict
FY24 (from IPO)	One hospital acquisition per year; double beds over 3–4 yrs	Bought Faridabad (Fidelis, 200 beds) FY24; then Model Town Delhi + 2nd Faridabad + Agra + Gurugram — over-delivered on cadence	Delivered
Across all calls	Sustain ~30% revenue growth	FY24 +29%, FY25 +31%, FY26 +36% — met or beat every year	Delivered
FY24–FY26	ARPOB up ~10%/yr; occupancy ramp	ARPOB ₹28.6k → ₹33.1k; occupancy 54% → 68% — both tracked the guidance	Delivered
FY24–FY26	EBITDA margin held ~25–27%	26.8% (FY24) drifted to 24% (FY26) reported, but ~28.5% stripping new-hospital losses — drag was flagged in advance	Partly
New units	Breakeven in 15–18 months	Jhansi & 1st Faridabad delivered (Faridabad profit inside a year); newest 3 on track	Delivered
Every call since FY24	Cut receivable (debtor) days toward ~80–95	Still stuck ~112–124 days; improving slowly but repeatedly missed the promised pace	Partly
FY24 onward	Income-tax search / frozen-account overhang would be resolved	De-escalated across calls (₹250 cr → ~immaterial); assets unfrozen; "final leg" by FY27	Delivered

Narrative drift: the story has been **remarkably steady and, if anything, has scaled up** — the same three-part playbook (add beds → fill beds → raise the bill-per-bed) has run unchanged for three years, with the bed target repeatedly *raised* as earlier targets were hit early. The two soft spots are (1) reported margins drifting down under the weight of opening several hospitals at once (well-telegraphed, not hidden), and (2) stubbornly high receivables tied to slow-paying government schemes — the one promise management keeps making and keeps only partly keeping. A few governance items surfaced along the way (an October-2023 tax search, a one-off promoter share pledge for a family settlement, and promoter

holding falling from ~66% to ~56% via a QIP share sale to fund expansion), all disclosed and explained. Tone has been consistently confident throughout, backed mostly by delivery rather than talk.

5. Bottom line

Durable earning trigger? → YES

There is a clear, concrete and still-live driver: a proven capacity-expansion engine that has already turned 1,405 beds into 3,200+ (heading to 5,000), with each earlier vintage of hospitals ramping to profitability roughly on schedule and ARPOB rising steadily. It is not a promise waiting to be tested — it is visibly playing out in the numbers, with a funded pipeline (Agra live, Gurugram and brownfield beds coming) to extend it. The main risk is execution strain from opening many hospitals at once, which dents reported margins in the near term.

Management consistent? → YES

Across a full 3-year, 12-call record management has largely done what it said: acquisitions delivered on (and ahead of) cadence, ~30% revenue growth met every year, occupancy and ARPOB tracking guidance, and new-hospital breakevens hit on time. The story never changed — it only got bigger as targets were reached early. Two honest caveats keep this a solid rather than flawless YES: reported margins have drifted down as new units drag (openly flagged), and receivable days remain high versus the repeated promise to cut them. Neither undermines a genuinely strong promised-vs-delivered record.
