Adani Total Gas Ltd (ATGL)

Concall tracker, Q2 2027 (Jul-Sep 2026) · City gas distributor (Adani group with TotalEnergies): sells CNG for vehicles and piped gas to homes, shops and factories in its licensed areas, plus EV charging and biogas.

1. Snapshot

Number	Value	Plain read
Market cap	₹64,042 cr	A large company by stock-market value.
Q2 revenue	₹2,102 cr, up 34%	Sales jumped mostly because gas prices rose and were partly passed on.
Q2 operating profit	₹340 cr, up 12%	Profit grew in line with volumes, far slower than revenue.
Q2 net profit	₹167 cr, up 3%	Almost flat: costlier gas and higher interest and depreciation ate the gain.
P/E	104	Investors pay over a hundred years of current profit: very expensive for a utility-like business.
Promoter holding	74.8%	Adani group and TotalEnergies own three-quarters.

2. Concall coverage

Quarter	Date	Transcript read?
Q3 FY21 to Q3 FY24	Feb 2021 to Jan 2024	Skimmed for promises
Q3 FY25	Feb 2025	Yes
Q1 FY26	Jul 2025	Yes
Q2 FY26	Nov 2025	Skimmed
Q3 FY26	Jan 2026	Skimmed
Q4 FY26	5 May 2026	Yes (from NSE; missing on Screener)
Q1 FY27	Jul 2026	Yes
Q2 FY27	23 Oct 2026	Yes, in full ★

About twelve calls over three years; the May 2026 transcript was filled in from the NSE filing.

Latest concall highlights — Q2 FY27 (23 Oct 2026)

- Gas volumes up 12% to 315 million cubic metres; CNG up 17%, piped gas up 3%. New areas now 41% of volume.
- Gas cost up 43% on a year ago (Brent, LNG, weak rupee, less cheap domestic gas, pooled gas support withdrawn). Price hikes passed on only part of it.
- A new long-term gas contract cut spot purchases from about 15% to 7-8% of supply.
- Targeting 80-90 new CNG stations this year (68 last year); 723 stations, 11.8 lakh homes connected. Industrial and commercial connections in H1 already 1.4 times all of FY26.
- EV charging: 5,513 points, far behind the chairman's 2023 target of 75,000 by 2030; now shifting to group trucking customers.

Business mix & capacity

- Domestic vs export: 100% domestic. CNG is about 70% of volume, piped gas about 30%.
- Capacity: not a utilisation business; growth comes from laying pipeline and adding stations.

3. Earning trigger thesis

Volumes grow steadily as the network spreads into new areas, but profit depends on the gap between gas cost and selling price, which the company doesn't control. Right now that gap has narrowed. Management offers no new driver beyond more stations and more connections, and the EV and biogas side businesses are small.

Trigger	What management said	Evidence so far	Time horizon	Strength
Network expansion	80-90 CNG stations this year	On track: 21 added in H1, about 70 under construction	Ongoing	Moderate: steady, not a step-change
Margin recovery	Gas cost spikes are temporary	Margin about 16% vs 23%+ years ago	Unclear	Weak
EV charging	75,000 points by 2030 (2023)	5,513 installed	2030	Weak: far off target
Biogas (CBG)	Government scheme support	Early	Years	Unproven

3b. Trigger check

Trigger type	Yes/ No	What was said (date)
Debt cut	No	Not discussed.
New business	No	EV charging and biogas are existing side businesses, still small.
Margin up	No	Gas costs up 43%, margins down (Oct 2026).
New management	Yes	Sanjay Pandita leads calls as CEO from mid-2026; Suresh Manglani was ED and CEO until May 2026.
New capacity	Yes	80-90 CNG stations targeted this year vs 68 last year (Oct 2026).
Big orders	No	Not applicable.
Turnaround	No	Not applicable.
Promoter buying	No	Promoter stake flat.

The single concrete driver: No step-change driver: steady growth in CNG stations and gas connections, with profit at the mercy of gas prices.

3c. Margin bridge

Operating margin is about 16-17% against over 23% a few years ago. Gas cost jumped 43% on costlier Brent and LNG, a weaker rupee and less cheap domestic gas, and the company chose to pass on only part of it. Management calls it temporary (one-off), but it has drifted down for years.

3d. Management changes

CEO changed: Suresh P. Manglani (ED and CEO) led calls up to May 2026; Sanjay Pandita has been CEO on the July and October 2026 calls. The calls didn't discuss his background or what he will change.

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict

2023	75,000 EV charging points by 2030	5,513 by Sept 2026	Missed (so far)
FY26	Keep adding CNG stations	68 added in FY26	Delivered
Jul 2026	Volume growth continues at similar pace	Q2 volumes up 12%	Delivered
2025-26	Protect margins via sourcing	Margins down; long-term contract signed	Partly

The core story (lay pipe, add stations, grow volume) is steady and delivered. The big side promises, especially EV charging, are way behind. Margins keep getting blamed on temporary gas shocks.

5. Bottom line

Durable earning trigger? → NO

Volumes grow, but nothing points to a step-up in profit, and margins are squeezed by gas costs it doesn't control.

Management consistent? → MAYBE

Delivers on stations and volumes, misses badly on EV charging, and a CEO change came in mid-2026 with little explanation on the calls.

6. Checkpoints for next quarter

- Margin recovers as price hikes and the long-term gas contract kick in
- CNG station additions stay on track for the full-year target
- Profit growth catches up with volume growth
