Gujarat Ambuja Exports Ltd

Concall Tracker · Q2 2027 (quarter ended 30 Sep 2026) · NSE: GAEL · BSE: 524226 · written 6 Nov 2026 · builds on our Q1-2027 report · NO-CONCALL PATH

This is not investment advice. Do your own due diligence.

1. Snapshot

What the business does: GAEL is India's largest maize processor. It wet-mills corn (soaks and grinds it to split it into parts) into starch and a family of sweeteners and derivatives: liquid glucose, dextrose, sorbitol, maltodextrin, and now sodium gluconate made by fermentation. Buyers are food, drink, pharma, paper, textile, construction and feed companies. A second, thinner business crushes oilseeds for edible oil and meal. It makes its money on the spread between what the grain or seed costs and what the products sell for.

Measure	Value	What it means in plain words
Market cap	₹6,884 cr	What the company is worth on the market today, down from about ₹8,300 cr at our last report.
Q2 FY27 revenue	₹1,451 cr	Down 2% on a year ago and 9% on June. Sales shrank because the oil business shrank.
Q2 FY27 net profit	₹132 cr	Three and a half times last year's ₹38 cr, but down a quarter from June's record ₹177 cr.
H1 FY27 net profit	₹309 cr	Six months of profit already beat the whole of FY26 (₹305 cr).
Q2 operating margin	14%	₹14 of operating profit per ₹100 of sales, against 5% a year ago and 15% in June. Still near the top of its range.
P/E (Screener)	~13	Investors pay about ₹13 for each ₹1 of trailing profit. Cheap if these margins hold, fair if they don't.
Credit rating	Crisil AA/ Stable	Upgraded from AA- on 28 Oct 2026. A lender's vote that the balance sheet got stronger.

Standalone figures, as the company reports them; segment data is consolidated. The two are within a rounding gap.

2. Coverage

No concall transcripts were available on Screener — this report is based on a global web deep-dive. GAEL has still never held an earnings call; Screener's page shows no concall entries as of 6 Nov 2026. What's new is that the company attached a **23-slide investor presentation** to its Q2 results. That's the first one we've seen from GAEL, and it includes a short chairman's note and the capacity roadmap. Still no Q&A, so nobody could ask about anything in it.

Sources used: (1) Q2 FY27 results filing to BSE/NSE, 24 Oct 2026, with standalone and consolidated results, segment tables and the investor presentation (read in full); (2) Crisil rating upgrade disclosure, 29 Oct 2026; (3) Screener.in financial tables and filing list; (4) our Q1-2027 report for the backstory (CARE Dec 2025 and Crisil Aug 2025 rationales, plant commissioning filings, Q1 FY27 results).

★ Latest update highlights — Q2 FY27 (results filed 24 Oct 2026)

- **Second-best quarter ever, below the first.** Profit ₹132 cr against ₹38 cr a year ago, but down from ₹177 cr in June. Half-year profit ₹309 cr against ₹103 cr.

- **Maize did all of it again.** Maize revenue ₹1,212 cr against ₹755 cr a year ago (+60%), segment profit ₹168 cr against ₹7 cr. That's a 13.9% margin against under 1% a year ago, but down from 17.6% in June. The spread is still wide; it narrowed a bit.
- **Oil business nearly vanished.** Other agro revenue fell to ₹196 cr from ₹713 cr a year ago and ₹484 cr in June, with almost no profit (₹3.4 cr). No reason given. This is why total sales fell.
- **Big stock build.** Inventories rose by about ₹278 cr in the quarter. Could be cheap maize bought ahead, but working capital was already stretched, so it's worth watching.
- **Segment numbers restated.** The company changed how it allocates costs to segments and restated past figures. Small, but it makes old-vs-new margin comparisons a bit softer.
- **Chairman's message:** credits the "steady shift towards value-added products", says growth stays self-funded. No guidance for the year.

Business mix & capacity

Mix: maize was 84% of Q2 revenue (₹1,212 cr of ₹1,451 cr), up from 51% a year ago and 68% in June, because the oil side shrank. **Exports:** the company says it serves 120+ countries but still doesn't break out an export share. The last figure we have is ~26% of revenue in FY25. Read: mostly a domestic business.

Capacity: maize grinding now stated at 5,600 tonnes/day (up from ~5,200 at our last report), plus 4,500 tonnes/day of seed crushing and 30,000 tonnes/year of fermentation. GAEL doesn't publish utilisation; the last rating-agency estimate was 82-90%. **Roadmap:** Himmatnagar 900 tonnes/day "by 2027", a proposed 850 tonnes/day plant at Hubli, 9,000 tonnes/day by 2030 (announced at the AGM), fermentation to 120,000 tonnes/year by calendar 2028.

★ Since our last report

Builds on the Q1-2027 report (3 Aug 2026, covering Q1 FY27 results filed 31 Jul 2026). Prior verdicts: trigger **MAYBE**, management **MAYBE**.

Prior read	What we said then	What the new quarter shows	Movement
Trigger: MAYBE	Real capex plan, but profit is a crush-spread swing	Maize margin still high but off the peak; oil side collapsed. Value-added volumes still not broken out	Unchanged
Management: MAYBE	Builds plants well, discloses poorly	First investor presentation, roadmap in writing. Still no call	Improving (slightly)
Is the maize margin sustainable?	17.6% in Q1 looked like a spread peak	13.9% in Q2. Narrowing, still far above the 1-5% of a year ago	Slipping (as expected)
Himmatnagar 900 tonnes/day	Slipped from FY26 to FY27 or later	Now "by 2027" (calendar), i.e. likely into FY28	Slipping
Working capital stretch	Cash cycle up to 96 days	Inventory up ~₹278 cr in one quarter	Slipping
Balance sheet	Net cash, self-funded	Crisil upgrade to AA/Stable	Confirmed

Verdict change: both unchanged. The quarter neither proved the value-added story nor broke it.

3. Earning-trigger thesis

The company's own story: go "from commodities to chemistry". Grind more maize (5,600 → 9,000 tonnes/day by 2030) and turn more of it into higher-value products like sodium gluconate, maltodextrin and sorbitol, all paid for from its own cash. The plants are real and some are running. But the profit jump of the last three quarters still looks mostly like the maize spread: corn got cheaper while starch prices held. The chairman credits value-added products; the company still doesn't show how much of the maize profit comes from them, so we can't check. This quarter the maize margin came down a few points, which is what you'd expect if the spread is normalising.

Trigger	What the company says	Evidence so far	Horizon	Strength	Change since last report
Maize capacity expansion	Himmatnagar by 2027, Hubli proposed, 9,000 tonnes/day by 2030	5,600 tonnes/day now; Himmatnagar not yet built	1-4 yrs	Moderate	↓ date slipped again, target bigger
Value-added / fermentation	120,000 tonnes/year by CY2028	30,000 tonnes/year gluconate running; maltodextrin tripled. Not broken out in results	2-4 yrs	Moderate	unchanged
Maize crush spread	Not discussed directly	Margin ~1% → 17.6% → 13.9% over a year	1-4 qtrs	Strong now, fading	↓ off the peak
Oil / agro processing	Nothing said	Revenue down by more than half on the quarter, near-zero profit	—	Weak	↓ collapsed
Balance sheet	Self-funded, near debt-free	Crisil upgrade to AA	Ongoing	Strong	↑ upgrade

4. Management consistency scorecard

No transcripts exist. Promises below come from annual reports, filings, rating-agency rationales and now the investor deck. Treat this read as directional.

Period	Promised / stated	What happened	Verdict
FY24 (carried forward)	Exports as a structural growth leg	Fell from 36% to 26% of sales in FY25; never explained, still not disclosed	Missed
FY24 → FY25 (carried forward)	Sitarganj expansion	Commissioned Mar 2025, bigger than promised	Delivered
FY25 → now	6,000 tonnes/day by FY26 via Himmatnagar	Moved to FY27, now "by 2027"; still no commissioning	Missed / slipping
FY24 → FY26 (carried forward)	Grain ethanol plant at Malda	Shelved after clearance; not in the new deck at all	Dropped
FY25 → FY26	Commodities to chemistry: gluconate, maltodextrin, sorbitol	Plants built on time; now 120,000 tonnes/year by CY2028 in writing	Delivered (on build)
Ongoing	Self-funded, near debt-free	Held; Crisil upgrade Oct 2026	Delivered

Narrative drift: The direction is steady and the plants keep getting built. What drifts is the dates and the numbers. Himmatnagar has slipped twice. The new deck itself gives three different future capacity totals on different slides (6,500, 7,350 and 9,000 tonnes/day), which reads like a roadmap that's still being written. The oil business halving in

a quarter got no comment. The investor presentation is a real step up in disclosure, and it's to their credit. But a deck isn't a call: nobody got to ask why the oil side collapsed, what the stock build is for, or how much of the maize profit is value-added versus a cheap-corn windfall.

5. Bottom line — two verdicts

Durable earning trigger? → MAYBE vs last quarter: unchanged

Nothing moved it decisively. The maize margin held well above last year's but came off June's peak, which fits the view that the profit surge is mostly a spread that will normalise. The value-added programme is real and now has firm targets on paper, but the company still doesn't show its numbers separately, so it can't be proven from the results. The oil business shrinking sharply adds a new question. H1 profit already beating all of FY26 is great, but it's the cheap-corn spread doing most of the work.

Management consistent? → MAYBE vs last quarter: unchanged (disclosure slightly better)

They build what they control, and the Crisil upgrade backs the balance-sheet discipline. The first investor deck is welcome. Against that, Himmatnagar slipped again, the deck's own capacity targets don't agree with each other, and there's still no call where anyone can press them. Same split as last quarter: good on execution, loose on dates and disclosure.
