Uniparts India Ltd

Concall-tracker report · Q1 FY27 (Apr-Jun 2026) · Screener ticker UNIPARTS · **15 calls: 14 carried forward + 1 new** · builds on the Q4-2026 report

1. Snapshot

Uniparts makes metal parts for tractors and construction machines: three-point-linkage systems (the arms that hook a plough to the back of a tractor) and precision-machined pins and bushings. Its customers are the big global equipment makers, including the top 5 farm and top 3 construction OEMs, plus the US farm-store aftermarket. About 86% of sales are exports, so it rides the US and European machinery cycle.

Figure (group, from the call)	Value	Plain read
Q1 FY27 sales	Rs 347 cr	Up 27% on last year and a touch above the strong March quarter.
Q1 FY27 operating profit (EBITDA)	Rs 90 cr, ~25% margin	Up 55% on the year. A record margin: a quarter of every rupee of sales is operating profit.
Q1 FY27 net profit	Rs 57 cr	Up 64% on the year and 11% on the quarter.
Trailing 12-month EPS	Rs 39.97	Profit per share over the last year, up from Rs 35 at March.
Net cash	about Rs 190 cr	No debt, and cash is back to where it was before last October's special dividend.
ROCE / ROE (trailing)	27%+ / 20%	High returns on the money in the business.

2. Concall coverage

Quarter	Date	Transcript read?
Q3 FY23 → Q3 FY26 (13 calls)	Feb 2023 → Feb 2026	Carried forward from Q4-2026 report
Q4 FY26 (prior boundary)	26 May 2026	Read in prior report
Q1 FY27	5 Aug 2026	Newly deep-read in full ★

Only the Q1 FY27 call was read in full this quarter. The 3.5-year backstory comes from the prior report.

★ Latest concall highlights · Q1 FY27 (call held 5 Aug 2026)

- **Results:** sales +27%, EBITDA +55%, profit +64% on the year, with a margin of about 25%. Read: higher volumes spread fixed costs and more sales went through high-margin warehouses (about 56% of sales vs 50-52% a year ago).
- **Guidance raised:** FY27 growth will be "a couple of percentage points" above FY26's 21%, and the chairman said they expect to improve on earlier guidance. Q2 should be in line with Q1, second half better. Read: the first upgrade in a long time.
- **Where the growth is:** construction is now 45% of revenue and growing on US data-centre and factory build-outs and European infrastructure. Large farm equipment is still shrinking (an industry fall of about 15% expected this year), so Uniparts' growth there comes only from new contracts it won.
- **New business:** trailing 12-month new orders above Rs 225 cr, split about evenly between US and Europe and between farm and construction. A new fabrication line should become "meaningful" in 18-24 months.
- **Still open:** no acquisition yet (about six targets under close watch). Aftermarket flat in rupees, now just 12% of sales, hit by tariff-driven price swings. Mexico warehouse: first customer deliveries now expected in Q3 FY27.

Business mix & capacity. India about 14% of sales, exports about 86% (North America the largest). By channel in Q1: warehouse sales ~56%, made-and-sold locally ~22%, the rest direct exports. Read: almost all export, with the highest-margin channel growing. Capacity utilisation isn't disclosed. Capex stays at 2.5-3.5% of sales, Rs 12 cr this quarter, so there's room to grow output without big spending.

★ Since our last report

Builds on the Q4-2026 report (call 26 May 2026). Prior verdicts: trigger **MAYBE**, consistency **MAYBE**.

Prior read	What we said then	What the new call shows	Movement
Trigger: cycle recovery + new-business wins	Real, but a cyclical bounce; durable part unproven	Growth guide raised; large-farm growth now comes from new contracts despite a falling market; FY28 set up for a second leg as farm recovers	Improving
Consistency	Honest, beat FY26, but missed guidance in the downturn and no acquisition	Delivered the Q1 it guided; still no acquisition	On-track
Promise: FY27 growth "in line with FY26"	Too early	Q1 +27%, guide lifted above FY26	Confirmed
Promise: Mexico warehouse ramp	Live Oct 2025, customers ramping	First customer deliveries now "expected in Q3" FY27; FY27 revenue only mid-single-digit $ million	Slipping
Promise: acquisition / third platform	Not done after 3+ years	Still none; ~6 targets being studied; organic fabrication line as a stopgap	Slipping
Ludhiana fire rebuild	Due by year-end, insured	On schedule, no supply disruption	On-track

Verdict change: trigger upgraded from MAYBE to YES because the recovery is now showing in record margins and a raised guide, and new-contract wins are lifting sales even in the farm segment that's still falling. Consistency unchanged at MAYBE.

3. Earning-trigger thesis

★ The trigger: construction recovery now, farm recovery next, new contracts on top

Management's story has two legs. Construction equipment is growing now and should keep going through FY28. Farm equipment, the bigger worry, is at its bottom this year: small tractors should pick up in calendar 2027 and large ones after. Meanwhile Uniparts keeps winning new contracts, especially big-tractor linkages where it has only a single-digit share. That's why it grew even where the market shrank. Because more sales go through its own warehouses and fixed costs get spread wider, profit is rising much faster than sales. The catch is that it's still a cyclical business, and the extra leg it has talked about for years, an acquisition, hasn't shown up.

Trigger	What management said	Evidence so far	Time horizon	Strength	Change since last report
Construction cycle	Multi-quarter momentum from US and Europe spending	Now 45% of revenue, growing strongly	FY27-FY28	Strong	↑ faster than they expected at year start
Farm cycle recovery	Large-ag trough in 2026; small-ag recovery in CY27	Not yet in the market numbers	FY28	Moderate	unchanged

New-business wins	Above Rs 225 cr trailing; large-ag share gains in Europe	Large-ag sales growing despite a shrinking market	1-3 years	Moderate-to-Strong	↑ now visible in P&L
Channel mix / operating leverage	Warehouse sales 52-56%; 20%+ margin in FY27	Q1 margin ~25%, record	Near-term	Strong	↑
Acquisition / fabrication	~6 targets; fabrication meaningful in 18-24 months	Nothing closed	Unclear	Weak	unchanged

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
FY23 (post-IPO)	~16% medium-term growth, 20%+ margin	Sales fell 8 quarters, margin sank to 14-18%	Missed
FY24	Mid-teens FY25 growth	Walked back, flat to down	Missed
FY25	Q3 FY25 is the trough	It was	Delivered
FY26	Mid-teens growth	21% growth, 22% margin	Delivered / beat
Q1 FY27	Q1 in line with guide; FY27 like FY26	Q1 +27%; FY27 guide lifted	Delivered
Mexico	Warehouse live Oct 2025	First customer deliveries pushed to Q3 FY27	Partly
Since IPO	Acquisition to add a third platform	About a dozen targets, none closed	Dropped / not delivered

Narrative drift: the strategy hasn't moved: diversified off-highway supplier, new-contract wins, near-shore warehouses, net cash, steady payouts. The tone has gone from defensive to confident, and this time the numbers back it. Management was candid that the acquisition has dragged on, and it isn't forcing one. The record is now two good guidance calls in a row after two bad years.

5. Bottom line: two verdicts

Durable earning trigger? → YES vs last quarter: upgraded
What moved it: the growth guide went up, margin hit a record, and new contracts are lifting sales even in the farm segment that's still shrinking. With construction growing and farm likely to turn in FY28, there's visible earnings growth for two years. It's still a cyclical yes. A global machinery slowdown or tariffs could reverse it, and the acquisition leg is missing.

Management consistent? → MAYBE vs last quarter: unchanged
They delivered the quarter they guided and raised the year, which helps. But the acquisition promised since the IPO is still undone, the Mexico ramp has slipped a few quarters, and the downturn-era misses are recent history. Getting better, not yet a clean YES.
