IKIO Technologies Ltd

Concall Tracker · Q2 2027 · first report (Q2 FY27 transcript not yet filed)

1. Snapshot

Noida contract manufacturer (formerly IKIO Lighting) that designs and makes LED lights for brands, and is moving into earbuds and wearables, refrigeration and commercial lighting, automotive lights, solar and electronic parts for Indian and overseas customers.

Number	Value	What it means
Market cap	Rs 1,516 cr	What the market values the whole company at.
FY26 revenue (consolidated)	Rs 595 cr	Full-year sales, up 23% after a flat FY25.
FY26 EBITDA margin	About 13%	Operating profit per Rs 100 of sales, back up from about 12% but well below the 20%+ it earned before its 2023 IPO.
Q1 FY27 revenue (consolidated)	Rs 169 cr	Up 41% on a year ago; EBITDA margin 13%.
Q2 FY27 standalone sales	Rs 67 cr	Screener's standalone line, up 37% on a year ago; the consolidated figure and call are not out yet.
Stock P/E	About 98x	A very rich price for a business whose margins are still recovering.

2. Concall coverage

Quarter	Date	Transcript read?
Q2 FY25	11 Nov 2024	Yes (key passages)
Q3 FY25	10 Feb 2025	Yes (key passages)
Q4 FY25	14 May 2025	Yes (key passages)
Q1 FY26	4 Aug 2025	Yes (key passages)
Q2 FY26	10 Nov 2025	Yes (key passages)
Q3 FY26	2 Feb 2026	Yes
Q4 FY26	4 May 2026	Yes
Q1 FY27	11 Aug 2026	Yes, read in full
Q2 FY27	6 Nov 2026	Not yet: call held, transcript not filed with NSE as of 11 Nov 2026

Eight calls across two years. The Q2 FY27 call happened on 6 Nov 2026 but its transcript wasn't on Screener, NSE or the company site yet, so this first report runs to the Q1 FY27 call.

Latest concall highlights: Q1 FY27 (call held 11 Aug 2026)

- Revenue Rs 169 cr, up 41%. The non-home-lighting businesses grew 53% to Rs 124 cr; the old home-lighting ODM work for its biggest client grew 16% to Rs 45 cr.
- EBITDA Rs 22 cr, margin 13% against 9.4% a year ago. Gross margin slipped from about 44-45% to 41% because component lead times have stretched, as in COVID, and parts cost more.
- Block 2 of the new Noida plant (about 2 lakh sq ft) partly started in Q2 FY27, about 60% of it for earbuds and wearables. Block 3 construction is on plan.
- Revenue guide for FY27 held at about 18-20% growth even though the first quarter ran far ahead. Earbuds and wearables are about 15-17% of sales.
- Management sees full plant use, worth about Rs 1,500 cr of sales, in three to three and a half years, with EBITDA margins of about 17-18% at scale.

Business mix & capacity

Domestic vs export: FY26 revenue from outside India Rs 110 cr, about 18% of sales, with the Middle East growing while the US slowed on tariffs.

Capacity use: Management won't give a single utilisation figure. In Nov 2025 it said the new plant was under 20% used. Block 2 is only now starting.

3. Earning Trigger thesis

The trigger is the move away from one big home-lighting client into earbuds, wearables, refrigeration, automotive and commercial lighting, filling the IPO-funded Noida plant. It's showing: the new lines now make up most of sales and margins have climbed back for five quarters. The catch is that the plant came a year and a half late and margins still sit well below the old levels.

Trigger	What management said	Evidence so far	Time horizon	Strength
Diversified product lines	Other businesses keep growing at about 40%	Up 53% in Q1 FY27; now about three quarters of sales	Ongoing	Strong
Margin recovery	Front-loaded costs will normalise with scale	EBITDA margin from about 5% in Q4 FY25 to 13-16% now	2-3 years to 17-18%	Moderate: component costs are biting
Noida Block 2 and 3	Block 2 ready by March 2025	Partly started only in Q2 FY27	FY27-FY28	Moderate: late

3b. Trigger check

Trigger type	Yes/ No	What was said (date)
Debt cut	No	
New business	Yes	Earbuds, wearables, automotive lighting and Honeywell ODM work are the growth engine; other businesses up 53% (11 Aug 2026)
Margin up	Yes	EBITDA margin up to 13% from 9.4% a year ago on operating leverage (11 Aug 2026)
New management	No	
New capacity	Yes	Block 2 of the Noida plant partly commercialised in Q2 FY27; Block 3 under construction (11 Aug 2026)
Big orders	No	Management says it has no order book
Turnaround	No	
Promoter buying	No	

The single concrete driver: New product lines, led by earbuds, wearables and automotive lighting, filling the new Noida plant blocks.

3c. Margin bridge

EBITDA margin is about 13% against 9.4% a year ago and about 5% in Q4 FY25. It rose as the new lines scaled up and the start-up costs of the new plant and product teams got spread over more sales. Gross margin slipped this quarter on longer component lead times. Management calls the operating-leverage gain lasting and the component squeeze temporary. (lasting)

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
Nov 2024	Block II complete by March 2025	Partly commercialised only in Q2 FY27	Missed
			Delivered

Period	What was promised	What actually happened	Verdict
Nov 2024-Aug 2025	Margins recover as new lines and plant mature	EBITDA margin climbed every quarter from Q4 FY25 to about 16% in Q4 FY26	
May 2025	Guidance to come by Q2 FY26	Kept deferring until it finally gave one in May 2026	Partly
May 2026	FY27 revenue growth about 18-20%	Q1 FY27 up 41%	Too-early

Narrative drift: The diversification story has been steady since the 2023 IPO. Dates have not: the new plant ran about a year and a half late, and guidance was put off for a year before it was given. The tone has gone from defending falling margins to showing them recover.

5. Bottom line

Durable earning trigger? → YES

The new lines are already most of the business and margins are recovering in the reported numbers, with fresh capacity just starting.

Management consistent? → MAYBE

The strategy has held, but the plant was badly late and guidance was dodged for a long time. The conservative FY27 guide is easy to beat, which is better than the reverse.

6. Checkpoints for next quarter

- Q2 FY27 transcript confirms Block 2 production is ramping
- EBITDA margin holds near this quarter's level despite component costs
- Other businesses keep growing faster than home lighting
