Tempsens Instruments (India) Ltd (TEMPSENS)

Concall tracker, Q2 2027 (Jul-Sep 2026) · Udaipur maker of industrial temperature sensors, high-temperature cables and electric heaters for steel, power, oil and gas and glass plants, sold in India and over 80 countries.

1. Snapshot

Number	Value	Plain read
Market cap	₹4,505 cr	A small company by stock-market value, listed in 2026.
Q2 sales	₹116 cr, up 20%	Growing steadily, a bit slower than the 33% of Q1.
Q2 operating margin	19%	High for an industrial supplier, a sign of engineered, made-to-order products, but a little lower than last year.
Q2 net profit	₹16 cr	Helped by a lower tax rate this quarter.
P/E	68.6	Investors pay a lot for future growth.
FY26 base	Revenue ₹445 cr, EBITDA ₹113 cr	Grew about 27% a year from FY24 to FY26.

2. Concall coverage

Quarter	Date	Transcript read?
Q1 FY27	17 Sep 2026	Yes, in full (first call after listing)
Q2 FY27	—	No call held or transcript not yet published; Q2 read from reported numbers

Only one concall exists so far. There's no history to judge consistency against, so that verdict is provisional.

Latest concall highlights — Q1 FY27 (17 Sep 2026), plus Q2 results

- Q1 revenue up 33% to ₹118 cr; exports up 78% to about a third of sales, partly from acquired German and Polish units. Q2 sales then grew 20%.
- Guidance: FY27 growth in line with the last three years (about 27% a year), margins similar to last year.
- Four new plants between Q4 FY27 and Q3 FY28 (Victura JV automotive heating cables, OEM sensor plant, medium-voltage heater plant, new cable unit) with combined peak revenue potential of about ₹500 cr, more than last year's total sales.
- New EDGE pyrometers with Micro-Epsilon ship from Q3; five-year furnace supply contract with a life sciences OEM.
- IPO money used to repay ₹55 cr of ₹78 cr borrowings.

Business mix & capacity

- Domestic vs export: about two-thirds domestic, one-third export (Q1 FY27).
- Capacity: not stated; four new plants announced, peak potential about ₹500 cr at full use.

3. Earning trigger thesis

Tempsens sells the sensors, cables and heaters that go into furnaces and reactors, made to order and hard to replace once qualified. The step-up comes from selling to equipment makers (OEMs) at scale and from

four new plants due between early and late 2027 that could more than double capacity. Electric heaters replacing fuel-fired ones is the long-term story.

Trigger	What management said	Evidence so far	Time horizon	Strength
Four new plants	Peak potential about ₹500 cr	Land bought, construction started	Q4 FY27 to Q3 FY28	Unproven: not built yet
OEM supply	More than 25% of revenue from FY28	Fuel cell, automotive and lab furnace contracts signed	FY28	Moderate
Medium-voltage heaters	Certification by Q4 FY27	Tested, not certified	FY28+	Unproven
Exports	Growing about 46% a year FY24-26	A third of Q1 sales	Ongoing	Moderate

3b. Trigger check

Trigger type	Yes/ No	What was said (date)
Debt cut	Yes	₹55 cr of IPO money used to repay borrowings (Sep 2026).
New business	Yes	Victura JV for automotive heating cables; medium-voltage heaters; cable harnesses (Sep 2026).
Margin up	No	Margin down on hiring and acquisitions (Sep 2026).
New management	No	No change.
New capacity	Yes	Four plants commissioning Q4 FY27 to Q3 FY28 (Sep 2026).
Big orders	Yes	Five-year supply contract with a life sciences OEM (Sep 2026).
Turnaround	No	Not applicable.
Promoter buying	No	Not discussed.

The single concrete driver: Four new plants coming up between early and late 2027, aimed at OEM customers and electric process heating, with combined potential above last year's sales.

3c. Margin bridge

Margin dipped from about 25% to 22% in Q1 and 19% in Q2 as headcount and pay rose about 45% and newly bought European units added costs before revenue. Management expects margins similar to last year as these investments pay back (one-off).

4. Management consistency scorecard

Period	What was promised	What actually happened	Verdict
Sep 2026	FY27 growth in line with ~27% three-year rate	Q1 up 33%, Q2 up 20%	Too-early
Sep 2026	Margins similar to last year	Q2 at about 19% vs low 20s	Too-early
Sep 2026	EDGE pyrometers ship in Q3	Due	Too-early

Only one call, so there's no drift to judge. Management was clear and careful, calling plant revenue 'potential, not guidance'.

5. Bottom line

Durable earning trigger? → MAYBE

The plants and OEM contracts are concrete, but none of it shows in results until 2027-28.

Management consistent? → MAYBE

Too early: one call and nothing yet to score. Q2 growth came in a little under the guided pace.

6. Checkpoints for next quarter

- New EDGE pyrometers start shipping in Q3
- Victura JV plant starts production by Q4 FY27
- Margin holds near last year's level
